Labour market statistics

July 2003: East Midlands

All data are not seasonally adjusted unless otherwise specified

Latest Labour Force Survey data over the year to May 2003 indicate employment and unemployment stable in the East Midlands.

Data for the three months to May 2003 show the seasonally adjusted employment rate at 76.1 per cent, down 0.4 percentage points on a year earlier. The seasonally adjusted unemployment rate was 4.2 per cent, down 0.1 percentage point on a year earlier.

The seasonally adjusted claimant count was up in the year to June 2003.

Data in this table are seasonally adjusted unless otherwise stated

		Level (thousands)	Rate (%)	Change on year (level)	Sampling variability (thousands)	Change on year (rate)	Sampling variability (%)
Employment*	Mar-May	2,019	76.1	12	± 53	-0.4	± 1.7
Unemployment**	Mar-May	88	4.2	-1	± 17	-0.1	± 0.8
Economically active*	Mar-May	2,108	79.4	11	± 53	-0.4	± 1.6
Economically inactive+ of which	Mar-May	527	20.6	13	± 54	0.4	± 1.6
Not wanting a job+	Mar-May	402		26	± 48		
Wanting a job+	Mar-May	125		-13	± 30		
Civilian workforce jobs (not seasonally adjusted)	Mar 2003	1,943		-23	..		
Claimant count	Jun 2003	60.4	3.0**	1.6		0.1	

See background note 2 on sampling variability.

* Levels are for those aged 16 and over, rates are for those of working age (16-59/64).

** Levels and rates are for those aged 16 and over. Rate is as a proportion of economically active.

+ Levels and rates are for those of working age.

++ Denominator = claimant count + workforce jobs. For regional claimant count proportions, using resident working age populations see Table 17. See note on page 7 for further details.

.. Not available.

From May 2001: vacancy series deferred (see note on page 8).

New this month:

March to May 2003 data: latest three-month average LFS results;

June 2003 data: claimant count;

March 2003 data: workforce jobs.

All data are not seasonally adjusted unless otherwise specified

Employment (tables 1 to 6)

The seasonally adjusted LFS estimate of employment in the East Midlands was 76.1 per cent in the March to May 2003 period, down 0.4 percentage points on the same period a year earlier. The employment level was 2.02 million in the March to May 2003 period, up 12,000 on the same period a year earlier.

LFS estimates indicate an increase in both the number of employees and self-employed over the past year.

LFS estimates suggest an increase in both the number of full-time workers and part-time workers over the past year.

Seasonally adjusted employee jobs figures were down 14,000 in the quarter to March 2003.

Not seasonally adjusted employee jobs were down 35,000 in the year to March 2003. This was mainly due to falls in the manufacturing and service industries.

Unemployment (table 1)

The seasonally adjusted unemployment rate in the East Midlands was 4.2 per cent in the March to May 2003 period, down 0.1 percentage point on the same period a year earlier. The rates for men and women in March to May 2003 were 4.5 and 3.8 per cent respectively.

Employee jobs by industry

Change on year from March 2002

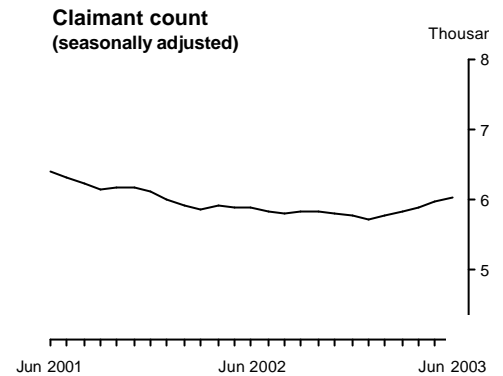

All data are not seasonally adjusted unless otherwise specified

Claimant count (tables 7 and 8)

The seasonally adjusted claimant count rate in June 2003 was 3.0 per cent, unchanged from May 2003, and up 0.1 percentage point since June 2002. The seasonally adjusted number of claimants in June 2003 was 60,400, up 600 on May 2003, and up 1,600 since June 2002. The not seasonally adjusted number of claimants was 59,600 in June 2003.

