Consumer price indices November 2008

In the year to November, the consumer prices index (CPI) rose by 4.1 per cent, down from 4.5 per cent in October.

In the year to November, the all items retail prices index (RPI) rose by 3.0 per cent, down from 4.2 per cent in October.

Over the same period, the all items RPI excluding mortgage interest payments index (RPIX) rose by 3.9 per cent, down from 4.7 per cent in October.

Main contributions to the change in the 12-month rate¹

CPI

For the second successive month, the largest downward contribution to the change in the CPI annual rate came from transport costs. This was mainly due to the price of fuels and lubricants which fell this year but rose a year ago. The average price of petrol fell by 9.3 pence per litre between October and November this year, to stand at 95.2 pence, compared with a rise of 3.5 pence last year. Diesel prices fell by 7.5 pence per litre this year compared with a rise of 5.0 pence last year. Within this division there was an additional small downward effect from the purchase of vehicles where the price of second-hand cars fell this year but rose a year ago. Partially offsetting these effects was a large upward contribution from transport services due to smaller seasonal price reductions in air fares than a year ago. The effect came from the cost of European and, to a lesser extent, domestic flights.

There was a further large downward contribution from housing and household services. This was largely due to heating oil which fell in price this year but rose a year ago reflecting movements in the price of crude oil.

There were small downward effects from:

- clothing and footwear where prices were largely unchanged this year compared with rises a year ago, the main effects coming from men's and women's outerwear
- alcoholic beverages and tobacco where, overall, the prices of alcoholic drinks fell by more than a year ago with the main effect coming from beer

The largest upward contribution to the change in the CPI annual rate came from food and non-alcoholic beverages. This was mainly due to fruit and vegetables where prices overall rose by more than a year ago with contributions from across a range of fresh and processed products. These effects were partially offset by milk, cheese and eggs, and bread and cereals, where prices rose by less than a year ago.

There was also a large upward contribution from recreation and culture where, overall, prices rose this year but fell a year ago. The effects were spread across a range of goods and services.

Small upward contributions came from:

- miscellaneous goods and services with the main effect from financial services
- health where prices of pharmaceutical products rose this year but fell a year ago
- communication where mobile phone charges rose this year but fell a year ago

Transport
CPI percentage changes over 12 months

Housing and household services
CPI percentage changes over 12 months

Food and non-alcoholic beverages
CPI percentage changes over 12 months

¹ The CPI and RPI use different classification systems. Background Note 12 shows how, for each of the two indices, the main categories contributing to changes in the 12-month rate relate to each other

RPI

The largest downward contribution to the change in the RPI annual rate came from motoring expenditure principally due to petrol and oil. As in the CPI, the price of petrol and diesel fell this year but rose a year ago. There was also a large downward effect from the purchase of motor vehicles with prices falling this year but rising a year ago.

A further large downward contribution came from housing. The effect came mainly from mortgage interest payments as, overall, lenders passed on October's half point decrease in the Bank rate. There was also a large downward effect from house depreciation with the smoothed DCLG house price index used to calculate this component falling this year but rising a year ago. Both mortgage interest payments and depreciation are excluded from the CPI.

There was also a large downward contribution from fuel and light. The effect came from oil and other fuels and was due to heating oil where, as in the CPI, prices fell this year but rose a year ago.

There were small downward contributions from:

- alcoholic drink where the price of beer off-sales fell this year but rose a year ago, particularly the price of bottled lager
- clothing and footwear where prices overall fell this year but rose a year ago

The largest upward contribution to the change in the RPI annual rate came from food where the price of seasonal food overall rose by more than a year ago. Within the food group, there were upward effects from fresh fruit, fresh vegetables other than potatoes, and other foods which includes products such as sauces. Partially offsetting small downward effects came from butter, mainly due to price rises in 2007, and poultry where prices fell this year but rose a year ago.

