Labour market statistics

February 2003: East Midlands

All data are not seasonally adjusted unless otherwise specified

Latest Labour Force Survey data over the year to December 2002 indicate employment and unemployment stable in the East Midlands.

Data for the three months to December 2002 show the employment rate at 76.7 per cent, up 0.2 percentage points on a year earlier. The unemployment rate was 4.6 per cent, up 0.2 percentage points on a year earlier.

The seasonally adjusted claimant count was down in the year to January 2003.

2001 CENSUS

Data in this release are not consistent with the 2001 Census population data. Therefore, they are not comparable with the data in the UK release. See Special note on page 6.

		Level (thousands)	Rate (%)	Change on year (level)	Sampling variability (thousands)	Change on year (rate)	Sampling variability (%)
Employment*	Oct-Dec	2,069	76.7	23	± 52	0.2	± 1.7
Unemployment**	Oct-Dec	99	4.6	6	± 17	0.2	± 0.9
Economically active*	Oct-Dec	2,169	80.5	30	± 52	0.3	± 1.6
Economically inactive+ of which:	Oct-Dec	511	19.5	-6	± 53	-0.3	± 1.6
Not wanting a job+	Oct-Dec	375		-14	± 47		
Wanting a job+	Oct-Dec	136		8	± 29		
Civilian workforce jobs	Sep 2002	1,964		-16	..		
Claimant count (seasonally adjusted)	Jan 2003	56.8	2.8**	-3.1		-0.2	

See background note 2 on sampling variability.

* Levels are for those aged 16 and over, rates are for those of working age (16-59/64).

** Levels and rates are for those aged 16 and over. Rate is as a proportion of economically active.

+ Levels and rates are for those of working age.

++ Denominator = claimant count + workforce jobs. For regional claimant count proportions, using resident working age populations see Tables 14 and 17. See note on page 5 for further details.

.. Not available.

From May 2001: vacancy series deferred (see Special note on page 7).

New this month:

October to December 2002 data: latest three-month average LFS results;

January 2003 data: claimant count.

All data are not seasonally adjusted unless otherwise specified

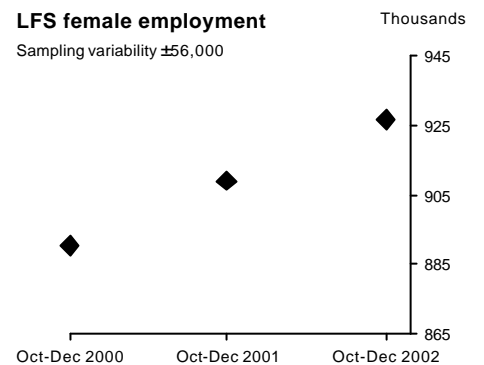

Employment (tables 1 to 6)

The LFS estimate of employment in the East Midlands was 76.7 per cent in the October to December 2002 period, up 0.2 percentage points on the same period a year earlier. The employment level was 2.07 million in the October to December 2002 period, up 23,000 on the same period a year earlier.

Seasonally adjusted employee jobs figures were down 12,000 in the quarter to September 2002.

Employee jobs were down 19,000 in the year to September 2002. This was mainly due to a fall in the manufacturing industries.

Employee jobs by industry
Change on year from September 2001

Unemployment (table 1)

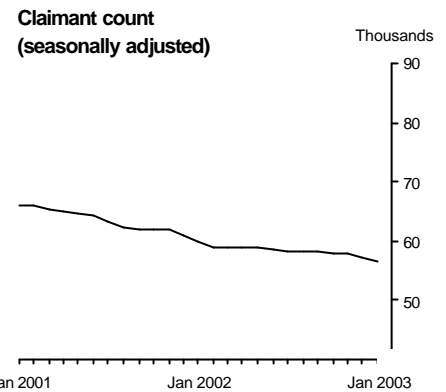

The unemployment rate in the East Midlands was 4.6 per cent in the October to December 2002 period, up 0.2 percentage points on the same period a year earlier. The rates for men and women in October to December 2002 were 4.6 and 4.5 per cent respectively.