The not seasonally adjusted number of computerised claims of people aged 18 to 24 was 15,600 in June 2003, up 1,100 over the year. Changes in the number of computerised claims for all other age and duration groups over the year were mixed.

Economically active (tables 1 and 9)

The seasonally adjusted LFS estimate of economically active people in the East Midlands was 2.11 million in the March to May 2003 period.

Economically inactive (tables 1, 10 and 11)

The seasonally adjusted LFS estimate of economically inactive people in the East Midlands in the March to May 2003 period was 1.22 million, with 527,000 of these of working age. Over the year the number of economically inactive people of working age was up 13,000.

Vacancies (table 12)

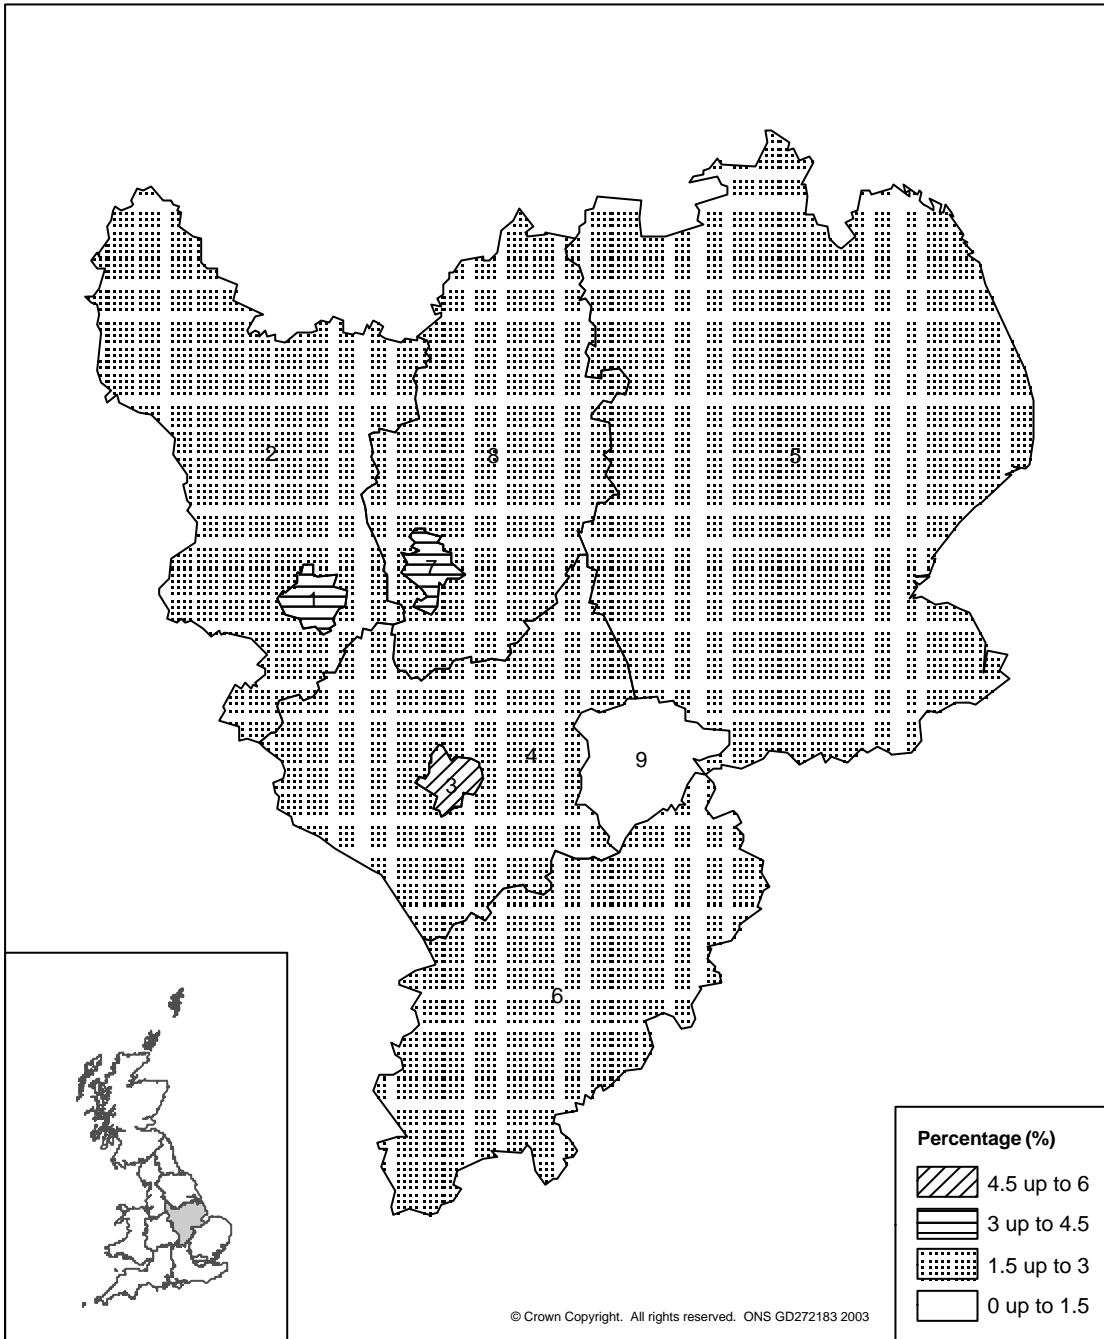

Publication of the seasonally adjusted Jobcentre vacancy series has been deferred. Figures from May 2001 are affected by the introduction of Employer Direct – see note on page 8.

Local area data (table 17)

The claimant count as a proportion of the resident working age population was lowest in Rutland UA, at 0.5 per cent. It was highest in Leicester UA, at 5.9 per cent.

All data are not seasonally adjusted unless otherwise specified

Claimant count as a proportion of the resident working age population, by County/UA
 June 2003 - East Midlands

1	Derby UA	3.4%
2	Derbyshire	2.0%
3	Leicester UA	5.9%
4	Leicestershire	1.6%
5	Lincolnshire	1.6%
6	Northamptonshire	2.0%
7	Nottingham UA	4.3%
8	Nottinghamshire	1.9%
9	Rutland UA	0.5%

REVISIONS

There are no significant revisions this month to the data in this release.

THIS MONTH

In this month's release four new tables are introduced (one for each of the four local area geographies: local authorities, parliamentary constituencies, travel-to-work areas and NUTS 3 areas) which present a framework of labour market statistics in order to give a better overall picture of the labour market for the local area. The tables are structured to present indicators on labour supply, labour demand and claimants of the Jobseekers' Allowance (JSA) working age benefit. This structure adheres to the labour accounting system described