There were small upward contributions from:

- fares and other travel costs where prices fell by less than a year ago. As in the CPI, the seasonal fall in passenger air fares was smaller than in November 2007 with the main effects coming from fares on European and domestic routes
- household services due to rises in mobile phone charges this year compared with falls in November 2007
- personal goods and services where the price of chemists goods rose this year but fell a year ago
- leisure services where prices overall rose by more than a year ago

Motoring expenditure
RPI percentage changes over 12 months

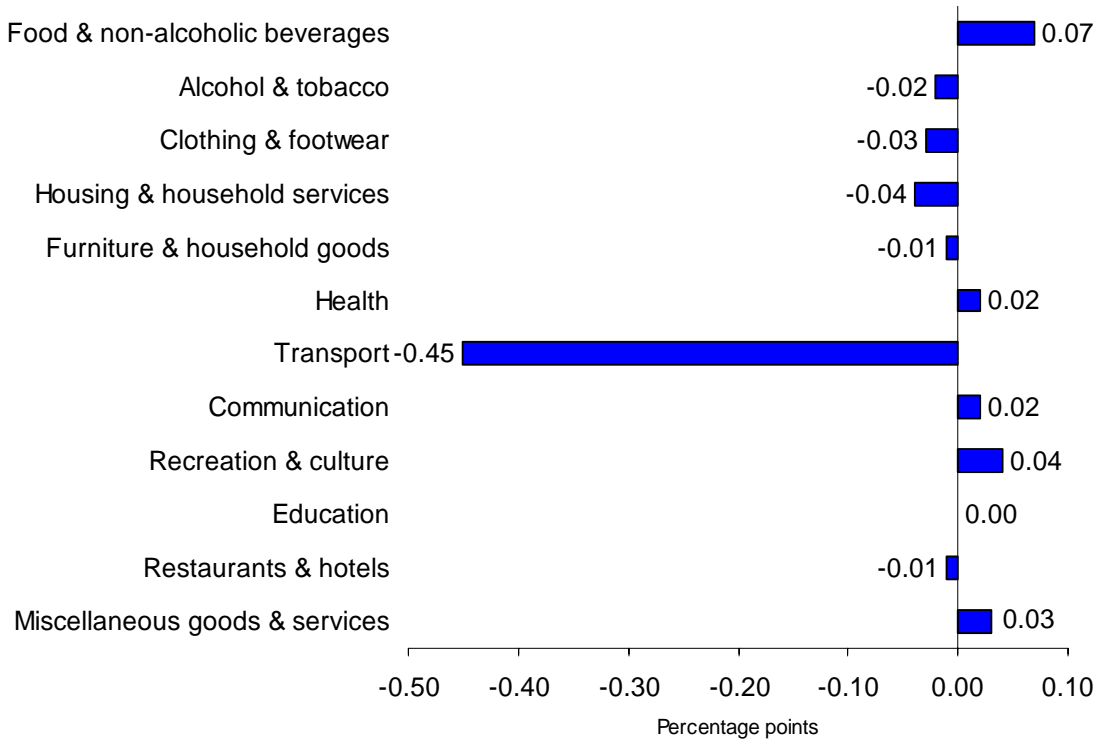

Housing
RPI percentage changes over 12 months

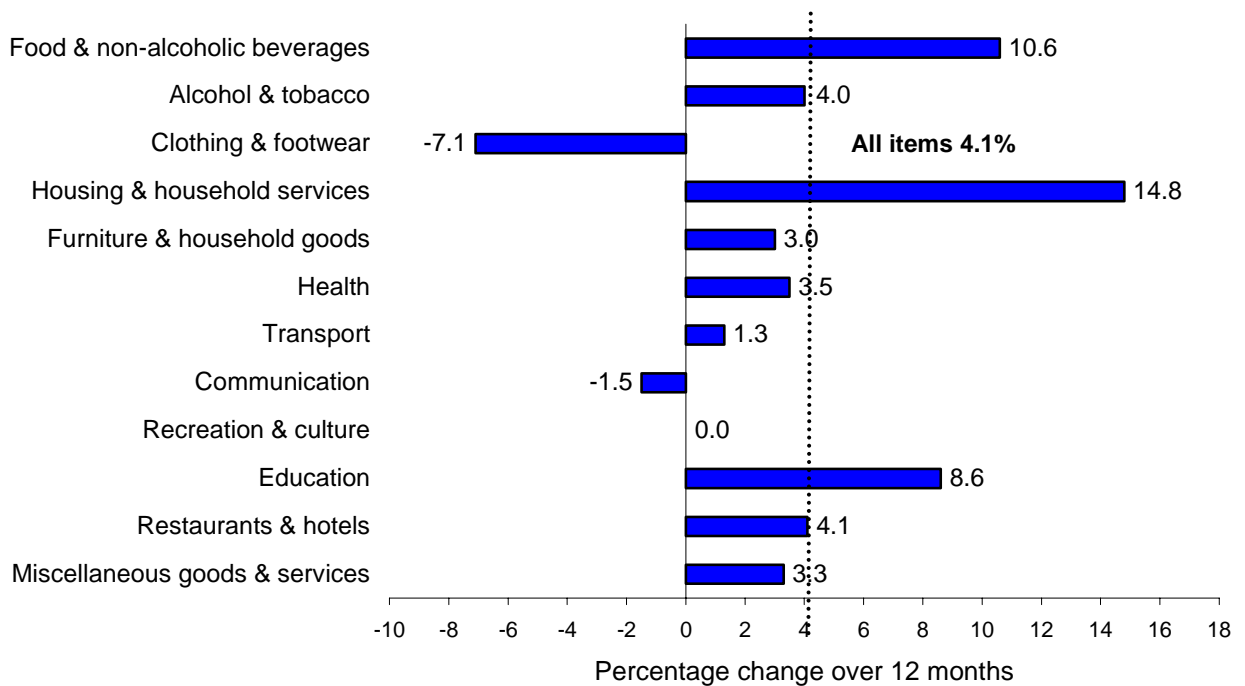

Food
RPI percentage changes over 12 months

CPI main contributions¹ to the change in the all items 12-month rate between October 2008 and November 2008 (-0.4 percentage points)

CPI comparison of the 12-month percentage changes

1. Individual contributions may not sum to the total due to rounding.

RPI main contributions¹ to the change in the all items 12-month rate between October 2008 and November 2008 (-1.2 percentage points)

RPI comparison of the 12-month percentage changes

1. Individual contributions may not sum to the total due to rounding.

CPI main contributions¹ to the all items 12-month rate (4.1 percentage points)

Main contributions to the all items 12-month rate (4.1 percentage points)

The largest contribution to the 4.1 per cent 12-month rate came from housing and household services (1.7 percentage points) where gas prices have risen by 50.6 per cent over the year and electricity prices have risen by 31.3 per cent.

