

Supergroup 2 – London Suburbs (4.7% of the UK population)

The members of this supergroup are all located in Outer London except Slough and Luton. This supergroup comprises of only one group (containing two subgroups). Redbridge is the most typical local authority district (LAD) in this supergroup and Waltham Forest is the least typical. In this supergroup:

The variables with a proportion far below the national average are ¹

- women who work part time
- household spaces which are detached
- people who are aged 45 to 64
- households with two adults and no dependent children.

The variables with a proportion close to the national average are ²

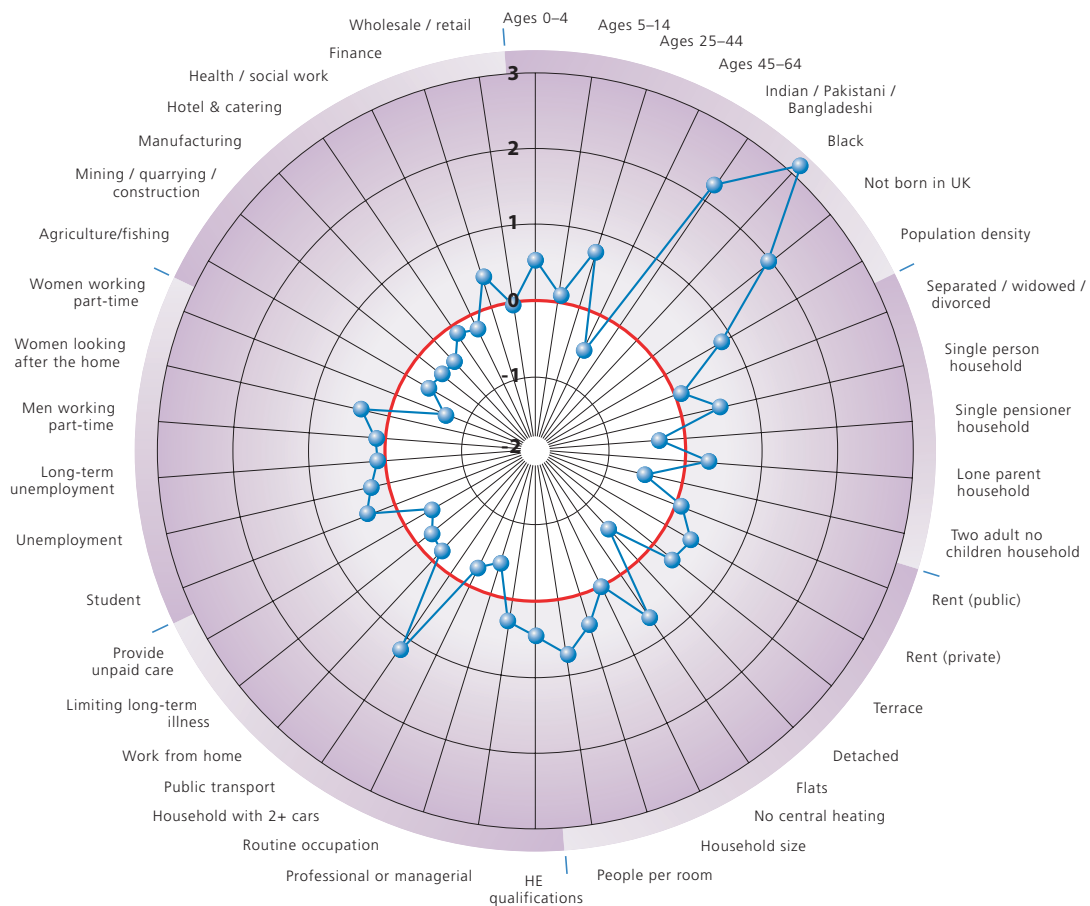

- household spaces without central heating
- household spaces rented from the public sector.

The variables with a proportion far above the national average are ³

- people who are aged 0 to 4
- household spaces which are flats
- people who are aged 25 to 44
- average number of people per room
- population density
- people who travel to work using public transport
- people who are not born in the UK
- people identifying as Indian, Pakistani or Bangladeshi
- people identifying as black.

London Suburbs

Range-standardised difference from the **UK mean**. Positive values show an above average level of the population and negative values show a below average level of the population

1. For a variable to be 'far below average' it must have a difference of more than 0.5 below the UK mean.
2. For a variable to be 'close to the average' it must have a difference less than 0.05 either above or below the mean.
3. For a variable to be 'far above average' it must have a difference of more than 0.5 above the UK mean.