in the Framework Review of labour market statistics published on 5 August 2002 (see http://www.statistics.gov.uk/methods_quality/quality_review/downloads/LMSFR_Final.doc). A new labour demand indicator, jobs density, is included in these tables. The jobs density is the total number of jobs in the area (including employees, self-employed, government-supported trainees and armed forces personnel) divided by the number of working age residents of the area. The data in the Framework tables are annual, and come from a number of different sources.

As the new Framework tables contain annual Labour Force Survey (LFS) data, the table containing an annual local area LFS summary has been discontinued. Also, the tables giving monthly JSA claimant data will be retained for local authorities and parliamentary constituencies, but have been discontinued for travel-to-work areas and NUTS 3 areas. JSA claimant data for travel-to-work areas and NUTS 3 areas will continue to be available electronically, via Nomis[®].

SPECIAL

Interim Labour Force Survey (LFS) estimates consistent with the 2001 Census

Regional LFS estimates

The publication, in February 2003, of Census 2001-consistent population estimates at local authority level has allowed the production of interim regional LFS estimates for the first time. Regional estimates consistent with the 2001 Census have been produced and were first published in the April 2003 release.

The population data published in February only covered periods up to mid-2001. Regional population totals for 2002-3 are derived from two separate sources. Totals for the countries of the UK are based on the 2001 Census-consistent interim projections

All data are not seasonally adjusted unless otherwise specified

published by the Government Actuary's Department (GAD) in November 2002. Totals for the English regions are calculated by applying the growth rates from the published 2000-based sub-national projections (consistent with 1991-based population totals) to the revised regional estimates for 2001. The totals calculated for 2002-3 were then constrained to the interim GAD projections for England referred to above.