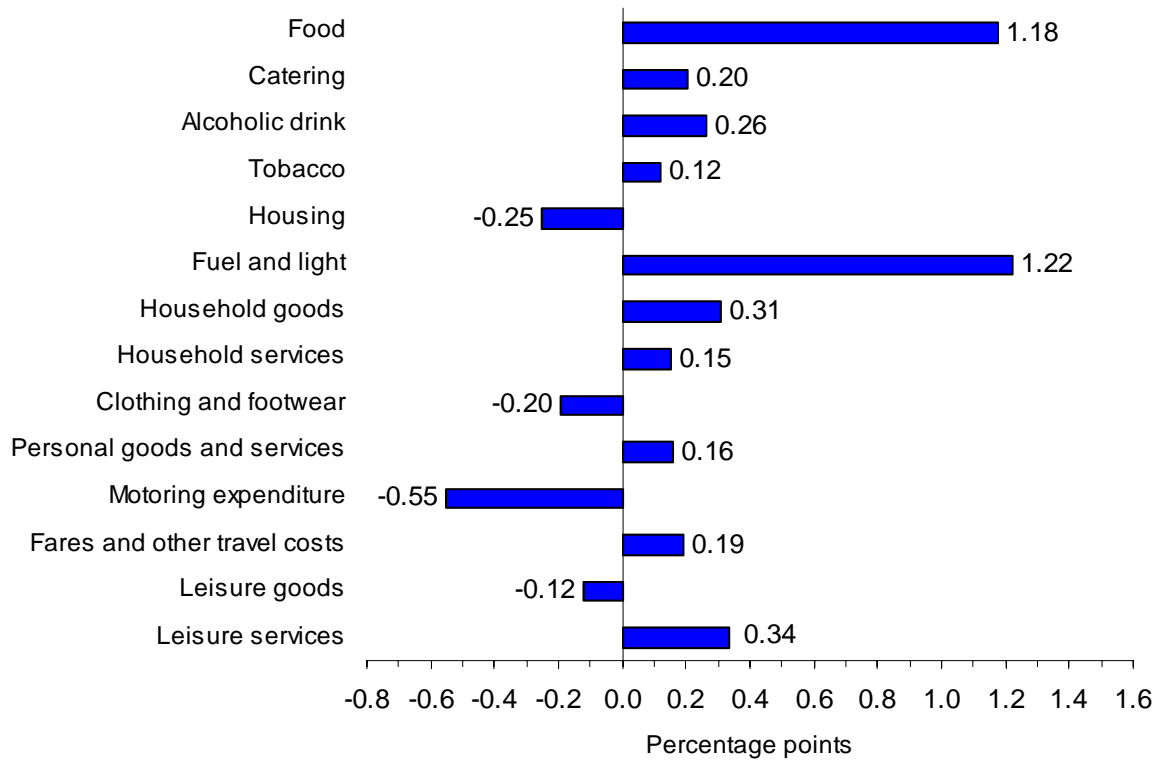

Food and non-alcoholic drink contributed 1.1 percentage points to the 12-month rate. Overall prices rose by 10.6 per cent with the largest price rises recorded against bread and cereals, meat, milk, cheese and eggs, fruit, vegetables and food products which contains items such as sauces.

Restaurants and hotels contributed 0.6 percentage points to the 12-month rate. Overall, prices rose by 4.1 per cent with the largest rise of 4.7 per cent recorded against restaurants and cafes.

In contrast, prices of clothing and footwear fell by 7.1 per cent over the 12 months to November and this had a downward pull of 0.5 percentage points on the rate.

1. Individual contributions may not sum to the total due to rounding.

RPI main contributions¹ to the all items 12-month rate (3.0 percentage points)

Main contributions to the all items 12-month rate (3.0 percentage points)

A large contribution to the 3.0 per cent 12-month rate came from fuel and light (1.2 percentage points) with the largest effect coming from increases in gas and electricity bills.

Food also contributed 1.2 percentage points to the 12-month rate. Overall prices rose by 10.7 per cent with the higher price rises recorded against beef, lamb, pork, bacon, processed fish, bread, cereals, biscuits and cakes, potatoes and vegetables.

There were offsetting effects from:

- motoring where, overall, prices fell by 4.2 per cent over the year due to falls in the price of motor vehicles and petrol
- housing where prices fell by 1.0 per cent with the main contributions coming from mortgage interest payments and house depreciation
- clothing and footwear where prices fell by 4.4 per cent over the year

1. Individual contributions may not sum to the total due to rounding.

BACKGROUND NOTES

Possible delay to CPI publication in January

1. The temporary reduction in VAT to 15% will make collection of CPI / RPI price information more difficult, because in many cases shops are applying the VAT reduction at the till. We are taking steps to adjust prices collected to take account of those VAT reductions that are applied in this way. This process involves additional work and may delay publication of December CPI / RPI results scheduled for publication on 20 January by up to two weeks. We expect to announce on 12 January whether or not there will be a delay.

Relevance

2. The consumer prices index (CPI) is the main United Kingdom domestic measure of consumer price inflation for macroeconomic purposes. It forms the basis for the Government's inflation target that the Bank of England's Monetary Policy Committee (MPC) is required to achieve.
3. Internationally, the CPI is known as the Harmonised Index of Consumer Prices (HICP). HICPs are calculated in each Member State of the European Union, according to rules specified in a series of European Regulations developed by Eurostat in conjunction with the EU Member States. HICPs are used to compare inflation rates across the European Union. Since January 1999 it has also been used by the European Central Bank (ECB) as the measure of price stability across the euro area.
4. The retail prices index (RPI) is the most long-standing general purpose measure of inflation in the United Kingdom and is available from June 1947. It is used for a variety of purposes by both government and external users including the indexation of various incomes and prices and the uprating of pensions, benefits and index-linked gilts.