All data are not seasonally adjusted unless otherwise specified

Claimant count (tables 7 and 8)

The seasonally adjusted claimant count rate in January 2003 was 2.8 per cent, unchanged from December 2002, and down 0.2 percentage points since January 2002. The seasonally adjusted number of claimants in January 2003 was 56,800, down 600 on December 2002, and down 3,100 since January 2002. The not seasonally adjusted number of claimants was 61,900 in January 2003.

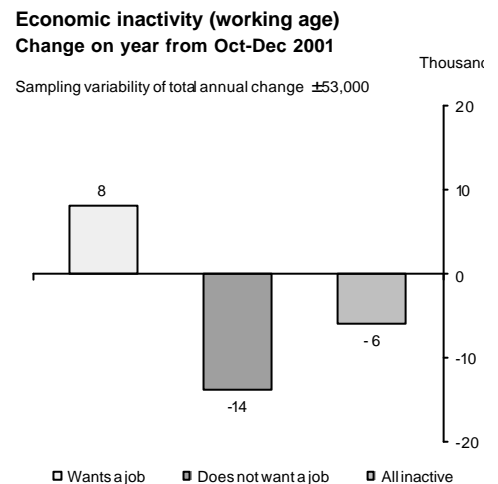

The not seasonally adjusted number of computerised claims of people aged 18 to 24 was 16,000 in January 2003, down 600 over the year. The number of computerised claims has fallen over the year for most age and duration groups.

Economically active (tables 1 and 9)

There were 2.17 million economically active people in the East Midlands in the October to December 2002 period.

Economically inactive (tables 1, 10 and 11)

The LFS estimate of economically inactive people in the East Midlands in the October to December 2002 period was 1.20 million, with 511,000 of these of working age. Over the year the number of economically inactive people of working age was down 6,000.

Vacancies (table 12)

Publication of the seasonally adjusted Jobcentre vacancy series has been deferred. Figures from May 2001 are affected by the introduction of Employer Direct – see note on page 7.