Interim regional estimates have been produced for all periods back to the three-month period ending February 1997. Regional level LFS time series for earlier periods will be compiled and released as part of ONS's full LFS reweighting exercise in November 2003. Estimates for geographies below regions have not been reweighted using the interim method, but these also will be released in November 2003.

The methodology used to produce the interim regional LFS estimates is broadly consistent with that used to produce the UK interim LFS estimates. In broad terms, the old and new population data by age and sex were used to produce a matrix of adjustment factors for each region. These were then applied to the pre-2001 Census regional LFS estimates by sex and age. Where no age breakdown was available (as for full-time/part-time workers) these were scaled to the new reweighted totals.

Users of the interim regional LFS estimates should note that the interim methodology used does not achieve full additivity between the regional estimates and the national LFS estimates (though the differences are small). Full additivity in the series will be restored by the full reweighting exercise in November 2003.

Guidance notes and details of the methodology used for producing the interim LFS estimates are available in a paper on the website at

http://www.statistics.gov.uk/about/Methodology_by_theme/Interim_2001-Census-adjusted_LFS_estimates/default.asp.

Keeping LFS and population estimates consistent

During 2002, ONS introduced a new system in which interim, revised LFS time series, consistent with the 2001 Census, were published very soon after the publication of the necessary population data. Moving on from this innovation, ONS's aim is to ensure that its published LFS estimates continue to be kept closely in line with the latest published population data.

By 2005, re-engineered LFS systems will be in place that will enable the latest mid-year population estimate (MYE) to be incorporated into both revised LFS time series and revised microdata in September, following the release of each year's MYE in August.

All data are not seasonally adjusted unless otherwise specified

In the years 2003 and 2004, ONS will issue interim, revised LFS time series in the September of each year which incorporate the latest MYE published in August. For example, in 2003, the 2002 MYE will be published in August, followed by the publication in September of revised LFS time series for periods after the unchanged mid-2001 base.

In 2003 and 2004, also, the revised LFS microdata, and the final revised LFS time series based on this, will be published in the November of each year. This means that in September and October of each year, the LFS microdata for the previous two years or so will not be consistent with the interim, revised LFS time series. It also means that the June to August LFS microdata will be released in November, consistent with the latest population MYE, rather than, as previously, in October.

Each year's LFS seasonal adjustment review will be scheduled to coincide with the publication of the revised LFS microdata in order to avoid an additional occasion each year when revisions are made. Moreover, ONS and the Government Actuary's Department will be working together to ensure that the population data used for revising LFS series and microdata are in line with the latest population projections.

Further details are given on the National Statistics website at http://www.statistics.gov.uk/about/Methodology_by_theme/downloads/Keeping_LFS_estimates_in_line.pdf.

Claimant count rates

Following the recommendations in the LMS Framework Review, the workplace-based claimant count rates for sub-regional areas have been withdrawn from National Statistics and have ceased to appear in ONS publications. Users wishing to calculate the rates themselves will be able to continue to do so, using information readily accessible via the Nomis[®] website (<http://www.nomisweb.co.uk>).

ONS is now publishing local area claimant count figures as a proportion of the resident working age population for local authorities (and corresponding data for NUTS 3 areas are available on Nomis[®]), using the mid-2001 population estimates published by ONS on 10 October 2002. Comparable figures for countries and regions of the United Kingdom are also published.

When the necessary ward-level working age population data are available from the 2001 Census, ONS will use these to calculate and publish residence-based claimant count proportions for travel-to-work areas and parliamentary constituencies. The claimant count proportions for parliamentary constituencies will be published in the regional First Releases and on Nomis[®]; the data for travel-to-work areas will be available on Nomis[®].

All data are not seasonally adjusted unless otherwise specified

The release of the necessary ward-level census is due on 30 June. Publication of the residence-based claimant count proportions for parliamentary constituencies and travel-to-work areas will be on 17 September 2003.