Methodology

5. The CPI and the RPI are compiled using the same underlying price data, based on a large and representative selection of around 650 individual goods and services for which price movements are measured in around 150 randomly selected areas throughout the UK. Around 120,000 separate price quotations are used every month to compile the indices. The outlets in which the prices are collected are selected randomly. Expenditure weights are held constant for one year at a time.
6. The selection of goods and services that are priced to compile the CPI and RPI is reviewed annually. The contents of the 2008 basket are described in an article published on the National Statistics website at:
<http://www.statistics.gov.uk/cci/article.asp?ID=1951>

The expenditure weights used to compile the indices are also updated each year. Additional details of the updated CPI and RPI weights for 2008 are available from the National Statistics website in an article entitled Consumer Prices Index and Retail Prices Index: Updating Weights for 2008: <http://www.statistics.gov.uk/cci/article.asp?id=1991>

7. Rates of change for the CPI are calculated from unrounded index levels, rather than on the published indices, which are rounded to one decimal place. The use of unrounded indices increases the accuracy of the calculation. The unrounded index levels are available on request. By contrast, rates of change for the RPI are calculated from the published rounded indices.

Reliability

8. Once the RPI indices are published they are never revised. CPI indices are revisable although past revisions have been minimal with the exception of those arising from re-referencing of the CPI to 2005=100, which took place with the publication of the January 2006 indices.

Comparability

9. The CPI's coverage of goods and services was extended in stages in the areas of health, education, childcare and insurance, with effect from the January 2000, 2001, and 2002 indices. In 2000, there was also a change to the population basis for the weights which was broadened from private households to include expenditure by foreign visitors and residents of institutional households. Further details can be found in a series of articles: http://www.statistics.gov.uk/about/methodology_by_theme/cpi
10. The official CPI series starts in 1996 but estimates for earlier periods are available back to 1988. These estimates are broadly consistent with data from 1996 but should be treated with some caution. The following article provides more detail: <http://www.statistics.gov.uk/cci/article.asp?ID=31>
11. RPI data are available back to 1947 but have been re-referenced on several occasions since then, generally accompanied by changes to the coverage and/or structure of the detailed sub-components. Details of these changes are given in Appendices 1 and 2 of the CPI Technical Manual: <http://www.statistics.gov.uk/statbase/Product.asp?vlnk=2328>

Coherence

12. The CPI and RPI both measure the average change from month to month in the prices of consumer goods and services purchased in the UK. However, they differ in both coverage and methodology. A detailed description of these differences is given in an article entitled "The New Inflation Target: the Statistical Perspective": www.statistics.gov.uk/StatBase/Product.asp?vlnk=10913. The differences are summarised below:

- In the CPI, the geometric mean is used to combine the individual prices into elementary indices at the most basic level whereas the RPI uses arithmetic means
- The CPI excludes a number of RPI series mainly relating to housing costs (for example, council tax), and in particular to owner occupiers' housing costs (including mortgage interest payments, house depreciation and buildings insurance). In addition, the CPI excludes the annual road fund licence and, from 2006, TV licences which are classified as taxes in the UK National Accounts, and Trades Union subscriptions which by convention are not part of household expenditure
- The CPI includes series for university accommodation fees, foreign students' university tuition fees, and unit trust and stockbrokers' charges, none of which are included in the RPI
- The CPI is categorised according to the international classification system, COICOP (Classification Of Individual Consumption by Purpose). The way in which this maps to the RPI groupings is shown in the following table:

COICOP Divisions	RPI Groups
01 Food & non-alcoholic beverages	Food
02 Alcohol & tobacco	Alcoholic drink (off sales) Tobacco
03 Clothing & footwear	Clothing & footwear
04 Housing & household services	Housing (exc. Mortgage interest payments, depreciation, council tax & building insurance) Fuel & light
05 Furniture & household goods	Household goods Domestic services
06 Health	Personal goods & services (health-related items)
07 Transport	Motoring expenditure Fares & other travel costs
08 Communication	Household services (exc. domestic services & fees and subscriptions)
09 Recreation & culture	Leisure goods Leisure services
10 Education	Fees & subscriptions (education-related items)

11 Restaurants & hotels	Catering Alcoholic drink (on sales)
12 Miscellaneous goods & services	Personal goods & services (non health-related items) Fees & subscriptions (non education-related items)

- The index for the purchase of new cars in the CPI is quality adjusted and based on actual published prices for new cars. New car prices in the RPI are imputed from movements in second hand car prices
- The CPI weights are based on expenditure by all private households, foreign visitors to the UK and residents of institutional households. In the RPI, weights are based on expenditure by private households only, excluding the highest income households and pensioner households mainly dependent on state benefits
- In the construction of the CPI weights, amounts paid out in insurance claims are distributed among the COICOP headings according to the nature of the claims' expenditure, with the residual (the service charge) being allocated to the relevant insurance heading. For the RPI weights, total expenditure (that is, gross of claims paid out) is assigned to the relevant insurance heading

13. A breakdown of the difference between the CPI and RPI annual rates of inflation is shown in Table 10 of the CPI First Release.

Accessibility

14. This release includes the November 2008 data, collected on 18 November 2008. Future publication dates are 20 January, 17 February, 24 March, 21 April, 19 May and 16 June. Please note that the publication of December data on 20 January may be delayed. This is explained in further detail in background note 1. The European Commission (Eurostat) will release figures for the harmonised index of consumer prices (HICP) for the month of November 2008 for EU member states excluding the UK, together with an EU average, on 17 December 2008. Further information on HICP for the European Union, Eurozone and other EU Member States is available from Eurostat's HICP web page: http://epp.eurostat.ec.europa.eu/pls/portal/url/page/PGP_DS_HICP

Further information

15. A more detailed quality report for this First Release is available at: <http://www.statistics.gov.uk/CCI/article.asp?ID=1585>

16. A full description of how the CPI and RPI are compiled is given in the Consumer Price Indices Technical Manual 2007 edition: <http://www.statistics.gov.uk/statbase/Product.asp?vlnk=2328>

General

17. Details of the policy governing the release of new data are available from the press office. Also available is a list of the names of those given pre-publication access to contents of this release.
18. Complete runs of series in this release are available to download free of charge at: <http://www.statistics.gov.uk/timeseries> .

² The coverage of this special aggregate has changed extensively since January 2000, when Social protection was first included and extensions to the Education and Health divisions also took effect. Health was further extended with effect from January 2001. Details are given in a series of Economic Trends articles available on the National Statistics website: www.statistics.gov.uk/cpi

¹ For further information on the composition of the indices shown, see 'The Consumer Prices Index: Goods and Services Indices and Special Aggregates', which can be downloaded from: www.statistics.gov.uk/cci/article.asp?id=1060

1 Published as the CPI in the UK.

2 The EICP (European Index of Consumer Prices) is the official EU aggregate. It covers 15 member states until April 2004, 25 member states from May 2004, and 27 members from Jan 2007, the new member states being integrated using a chain index formula.

The EU 25 annual average for 2004 is calculated from the EU 15 average from January to April and the EU 25 average from May to December.

3 The coverage of the European Union was extended to include Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia and Slovenia from 1 May 2004 and Bulgaria and Romania from 1 Jan 2007.

4 The coverage of the Monetary Union Area index was extended to include Greece with effect from Jan 2001.

1 The differences due to housing, coverage and formula effect are all calculated independently and are not additive.

Source: National Statistics

2 Difference due to use of different formulae to aggregate prices at the most basic level.

3 This difference is derived as a residual.

CPI,RPI and Other Related Indices

CPI goods and services - Percentage changes over 12 months: the latest three years

RPI goods and services - Percentage changes over 12 months: the latest three years