Group 2.4 – London Suburbs (4.7% of the UK population)

The members of this group are located in Outer London plus Luton and Slough. Redbridge is the most typical LAD in this group and Waltham Forest the least typical. In this group:

The variables with a proportion far below the national average are¹

- women who work part time
- household spaces which are detached
- people who are aged 45 to 64
- households with two adults and no dependent children.

The variables with a proportion close to the national average are²

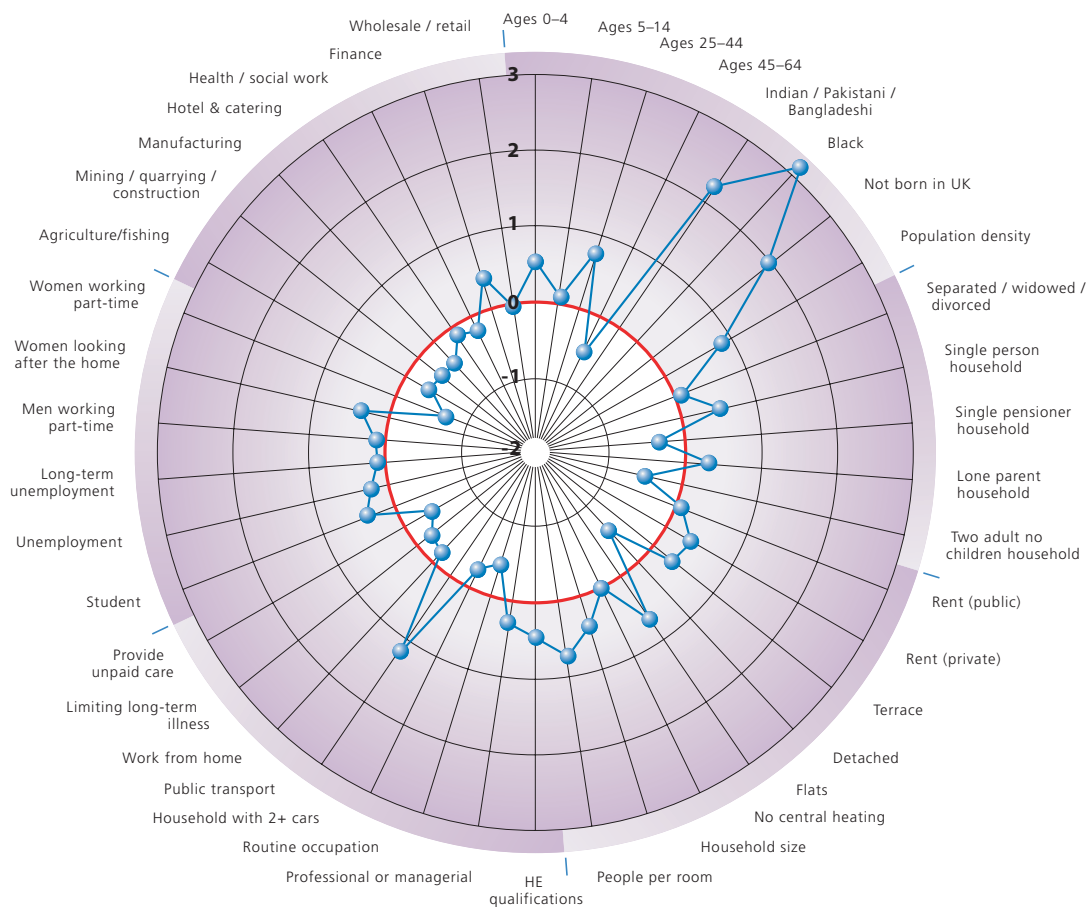

- household spaces without central heating
- household spaces rented from the public sector.

The variables with a proportion far above the national average are³

- people who are aged 0 to 4
- household spaces which are flats
- people who are aged 25 to 44
- average number of people per room
- population density
- people who travel to work using public transport
- people who are not born in the UK
- people identifying as Indian, Pakistani or Bangladeshi
- people identifying as black.

London Suburbs

Range-standardised difference from the **UK mean**. Positive values show an above average level of the population and negative values show a below average level of the population

1. For a variable to be 'far below average' it must have a difference of more than 0.5 below the UK mean.

2. For a variable to be 'close to the average' it must have a difference less than 0.05 either above or below the mean.

3. For a variable to 'far above average' it must have a difference of more than 0.5 above the UK mean.

Subgroup 2.4.7 – London Suburbs - B (1.8% of the UK population)

The members of this subgroup are in Outer London. Croydon is the most typical LAD in this subgroup and Waltham Forest the least typical. In this subgroup:

The variables with a proportion far below the national average are¹

- women who work part time
- households with two adults and no dependent children
- household spaces which are detached
- people who are aged 45 to 64
- people who work in manufacturing.