Tables 13 to 16: Local labour market indicators and Table 19: Comparison of pre-2001 and post-2001 Census population data

Tables 13 to 16 present a framework of labour market statistics for local areas. Data are presented as indicators of labour supply, labour demand and benefits. This structure adheres to the labour accounting system described in the Framework Review of labour market statistics published on 5 August 2002 (see http://www.statistics.gov.uk/methods_quality/quality_review/downloads/LMSFR_Final.doc).

These tables include data from the annual local area Labour Force Survey. Interim reweighting of monthly LFS estimates at national and regional level has been applied in order to take account of the 2001 Census results. For the annual local area LFS data such an interim reweighting is not possible. These annual tables will be brought into line with the 2001 Census using the same full reweighting method to be applied to the main LFS in November 2003. The revised annual tables will be published in December 2003. For more information on the annual local area Labour Force Survey, see background note 4.

Table 19 compares the 2001 working age population projections for local areas included in this release with the 2001 Census-based mid-year working age population estimates for 2001. The table is intended to give users an indication of the magnitude of possible changes to estimates of labour force survey variables when revised estimates are produced. It does not contain sufficient information to accurately predict what the revised estimates will be.

Vacancy data

Publication of the Jobcentre vacancy series has been deferred due to distortions to the data as a result of the introduction of Employer Direct by Jobcentre Plus.

A limited range of statistics on Jobcentre Plus vacancies, relating to the inflows of newly-notified vacancies, is now being made available on Nomis[®], though not at this stage as National Statistics. (For further details see the news and research item on page 455 of the September 2002 issue of *Labour Market Trends*.)

The introduction of Employer Direct, a major change which involves transferring the vacancy-taking process from local Jobcentres to regional Customer Service Centres, has affected the data since May 2001. Employer Direct has been gradually

introduced across Great Britain as part of modernising the former Employment Service (now part of Jobcentre Plus) and has had the following effects:

- A temporary reduction in the recorded level of outflows and placings owing to some delays in following up vacancies with employers associated with the introduction of the new arrangements.
- An increase in the recorded level of newly-notified vacancies.
- Both the above effects have led to an increase in the recorded stock of unfilled vacancies.

Investigations have shown that these effects are substantial for all the vacancy series. While they cannot be quantified precisely, the effects are large enough to prevent meaningful comparisons with earlier data. Some of the distortions will also persist for a while after the full implementation of Employer Direct, which was completed in all regions at the end of January 2002. Publication of the Jobcentre vacancy series has therefore been deferred. ONS and the Department for Work and Pensions are continuing to monitor and review the data with the aim of reinstating the series as soon as possible.

The publication of the vacancy figures for Northern Ireland has been suspended since March 1999 as a result of a discontinuity identified during the introduction of a new computer system for processing vacancies to local offices of the Department for Employment and Learning (DEL). In the course of correcting for this difficulty, further problems of a procedural nature came to light as contributory factors. These further issues have delayed the reinstatement of published vacancy figures for Northern Ireland. DEL have now introduced a new internet-based operational system for vacancies and have resumed publication of some non-seasonally adjusted vacancy data for Northern Ireland on a provisional basis.

Claimant count

The introduction of Joint Claims for Jobseeker's Allowance on 19 March 2001, and its extension on 28 October 2002, means that both members of certain couples are now required to claim JSA jointly and both are required to look for work. The claimant count continues to include all individual claimants, so there are some extra claimants included as a result of these changes.

Since 19 March 2001 Joint Claims for JSA has applied to couples without dependent children where at least one member was born after 19 March 1976 and is aged over 18. Joint Claims was extended on 28 October 2002 to couples without dependent children where at least one member was born after 28 October 1957.

All data are not seasonally adjusted unless otherwise specified

ONS estimates that the introduction of Joint Claims had an initial upward effect on the claimant count, which accumulated between April and August 2001, of some 600 for the East Midlands region at the time (approximately 200 men and 400 women). For the UK overall the initial impact was some 6,500 (approximately 2,200 men and 4,300 women). The total effect of the extension on 28 October has been to add a further estimated 350 claimants (100 men and 250 women) to the count for the East Midlands region between October 2002 and February 2003 and 3,800 for the UK overall (approximately 900 men and 2,900 women).