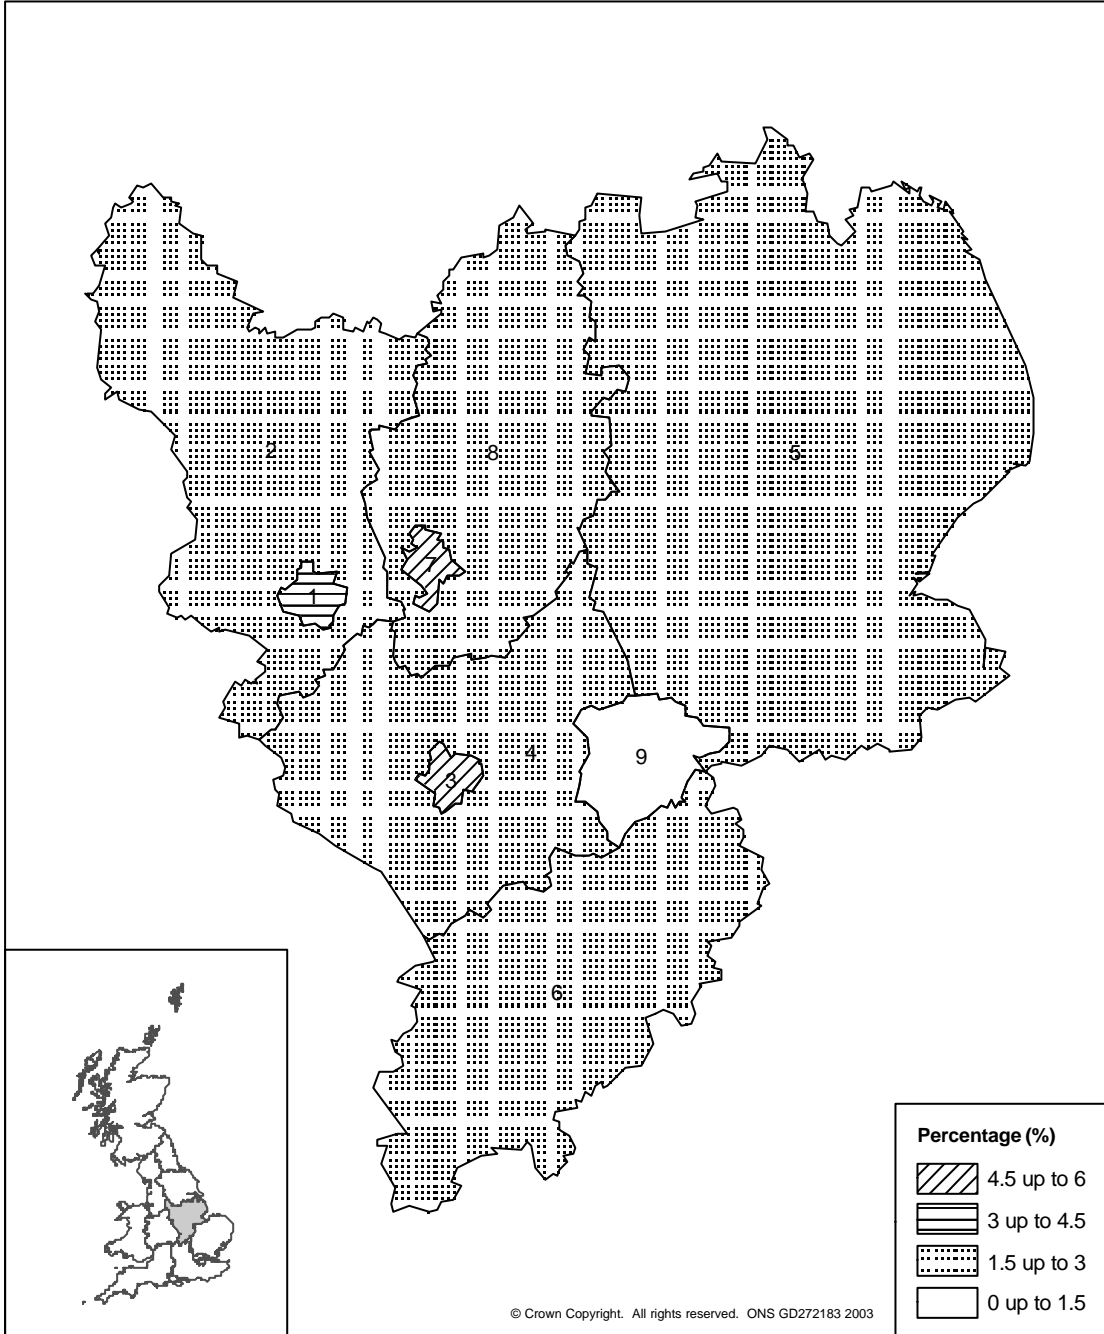

Local area data (table 14)

The claimant count as a proportion of the resident working age population was lowest in Rutland UA, at 0.7 per cent. It was highest in Leicester UA, at 4.8 per cent.

All data are not seasonally adjusted unless otherwise specified

Claimant count as a proportion of the resident working age population, by County/UA
 January 2003 - East Midlands

1	Derby UA	3.8%
2	Derbyshire	2.2%
3	Leicester UA	4.8%
4	Leicestershire	1.6%
5	Lincolnshire	2.1%
6	Northamptonshire	1.8%
7	Nottingham UA	4.5%
8	Nottinghamshire	2.1%
9	Rutland UA	0.7%

REVISIONS

There are no significant revisions this month to the data in this release.