The variables with a proportion close to the national average are²

- people who work in the health or social work industry
- household size.

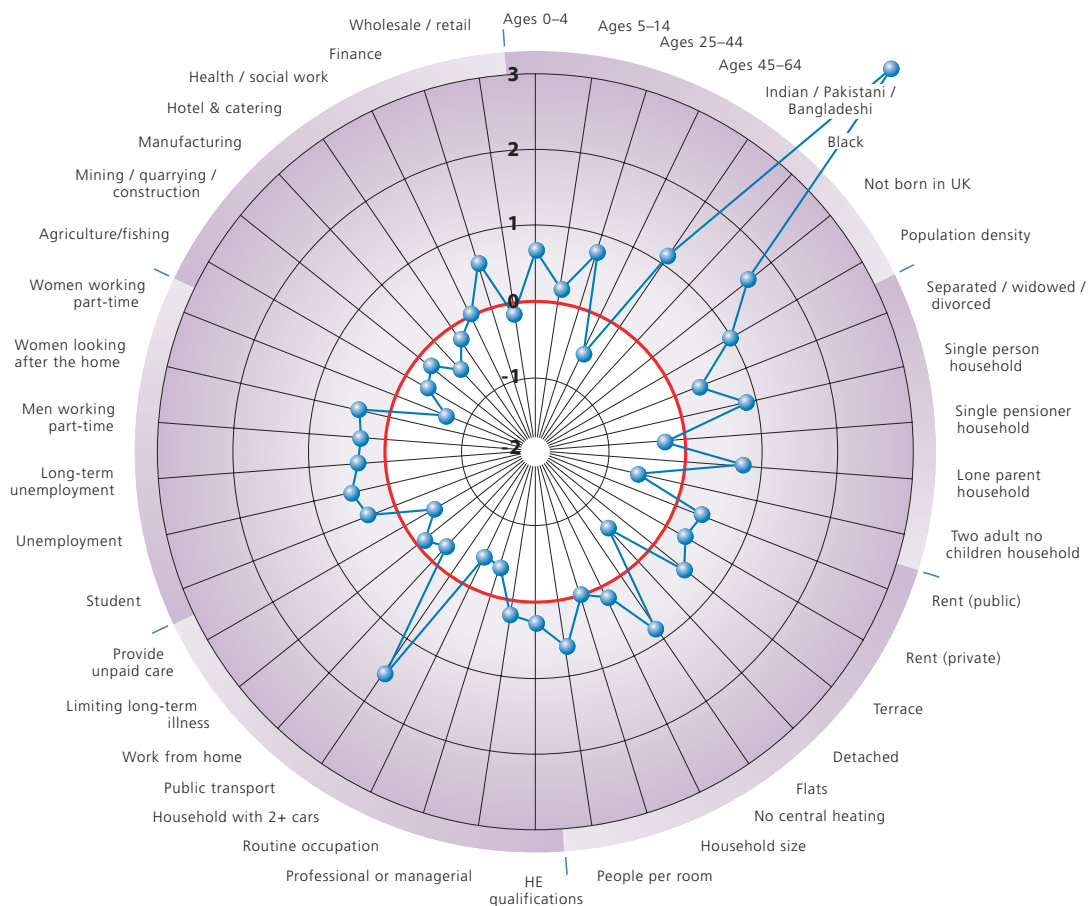

The variables with a proportion far above the national average are³

- household spaces which are terraced

- people who work in the finance industry
- average number of people per room
- people who are aged 0 to 4
- households with one adult and dependent children
- people who are aged 25 to 44
- households with one person (who is not a pensioner)
- household spaces which are flats
- population density
- people identifying as Indian, Pakistani or Bangladeshi
- people who travel to work using public transport
- people who are not born in the UK
- people identifying as black.

London Suburbs – B

Range-standardised difference from the **UK mean**. Positive values show an above average level of the population and negative values show a below average level of the population

1. For a variable to be 'far below average' it must have a difference of more than 0.5 below the UK mean.

2. For a variable to be 'close to the average' it must have a difference less than 0.05 either above or below the mean.

3. For a variable to be 'far above average' it must have a difference of more than 0.5 above the UK mean.