The extent to which the introduction of Joint Claims may be treated as a discontinuity in the count, following past precedent, is difficult to assess but we will continue to monitor and review the effects. For information about previous treatment of discontinuities in the claimant count see, for example, the article 'Changes to the coverage of the monthly count of claimant unemployment' in *Labour Market Trends*, November 1995, page 398.

BACKGROUND NOTES

1. More information on the statistics in this release can be found in the *Guide to Labour Market Statistics Releases*, available from the labour market helpline 020 7533 6094. Information is also available on the National Statistics website at <http://www.statistics.gov.uk/onlineproducts/default.asp>.
2. Some data in this release are based on statistical samples and, as such, are subject to sampling variability. If many samples were drawn, each would give a different result. The ranges shown for the LFS data in this release and in the following table represent '95 per cent confidence intervals'. It is expected that in 95 per cent of samples the range would contain the true value. For more information, see the *Guide to Labour Market Statistics Releases*.

March to May 2003

- The LFS sample population covers those living in private households, student halls of residence and NHS accommodation.
- Annual local area data from the LFS are included in Tables 13 to 16. These annual data are consistent with the best population estimates which were available before the results of the 2001 Census were published (and hence are not consistent with the regional data published in this release). Interim reweighting of monthly LFS estimates at national and regional level has been applied in order to take account of the 2001 Census results. For the annual local area LFS data such an interim reweighting is not possible. These annual tables will be brought into line with the 2001 Census using the same full reweighting method to be applied to the main LFS in November 2003. The revised annual tables will be published in December 2003. The annual LFS database is compiled by taking data from waves one and five of four quarters of the LFS and combining them with an additional sample of interviews. This sample boost was introduced in 2000 and has improved the accuracy of the annual estimates for some local areas in England and all local areas in Wales (a boost was also introduced in Scotland for the 2003/04 survey, and the results of this survey will be published in autumn 2004). There are now different publication thresholds for annual LFS data, depending on the size of the sample boost in the area. The thresholds are six thousand, four thousand, two thousand and as low as one thousand for some areas in Wales. For further information see Volume 6 of the *LFS User Guide*. This guide, along with additional data and further background information, are available on the National Statistics website at <http://www.statistics.gov.uk/lfs>. A wide range of annual local area data from the LFS is available free from the Nomis[®] website at <http://www.nomisweb.co.uk>.

5. Not seasonally adjusted claimant count and vacancies data are gathered from administrative sources and constitute a complete count. However, seasonally adjusted totals are presented as rounded to the nearest hundred to avoid spurious precision. Any differences between the sum of the rounded seasonally adjusted figures and the UK totals are due to this rounding.
6. Claimant count flows are the number of people joining or leaving the count in the period between the count dates. They are therefore affected by the number of weeks between count dates. To enable comparisons from month to month, the flows figures are standardised to a 4.33-week month before seasonal adjustment.
7. The number of Jobseeker's Allowance (JSA) claimants can be expressed as a proportion of either (a) the corresponding mid-year estimate (or the latest available mid-year estimate, currently for June 2000) of the workforce jobs in the area plus the number of claimants, or (b) the resident working age population. The number of workforce jobs is mainly collected through postal employer surveys and comprises employee jobs, self-employment jobs, HM armed forces and government-supported trainees and is used to calculate rates for regions and the countries of the UK. For smaller areas, proportions based on the resident working age populations are used.
8. The count of JSA claimants is mostly derived from the Jobcentre Plus computer records. However for various reasons, e.g. when a claimant's National Insurance number is not known, a few claims have to be dealt with manually by local offices. These claims, which amount to less than 1 per cent of the total, are thus counted separately and not analysed in as much detail as the computerised claims. In particular, only the computerised claims are analysed by age and duration on a monthly basis.
9. Travel-to-Work areas (Table 15) are approximations to self-contained labour markets, i.e. areas where people both live and work.
10. NUTS (Nomenclature des Unités Territoriales Statistiques) (Table 16) was established by the Statistical Office of the European Union (Eurostat) to provide a uniform breakdown of territorial units for the production of regional statistics. NUTS is a five-level hierarchical classification.
11. The employee jobs series is based on data from employer surveys and is subject to sampling variability. The nature of the survey means that the size of this sampling variability may not be consistent from year to year. Provisionally ONS would

expect that the 95 per cent confidence interval would on average be within +/- 6 per cent of the estimate. However, this will vary from region to region.