THIS MONTH

From this month, the First Release for London will include a map showing the claimant count as a proportion of the resident working age population by London Borough. The recent withdrawal of the previous workplace-based claimant count rates below regional level from National Statistics, and their replacement with residence-based measures, largely reflected the view, which was widely supported by users, that commuting patterns have a distorting effect on these rates. They can therefore be misleading as indicators of local labour market conditions. For areas which are not self-contained labour markets, the previously published rates tend to overstate the incidence of claimant unemployment where there were only a few jobs in the area but where many residents commute out of the area. In contrast, the rates would tend to understate the problems among residents in city areas where there are a large number of people commuting in from suburbs or beyond. The new figures, shown in the map, based on the proportions of people of working age living in an area who are claiming Job-seeker's Allowance, do not suffer from this limitation. For further details see the Special note below on claimant count rates.

SPECIAL

Claimant count rates

Following the recommendations in the LMS Framework Review, the workplace-based claimant count rates for sub-regional areas have been withdrawn from National Statistics and have ceased to appear in ONS publications. Users wishing to calculate the rates themselves will be able to continue to do so, using information readily accessible via the Nomis[®] website (<http://www.nomisweb.co.uk>).

ONS is now publishing local area claimant count figures as a proportion of the resident working age population for local authorities and NUTS 3 areas, using the mid-2001 population estimates published by ONS on 10 October 2002. Comparable figures for countries and regions of the United Kingdom are also available.

When the necessary ward-level working age population data are available from the 2001 Census, ONS will use these to calculate and publish residence-based claimant count proportions for Travel-to-Work areas and Parliamentary Constituencies.

The exact date of release of the necessary ward-level census

data has not yet been announced, but is expected towards the end of the first half of 2003. Publication of the residence-based claimant count proportions will follow two months after the availability of the census data.

April 2003 revisions to interim Labour Force Survey (LFS) estimates consistent with the 2001 Census

During February and March 2003, the final mid-year population estimates for the years 1982 to 2000, consistent with the 2001 Census, are being published. The figures for 1992 to 2000 will be incorporated into a revised set of LFS UK-level interim series to be published in the LMS First Release on 16 April 2003. These will be consistent with the interim LFS series for 2001 to 2003 which will not need revision at this stage. Revised interim UK-level series for 1984 to 1991 (spring quarters only) will be published after the relevant population data become available.

Also to be published on 16 April will be a new set of interim LFS series for 1996 to 2003 for Scotland, Wales and the English regions. These series will also be consistent with the 2001 Census results.

Further revisions to LFS series

ONS is developing a longer term plan for ensuring that both the LFS series in the LMS First Release and the LFS microdata are brought into line with each year's new mid-year population estimates very rapidly following their publication (for example, following the publication of the mid-2002 population estimates in August 2003). The timetable for further LFS revisions in 2003, including the timing of the release of the 2001 Census-consistent revised LFS microdata for the period 1984 to 2003, will be announced as soon as possible.

Interim LFS series in February and March 2003 LMS First Releases

These series are produced in exactly the same way as those published since November 2002. Full details of their production have been published in previous LMS First Releases and continue to be available via the National Statistics website at http://www.statistics.gov.uk/about/Methodology_by_theme/Interim_2001-Census-adjusted_LFS_estimates/default.asp.

Table 18 - Comparison of pre-2001 and post-2001 Census population data

As the data presented in this release are not consistent with the new mid-year population estimates, based on the 2001 Census, an extra table is included in the release. Table 18 compares the 2001 working age population projections for local areas included in this release with the 2001 Census-based mid-year working age

All data are not seasonally adjusted unless otherwise specified

population estimates for 2001. The table is intended to give users an indication of the magnitude of possible changes to estimates of labour market variables when revised estimates are produced. It does not contain sufficient information to accurately predict what the revised estimates will be.

Extra Jubilee Bank Holiday

The figures for total and average hours in Table 6 cover the period which includes the extra Jubilee Bank Holiday. Users should be cautious when interpreting movements involving June 2002 data.

