A National Statistics Publication

National Statistics are produced to high professional standards set
out in the National Statistics Code of Practice. They undergo regular
quality assurance reviews to ensure that they meet customer needs.
They are produced free from any political interference.

About the Office for National Statistics

The Office for National Statistics (ONS) is the government
agency responsible for compiling, analysing and disseminating
many of the United Kingdom's economic, social and demographic
statistics, including the retail prices index, trade figures and labour
market data, as well as the periodic census of the population and
health statistics. The Director of ONS is also the National
Statistician and the Registrar General for England and Wales, and
the agency that administers the registration of births, marriages and
deaths there.

Commentary

Mid-2000 population estimates for England and Wales

This publication gives the Registrar General's estimates of the resident population of England and Wales on 30 June 2000. Estimates are shown for England and Wales as a whole and for the local and health authority areas in England and Wales. In addition tables of the population of the United Kingdom by age and sex, and the constituent countries of the UK, are included as a convenience for readers. However, the text refers mainly to England and Wales, which is the primary focus of this publication.

Changes in the population age structure mid-1991 to mid-2000

Table A shows for the United Kingdom, Great Britain, England and Wales, how the size of the population in various age groups has changed between mid-1991 and mid-2000. This commentary is about England and Wales.

The population has increased since 1991 with the biggest increases being observed in four age groups:

- the very elderly age group of 85 and over
- those aged 45-64/59
- those aged 30-44
- children aged 5-15

The increases at ages 45-64/59 are due in part to the post World War II baby boom; those in the 30-44 age-group in part to the high birth rates during the sixties. The increase in the very elderly age-group of 85 and over reflects increasing life expectancy.

Despite the overall increase in the population some age groups have decreased since 1991. These are the 0-4, 16-29 and 65/60-74 age groups. The decline in these groups is due in part to low birth rates in the relevant past years. For instance the 16-29 age-group decline is partly as a result of low birth rates during the seventies, the 65/60-74 age-group is partly as a result of low birth rates during the thirties and the decline in the 0-4 age group is due to recent low birth rates.

Components of population change to mid-2000

Table B shows components of population change in England and Wales between mid-1991 and mid-2000. Of the total increase between mid-1999 and mid-2000, 60 thousand is due to natural change (an excess of births over deaths) and most of the remaining change is due to net in-migration. The in-migration is made up of people migrating to England and Wales including asylum seekers and people who came originally as visitors and were subsequently granted leave to remain. The migrants to England and Wales include people returning after a stay abroad of a year or more.

Sub-national population changes

Estimates of the sub-national population change are less precise than those at the national level because of greater uncertainty about migration. **Table C** shows the average annual growth rate by area type, using the 1999 revised ONS classification of local authorities of Great Britain (this was revised to reflect the administrative boundaries of local

authorities as they were organised in 1999). Most areas exhibited population growth between 1991 and 2000, apart from the mining, manufacturing and industry family which fell by 0.1 per cent. The highest growth since 1991 has been in the London areas, particularly the West Inner London Boroughs which includes the three boroughs of Kensington & Chelsea, Westminster & the City of London³ and Camden.

¹ Local authority districts and unitary authorities have been classified according to the Office for National Statistics Classification of local and health authorities of Great Britain (1999 ISBN 1 85774 355 5) and using the boundaries that existed on 1 April 2000.

² The figures cover almost a thirty year period but the earlier years should be interpreted with care because of possible changes in the character of local areas over the period. Furthermore, as this is a broad characterisation at local authority level, not all areas within an authority's boundaries will conform to the authority's classification.

³ In the classification, the City of London and the Isles of Scilly are combined with the neighbouring authorities of City of Westminster and Penwith respectively.

Note: Figures may not add exactly due to rounding.

The contents of this Reference Volume

Tables 1 to 7 give estimated population by single years of age for the United Kingdom, Great Britain, England and Wales (combined) and for England and Wales separately, Scotland and Northern Ireland. **Tables 8 and 10** show the 'all ages' estimates for local government areas and health authority areas respectively. These are defined by the boundaries that existed on 30 June 2000. **Tables 9 & 11** show the components of change for local government and health authority areas respectively. The information in **Tables 8 and 9** is presented for the local authorities of England using the Government Office Regions as the primary classification. **Table 12** shows the 'all ages' estimates for the Government Office Regions, Standard regions of England, Greater London,

Metropolitan counties and Non-Metropolitan counties and Regional Offices. **Table 13** shows the local authority areas that have been involved in local government boundary changes between 1991 and 2000; these boundary changes exclude ward-level changes that occur wholly within a local authority area.