12. Labour market statistics are compiled from a wide range of sources. Claimant count and Jobcentre vacancy data are provided from the Jobcentre Plus administrative system, workforce jobs are derived from ONS business surveys, other data come from the ONS Labour Force Survey.
13. The Social and Vital Statistics Division of ONS carries out the questionnaire design, sample selection and interviewing for the LFS. Analysis and publication of the results of the survey is undertaken by Labour Market Division. In Northern Ireland, the Labour Force Survey is conducted by the Central Survey Unit.
14. In addition to the data in this release, ONS can provide a wide range of detailed labour market data in a number of formats. In particular, data are available from Nomis[®] at the same time as this release is published. Further data are also published in *Labour Market Trends (LMT)* and the *Labour Force Survey Quarterly Supplement to LMT*.
15. Some of the series in the attached tables are also available on the National Statistics website. To access all the data from the Labour Market Statistics Integrated First Release (including series in this release where four-letter series identifiers are shown), click on the Time Series Data option and download the complete release, or view and download your own customised selection of series. You will also find other Labour Market releases within the Time Series Data service called Employment and Earnings and Claimant Count and Vacancies, which contain more data. Datasets of selected series can also be viewed by choosing topics within the Labour Market theme on our website (<http://www.statistics.gov.uk/labour>). For more information about the Time Series Data service or datasets, telephone 020 7533 5675 or email statbase@statistics.gov.uk.
16. Details of the policy governing the release of new data are available from the press office. Also available is a list of the names of those given pre-publication access to the contents of this release.
17. **National Statistics** are produced to high professional standards set out in the National Statistics Code of Practice. They undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference. © Crown Copyright 2003.

Data source: Labour Force Survey

* Denominator = all persons of working age.

Labour Market Statistics Helpline 020 7533 6094

** Denominator = Total economically active.

† Labour Force Survey is tabulated by region of residence.

+ Quarter to quarter changes at regional level are particularly subject to sampling variability and should be interpreted in the context of changes over several quarters rather than in isolation.

The Labour Force Survey is a survey of the population in private households, student halls of residence and NHS accommodation.

Some of the series in this table are available electronically through the ONS Time Series Data service. See background note 15 for further details.

Due to slight methodological differences between the way the national and regional LFS estimates have been interim adjusted for the 2001 Census, there may be small differences between the UK totals and the sum of the regional components.

Relationship between columns: 1= 2+3; 4= 6+8

Labour Market Statistics Helpline 020 7533 6094

* Count of claimants of Jobseeker's Allowance

** Workforce jobs is tabulated by region of workplace. Claimant count is tabulated by region of claimant's residence.

+ Denominator = claimant count + workforce jobs. NB: these are different from the proportions of the working age populations claiming Jobseeker's Allowance for local areas shown in Table 17.

See note on page 7 for further details.

Some of the series in this table are available electronically through the ONS Time Series Data service. See background note 15 for further details.

The civilian workforce jobs data in this table have been adjusted to reflect the 2001 Census population data - see note on page 5.

* Count of claimants of Jobseeker's Allowance

Labour Market Statistics Helpline 020 7533 6094

** Denominator = claimant count + workforce jobs. NB these are different from the proportions of the working age populations claiming Jobseeker's Allowance for local areas shown in Table 17.

Data source: Employer surveys, DfES Training Data System, Jobcentre Plus administrative system.

See note on page 7 for further details.

Months where there are 5 weeks between count dates. All the rest are 4 week periods.

The civilian workforce jobs data in this table have been adjusted to reflect the 2001 Census population data - see note on page 5.

Workforce jobs enquiries 01633 812318

The Workforce Jobs series measures jobs rather than people, therefore, second self-employment jobs (where the main job is an employee) are now included in this series.