Vacancy data

Publication of the Jobcentre vacancy series has been deferred due to distortions to the data as a result of the introduction of Employer Direct by Jobcentre Plus. This release contains vacancy data only up to April 2001.

A limited range of statistics on Jobcentre Plus vacancies, relating to the inflows of newly-notified vacancies, is now being made available on Nomis[®], though not at this stage as National Statistics. (For further details see the news and research item on page 455 of the September 2002 issue of *Labour Market Trends*.)

The introduction of Employer Direct, a major change which involves transferring the vacancy-taking process from local Jobcentres to regional Customer Service Centres, has affected the data since May 2001. Employer Direct has been gradually introduced across Great Britain as part of modernising the former Employment Service (now part of Jobcentre Plus) and has had the following effects:

- A temporary reduction in the recorded level of outflows and placings owing to some delays in following up vacancies with employers associated with the introduction of the new arrangements.
- An increase in the recorded level of newly-notified vacancies.
- Both the above effects have led to an increase in the recorded stock of unfilled vacancies.

Investigations have shown that these effects are substantial for all the vacancy series. While they cannot be quantified precisely, the effects are large enough to prevent meaningful comparisons with earlier data. Some of the distortions will also persist for a while after the full implementation of Employer Direct, which was completed in all regions at the end of January 2002. Publication of the Jobcentre vacancy series has therefore been deferred. ONS and the Department for Work and Pensions are continuing to monitor and review the data with the aim of reinstating the series as soon as possible.

All data are not seasonally adjusted unless otherwise specified

The publication of the vacancy figures for Northern Ireland has been suspended since March 1999 as a result of a discontinuity identified during the introduction of a new computer system for processing vacancies to local offices of the Department for Employment and Learning (DEL). In the course of correcting for this difficulty, further problems of a procedural nature came to light as contributory factors. These further issues have delayed the reinstatement of published vacancy figures for Northern Ireland. DEL have now introduced a new internet-based operational system for vacancies and have resumed publication of some non-seasonally adjusted vacancy data for Northern Ireland on a provisional basis. For the purposes of the seasonally adjusted United Kingdom figures it has been assumed provisionally that the Northern Ireland figures have remained constant since February 1999 as follows: 8,900 for the stock of unfilled vacancies, 3,400 for inflows of vacancies notified, 3,400 for outflows, and 2,200 for placings. These are not estimates for Northern Ireland but assumptions for the purpose of continuity of the United Kingdom series up to April 2001.

Claimant count

The introduction of Joint Claims for Jobseeker's Allowance on 19 March 2001, and its extension on 28 October 2002, means that both members of certain couples are now required to claim JSA jointly and both are required to look for work. The claimant count continues to include all individual claimants, so there are some extra claimants included as a result of these changes.

Since 19 March 2001 Joint Claims for JSA has applied to couples without dependent children where at least one member was born after 19 March 1976 and is aged over 18. Joint Claims was extended on 28 October 2002 to couples without dependent children where at least one member was born after 28 October 1957.

ONS estimates that the introduction of Joint Claims had an initial upward effect on the claimant count, which accumulated between April and August 2001, of some 600 for the East Midlands region at the time (approximately 200 men and 400 women). For the UK overall the initial impact was some 6,500 (approximately 2,200 men and 4,300 women). The effect of the extension on 28 October so far has been to add a further estimated 300 claimants (100 men and 200 women) to the count for the East Midlands region between October 2002 and January 2003 and 3,200 for the UK overall (approximately 800 men and 2,400 women). Further upward effects on the claimant count can be expected over the next month or two.

The extent to which the introduction of Joint Claims may be treated as a discontinuity in the count, following past precedent, is difficult to assess but we will continue to monitor and review the effects. For information about previous treatment of discontinuities in the claimant count see, for example, the article 'Changes to

All data are not seasonally adjusted unless otherwise specified

the coverage of the monthly count of claimant unemployment' in *Labour Market Trends*, November 1995, page 398.