Figure A shows the correspondence between the Standard Statistical Regions and the Government Office Regions.

The age breakdown that is provided for the sub-national estimates in this Volume is only for three very broad age groups. Further breakdowns can be provided on request. To find out how see the later section on availability of mid-year population estimates.

Definition of resident population

The estimated population of an area includes all people who usually live there, whatever their nationality. Members of HM and US Armed Forces in England and Wales are included on a residential basis wherever possible. HM Forces stationed outside England and Wales are not included. Students are taken to be resident at their term-time address.

Calculation of mid-year population estimates - Methodology

The population estimates are based upon the 1991 Census with an allowance for under-enumeration in the Census. The methodology used is the cohort component method which is to update the previous mid year estimate allowing for natural change due to births and deaths during the past year and adding on net migration. This methodology is used to produce both the national and the subnational population estimates but there are necessarily slight differences in the way the methodology is applied at the subnational level. These are described briefly here; an electronic paper describing the methodology in greater detail is available at the National Statistics website (www.statistics.gov.uk) or a copy can be obtained by emailing pop.info@ons.gov.uk

At the national level, the resident population base for the previous mid year is adjusted to remove foreign armed forces and their dependants before the population is aged-on by one year. The foreign armed forces and their dependants are a transient group that is estimated annually outside of the ageing-on process. Using registration data, births and deaths in the previous mid-year to mid-year period are allowed for directly. Deaths are subtracted according to their age and sex and births are added. An estimate of migration is made using a combination of surveys (which includes the International Passenger Survey) and proxy data. The proxy data in respect of movements within the United Kingdom are based on re-registrations with general practitioners. In addition Home Office data are included in respect of applications from asylum seekers, as well as applications for leave to remain from people who originally entered the country as visitors.

At a sub-national level, the resident population base for the previous mid-year is adjusted to remove certain groups that are not automatically aged-on, i.e. boarding-school pupils, prisoners, both home and foreign armed forces, and dependants of foreign armed forces. Data for these groups for the current year are collected separately. The adjusted previous mid-year population estimate is then aged-on and boundary changes are applied. Using registration data, births and deaths in the previous mid-year to mid-year period are applied to the

previous mid-year population. In estimating migration, there is a need to take account of the distribution of the population between local areas. Migration is estimated using a number of data sources that include the International Passenger Survey, the National Health Service Central Register, demographic information including the postcode of resident address from patient registers in England and Wales, and the 1991 Census. The subnational estimates are constrained to sum to the national level estimates by age and sex. In order to achieve this, a reconciliation adjustment is applied.

The data sources used in this method are the best that are available on a nationally consistent basis down to local and health authority level. The births and deaths information is very high quality as it is based on registration data. The migration component of the population estimates is more difficult to estimate accurately. There is no registration of migration in the UK and hence no administrative data exist that are a direct measure of migration. The data sources that are used are continuously being researched for the possibility of making improvements. As a result of research that ONS carried out, methods were developed to produce internal migration estimates using patient registers. An explanation of the patient register based migration estimates and their use in the population estimates was included in an appendix to the 1999 population estimates report PE No. 2 and was also described in an article in Population Trends 101.

ONS produces population estimates for both local and health authority areas. To do this on a consistent basis, these estimates are produced for 'building brick' areas. A building brick is usually the same as a local authority area, i.e. a unitary authority, a London borough or a district or borough council. However, where a local authority is split between different health authority areas, a building brick corresponds to part of a local authority. Building bricks can then be aggregated to form either local or health authorities.

Additional Information

All figures presented in PE No.3 have been rounded independently, so component figures may not add exactly to totals.

When reproducing any of these data, the following should always be quoted:

Availability of population estimates in publications

Selections of population estimates are presented regularly in various ONS publications.