Civilian Workforce Jobs figures come from a variety of sources. Employee Jobs (which is much the largest component of Civilian Workforce Jobs) come from quarterly surveys of employers carried out by Prices & Business Group (PBG) of ONS and Administrative Returns.

Self-employment jobs figures are provided by the LFS and Government-supported trainees figures are provided by ES Training Data Systems.

The civilian workforce jobs data in this table have been adjusted to reflect the 2001 Census population data - see note on page 5.

Source: Employer surveys

Workforce jobs enquiries 01633 812318

Employee jobs figures are of a measure of jobs rather than people. For example, if a person holds two jobs, each job will be counted in the employee jobs total. Employees jobs figures come from quarterly surveys of employers carried out by Prices & Business Group (PBG) of ONS and Administrative returns.

The quarterly employer surveys used to compile employee jobs figures do not collect data by Government Office Regions (GOR). Instead, Annual Business Inquiry (ABI) data are used to pro-rate the totals obtained from the quarterly surveys to generate GOR data. This technique can lead to the sum of the industry figures not matching the "All jobs" total in column 2.

* Count of claimants of Jobseeker's Allowance

Source: Jobcentre Plus administrative system

Labour Market Statistics Helpline 020 7533 6094

Denominator = claimant count + workforce jobs. NB these are different from the proportions of the working age populations claiming Jobseeker's Allowance for local areas shown in Table 17. See note on page 7 for further details.

The claimant count inflows, standardised to a 4.33 week month but not seasonally adjusted, for June 2003 were 13,638 in total, 9,600 for men and 4,038 for women. The corresponding outflow figures were 10,437 men and 4,215 women.

** Flow figures are collected for 4 or 5 week periods between count dates; the figures are then converted to a standard 4 1/3 week month.

Months where there are 5 weeks between count dates. All the rest are 4 week periods.

* Count of claimants of Jobseeker's Allowance

Source: Jobcentre Plus administrative system

Relationship between columns: 2= 3+4+5; 8= 9+10+11

Labour Market Statistics Helpline 020 7533 6094

Months where there are 5 weeks between count dates. All the rest are 4 week periods.

Only computerised claims are analysed by age and duration on a monthly basis. These figures therefore differ in total from those given in Table 7. The latter include clerically processed claims which currently amount to less than 1 per cent of the total claimant count. See background note 8.

* Count of claimants of Jobseeker's Allowance

Source: Jobcentre Plus administrative system

Relationship between columns: 14=15+16+17; 20=21+22=23

Labour Market Statistics Helpline 020 7533 6094

Months where there are 5 weeks between count dates. All the rest are 4 week periods.

Only computerised claims are analysed by age and duration on a monthly basis. These figures therefore differ in total from those given in Table 7. The latter include clerically processed claims which currently amount to less than 1 per cent of the total claimant count. See background note 8.

+ Official mid-2001 population estimates.

Labour Market Statistics Helpline 020 7533 6094

++ LFS data relate to the period March 2001 to February 2002. LFS sample covers working age (16-59/64) population living in private households, student halls of residence and NHS accommodation. The LFS data in this table have not been adjusted to reflect the 2001 Census population data - see note on page 5.

+++ Unemployment rates calculated as percentage of 16+ economically active population.

Count of claimants of Jobseeker's Allowance. Average for January 2001 to December 2001.

Percentage of resident working age population of area. NB these are different from the national and regional claimant rates shown in Tables 1a, 7 and the summary of other headline indicators. See note on page 7 for further details.

Labour demand is jobs plus vacancies - data on vacancies will be included here when they become available for local areas.

* Sample size too small for reliable estimate.

** Total jobs are employees, self-employed, HM Forces and government-supported trainees. Jobs density are calculated as the number of jobs per working age (16-59/64) residents.

Percentages of resident working age population claiming Jobseeker's Allowance for these areas will be published once the 2001 Census ward level data are available.

* Count of claimants of Jobseeker's Allowance

Relationship between columns = 3=1+2; 9=7+8

The working age population figures, and therefore the proportions claiming Jobseeker's Allowance, are not yet available for these areas.

See note on page 7 for further details.