BACKGROUND NOTES

1. More information on the statistics in this release can be found in the *Guide to Labour Market Statistics Releases*, available from the labour market helpline 020 7533 6094. Information is also available on the National Statistics website at <http://www.statistics.gov.uk/onlineproducts/default.asp>.
2. Some data in this release are based on statistical samples and, as such, are subject to sampling variability. If many samples were drawn, each would give a different result. The ranges shown for the LFS data in this release and in the following table represent '95 per cent confidence intervals'. It is expected that in 95 per cent of samples the range would contain the true value. For more information, see the *Guide to Labour Market Statistics Releases*.

All data are not seasonally adjusted unless otherwise specified

3. The LFS sample population covers those living in private households, student halls of residence and NHS accommodation.
4. Annual local area data from the LFS are shown in Table 13. These annual data are consistent with the best population estimates which were available before the results of the 2001 Census were published (and hence are consistent with the regional data published in this release). They are not consistent with the new mid-year estimates for 2001, based on the 2001 Census (see note on census adjustments on page 6). Data from waves one and five of four quarters of the LFS were combined with an additional sample of interviews, for the second successive year, which improves the accuracy of the annual estimates for some local areas in England. Estimates of sampling variability - '95 per cent confidence intervals' - for each region, county, unitary authority and local authority district are shown in the table. There are now three publication thresholds - two thousand and four thousand, in addition to six thousand. For further information see Volume 6 of the *LFS User Guide*. This guide, along with additional data and further background information, are available on the National Statistics website at <http://www.statistics.gov.uk/lfs>. A wide range of annual local area data from the LFS is available free from the Nomis[®] website at <http://www.nomisweb.co.uk>.
5. Not seasonally adjusted claimant count and vacancies data are gathered from administrative sources and constitute a complete count. However, seasonally adjusted totals are presented as rounded to the nearest hundred to avoid spurious precision. Any differences between the sum of the rounded seasonally adjusted figures and the UK totals are due to this rounding.
6. Claimant count flows are the number of people joining or leaving the count in the period between the count dates. They are therefore affected by the number of weeks between count dates. To enable comparisons from month to month, the flows figures are standardised to a 4.33-week month before seasonal adjustment.
7. The number of Jobseeker's Allowance (JSA) claimants can be expressed as a proportion of either (a) the corresponding mid-year estimate (or the latest available mid-year estimate, currently for June 2000) of the workforce jobs in the area plus the number of claimants, or (b) the resident working age population. The number of workforce jobs is mainly collected through postal employer surveys and comprises employee jobs, self-employment jobs, HM armed forces and government-supported trainees and is used to calculate rates for regions and the countries of the UK. For smaller areas, proportions based on the resident working age populations are used.

All data are not seasonally adjusted unless otherwise specified

8. The count of JSA claimants is mostly derived from the Jobcentre Plus computer records. However for various reasons, e.g. when a claimant's National Insurance number is not known, a few claims have to be dealt with manually by local offices. These claims, which amount to less than 1 per cent of the total, are thus counted separately and not analysed in as much detail as the computerised claims. In particular, only the computerised claims are analysed by age and duration on a monthly basis.
9. Travel-to-Work areas (Table 15) are approximations to self-contained labour markets, i.e. areas where people both live and work.
10. NUTS (Nomenclature des Unités Territoriales Statistiques) (Table 17) was established by the Statistical Office of the European Union (Eurostat) to provide a uniform breakdown of territorial units for the production of regional statistics. NUTS is a five-level hierarchical classification.
11. The employee jobs series is based on data from employer surveys and is subject to sampling variability. The nature of the survey means that the size of this sampling variability may not be consistent from year to year. Provisionally ONS would expect that the 95 per cent confidence interval would on average be within +/- 6 per cent of the estimate. However, this will vary from region to region.
12. Labour market statistics are compiled from a wide range of sources. Claimant count and Jobcentre vacancy data are provided from the Jobcentre Plus administrative system, workforce jobs are derived from ONS business surveys, other data come from the ONS Labour Force Survey.
13. The Social Survey Division of ONS carries out the questionnaire design, sample selection and interviewing for the LFS. Analysis and publication of the results of the survey is undertaken by Labour Market Division. In Northern Ireland, the Labour Force Survey is conducted by the Central Survey Unit.
14. In addition to the data in this release, ONS can provide a wide range of detailed labour market data in a number of formats. In particular, data are available from Nomis[®] at the same time as this release is published. Further data are also published in *Labour Market Trends (LMT)* and the *Labour Force Survey Quarterly Supplement to LMT*.
15. Some of the series in the attached tables are also available on the National Statistics website. To access all the data from the Labour Market Statistics Integrated First Release (including series in this release where four-letter series identifiers are shown), click on the Time Series Data option and download