In the annual reference volumes:

Key Population and Vital Statistics: Local and health authority areas (Series VS/PPI)
Annual Abstract of Statistics
Social Trends
Regional Trends

and in quarterly issues of Population Trends and Health Statistics Quarterly.

Availability of population estimates on the Internet & Statbase

There are Excel versions of the tables in this pdf file which can be accessed by clicking on the links provided in the tables. All these tables are also available on Statbase. Excerpts from the text are available in the summary description for some of the tables. To access these tables from the National Statistics Website, click on the 'Themes' button on the top left of the screen and select the 'Population and Migration' Theme. Within the Theme, click on the 'Books, releases and CD's' and then click on the 'Comprehensive list' link on the right of the screen. Scroll right down the list and select 'Population Estimates for England and Wales' from the items listed under 'P', this will take you to the product page which gives links to the all the population tables.

Availability of population estimates on disk or CD-ROM

In addition, population estimates can be made available in machine-readable format on disk or CD-ROM - often in more detail than the figures supplied in this Reference Volume. A charge is made for these to cover costs. An order form is enclosed with this volume relating to our standard products. Descriptions of the methodology used to produce population estimates will be provided with data purchased on disk or CD.

D/CD PE2000 (1) • The population of the United Kingdom, England and Wales (combined), England and Wales (separately), as at 30 June 2000 by gender and single year of age

- The population of England and Wales, England, Wales, standard regions, government office regions, counties and local authority districts/London boroughs as at 30 June 2000 by gender and quinary age groups
- A description of the methodology used to produce population estimates

D/CD PE2000 (2) • The population of the United Kingdom, England and Wales (combined), England and Wales (separately), as at 30 June 2000 by gender and single year of age

- The population of England and Wales, England, Wales, regional offices and health authorities as at 30 June 2000 by gender and quinary age groups
- A description of the methodology used to produce population estimates

D/CD PE2000 (3) • The population of local and health authorities by sex and quinary age groups for mid-1991 to mid-2000 on 2000 boundaries (available from October 2001)

Further advice on these products and requests for other population estimates data should be made to:

Office for National Statistics
Population Estimates Unit
Room 2300
Segensworth Road
Titchfield
FAREHAM
Hampshire
PO15 5RR

Telephone: 01329 813281/813233 Fax: 01329 813295
E-mail: pop.info@ons.gov.uk

Completed order forms should be returned to the above address.

Population estimates for Scotland and Northern Ireland are compiled by the General Register Office for Scotland and the Northern Ireland Statistics and Research Agency respectively. Requests for their subnational estimates and queries about the production of these estimates should be addressed to GRO (S) and NISRA. The contact addresses are:

²³ "Bristol/Bath area" refers to the area previously covered by the administrative county of Avon which was abolished and replaced by unitary authorities on 1 April 1996.

²⁴ The former county of Devon is the area covered by the current Devon county and the unitary authorities of Plymouth and Torbay created on 1 April 1998.

²⁵ The former county of Dorset is the area covered by the current Dorset county and the unitary authorities of Bournemouth and Poole created on 1 April 1997.

²⁶ The former county of Wiltshire is the area covered by the current Wiltshire county and Swindon UA created on 1 April 1997.

* For a breakdown of natural change into its 3 component parts for 1991-1999, see table 11 in the mid-1999 publication (PE no.2)

** Areas involved in boundary changes of more than 100 people since 1991 - see Table 13. The effects of such changes are included within "Migration and other changes".

Note: Figures may not add exactly due to rounding.

More detailed information about these boundary changes is included in Statutory Instruments, available from HMSO Bookshops. Information is also available from the Local Government Sponsorship Division, Department of the Environment Transport and the Regions, Eland House, Bressenden Place, London, SW1E 5DU, (tel no: 0207 890 4256).

A user guide is produced annually by ONS which contains information about the incidence and extent of changes to the boundaries of all statutory administrative areas since the 1991 Census.

The information about the changes is given in two formats:

- a set of illustrated maps;
- lists of the Statutory Instruments (Orders) which define the changes.

The user guide also contains some descriptive text. The Guide - ONS Geography Series: 1 - is available, price £10, from ONS Geography User Support Unit, ONS, Titchfield, Fareham, Hampshire, PO15 5RR, (tel no: 01329 813477).