All data are not seasonally adjusted unless otherwise specified

the complete release, or view and download your own customised selection of series. You will also find other Labour Market releases within the Time Series Data service called Employment and Earnings and Claimant Count and Vacancies, which contain more data. Datasets of selected series can also be viewed by choosing topics within the Labour Market theme on our website (<http://www.statistics.gov.uk/labour>). For more information about the Time Series Data service or datasets, telephone +44 (0) 20 7533 5675 or email statbase@statistics.gov.uk.

16. Details of the policy governing the release of new data are available from the press office. Also available is a list of the names of those given pre-publication access to the contents of this release.
17. **National Statistics** are produced to high professional standards set out in the National Statistics Code of Practice. They undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference. © Crown Copyright 2003.

Workforce jobs enquiries 01633 812318

The Workforce Jobs series measures jobs rather than people, therefore, second self-employment jobs (where the main job is an employee) are now included in this series.

Civilian Workforce Jobs figures come from a variety of sources. Employee Jobs (which is much the largest component of Civilian Workforce Jobs) come from quarterly surveys of employers carried out by Prices & Business Group (PBG) of ONS and Administrative Returns. Self-employment jobs figures are provided by the LFS and Government-supported trainees figures are provided by ES Training Data Systems.

The civilian workforce jobs data in this table have been adjusted to reflect the 2001 Census population data - see note on page 6.

* The figures for self-employment jobs are not shown as they are not considered of publishable quality.

Source: Employer surveys

Workforce jobs enquiries 01633 812318

Employee jobs figures are of a measure of jobs rather than people. For example, if a person holds two jobs, each job will be counted in the employee jobs total. Employees jobs figures come from quarterly surveys of employers carried out by Prices & Business Group (PBG) of ONS and Administrative returns.

The quarterly employer surveys used to compile employee jobs figures do not collect data by Government Office Regions (GOR). Instead, Annual Business Inquiry (ABI) data are used to pro-rate the totals obtained from the quarterly surveys to generate GOR data. This technique can lead to the sum of the industry figures not matching the "All jobs" total in column 2.

* Count of claimants of Jobseeker's Allowance

Source: Jobcentre Plus administrative system

Labour Market Statistics Helpline 020 7533 6094

Denominator = claimant count + workforce jobs. NB these are different from the proportions of the working age populations claiming Jobseeker's Allowance for local areas shown in Tables 14 and 17. See note on page 5 for further details.

The claimant count inflows, standardised to a 4.33 week month but not seasonally adjusted, for January 2003 were 15,629 in total, 10,916 for men and 4,714 for women. The corresponding outflow figures were 6,551 men and 2,777 women.

** Flow figures are collected for 4 or 5 week periods between count dates; the figures are then converted to a standard 4 1/3 week month.

Months where there are 5 weeks between count dates. All the rest are 4 week periods.

Workforce jobs, which are used in the denominators for rates in this table, have not been adjusted to reflect the 2001 Census population data - see note on page 6.
