Labour market statistics September 2007: East Midlands

All data are not seasonally adjusted unless otherwise specified

Labour Force Survey data for the East Midlands indicate the trend in the employment rate may be levelling off after decreasing, and the latest rate is not significantly different from a year ago. The trend in the unemployment rate is decreasing, but the latest rate is not significantly different from a year ago.

Data for the three months to July 2007 show the seasonally adjusted employment rate at 76.1 per cent, down 0.4 percentage points on a year earlier. The seasonally adjusted unemployment rate was 5.1 per cent, down 0.3 percentage points on a year earlier.

The seasonally adjusted claimant count was down in the year to August 2007.

Economically inactive+ of which:	May-Jul 07	526	19.7	21	± 57	0.7	± 1.6
Not wanting a job+	May-Jul 07	388		15	± 50		
Wanting a job+	May-Jul 07	138		6	± 31		
Civilian workforce jobs (not seasonally adjusted)	Jun 2007	2,151		33	..		
Claimant count	Aug 2007	58.2	2.7 ⁺⁺	-5.0		-0.2	

See note on page 8 on sampling variability.

* Levels are for those aged 16 and over, rates are for those of working age (16-59/64).

** Levels and rates are for those aged 16 and over. Rate is as a proportion of economically active.

+ Levels and rates are for those of working age.

++ Denominator = claimant count + workforce jobs. For regional claimant count proportions, using resident working age populations see Tables 16 and 17. See Concepts and Definitions.

.. Not available.

New this month:

May to July 2007 data: latest three-month average LFS results;

August 2007 data: claimant count;

June 2007 data: civilian workforce jobs.

All data are not seasonally adjusted unless otherwise specified

Employment and Jobs (tables 1 to 6)

The seasonally adjusted LFS estimate of employment in the East Midlands was 76.1 per cent in the May to July 2007 period, down 0.4 percentage points on the same period a year earlier. The employment level was 2.11 million in the May to July 2007 period, down 5,000 on the same period a year earlier.

LFS estimates indicate a decrease in the number of employees and an increase in the number of self employed over the past year.

LFS estimates suggest a decrease in both the number of full-time workers and in the number of part-time workers over the past year.

Seasonally adjusted employee jobs figures were down 2,000 in the quarter to June 2007.

Not seasonally adjusted employee jobs were up 13,000 in the year to June 2007. This was due to rises in construction, and service sector jobs.

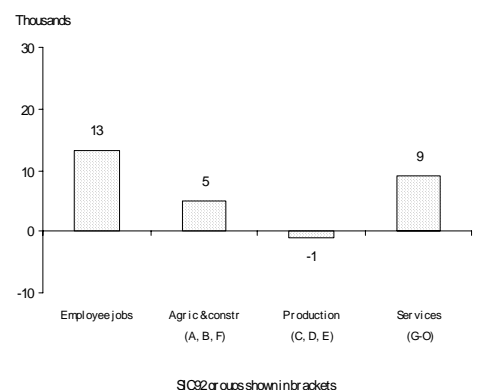

Unemployment (table 1)

The seasonally adjusted unemployment rate in the East Midlands was 5.1 per cent in the May to July 2007 period, down 0.3 percentage points on the same period a year earlier. The rates for both men and women in May to July 2007 were 4.8 per cent and 5.4 per cent respectively.

Employee jobs by industry

Change on year from June 2006

All data are not seasonally adjusted unless otherwise specified

Claimant count (tables 7 and 8)

The seasonally adjusted claimant count rate in August 2007 was 2.7 per cent, unchanged from July 2007, and down 0.2 percentage points since August 2006. The seasonally adjusted number of claimants in August 2007 was 58,200, down 400 on July 2007, and down 5,000 since August 2006.

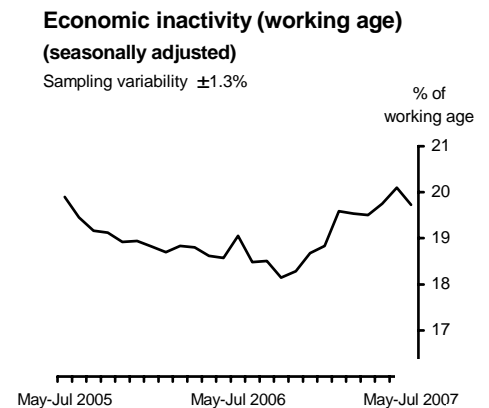

Economically active (tables 1 and 9)

The seasonally adjusted LFS estimate of economically active people in the East Midlands was 2.22 million in the May to July 2007 period.

Economically inactive (tables 1, 10 and 11)

The seasonally adjusted working age economic inactivity rate in the East Midlands in May to July 2007 was 19.7 per cent, up 0.7 percentage points from a year earlier.

The level of economically inactive people in the May to July 2007 period was 1.25 million, with 526,000 of these of working age, up 21,000 on the same period a year earlier.

Local area data (table 16)

The claimant count as a proportion of the resident working age population was lowest in Rutland UA, at 0.7 per cent. It was highest in Leicester UA, at 4.5 per cent.

All data are not seasonally adjusted unless otherwise specified

Claimant count as a proportion of the resident working age population, by County/UA

August 2007 - East Midlands

1	Derby UA	2.9%
2	Derbyshire	1.8%
3	Leicester UA	4.5%
4	Leicestershire	1.4%
5	Lincolnshire	2.0%
6	Northamptonshire	2.0%
7	Nottingham UA	4.0%
8	Nottinghamshire	1.7%
9	Rutland UA	0.7%

BASIC QUALITY INFORMATION

REVISIONS

There are no significant revisions in this month's release.

KEY QUALITY ISSUES

Detailed information about sampling variability and trends can be found in the following pages.

Summary Quality Report: A Summary Quality Report for this First Release can now be found on the website at:

<http://www.statistics.gov.uk/cci/article.asp?ID=1354>

Common pitfalls in interpreting series: Expectations of accuracy and reliability in sample surveys are often too high. Revisions and sampling variability are inevitable consequences of the trade off between timeliness, accuracy and the burden on respondents. Details of sampling variability are included elsewhere in this release.

Very few statistical revisions arise as a result of 'errors' in the popular sense of the word. All estimates, by definition, are subject to statistical 'error' but in this context the word refers to the uncertainty in any process or calculation that uses sampling, estimation or modelling. Most revisions reflect either the adoption of new statistical techniques or the incorporation of new information which allows the statistical error of previous estimates to be reduced. Only rarely are there avoidable 'errors' such as human or system failures, and such mistakes are made quite clear when they are discovered and corrected.

RELIABILITY

One indication of the reliability of the key indicators in this release can be obtained by monitoring the size of revisions. The tables below record the size and pattern of revisions over the last five years. Please note that these indicators only report summary measures for revisions. The revised data itself may be subject to sampling or other sources of error. The ONS standard presentation is to show five years worth of revisions (i.e. 60 observations for a monthly series, 20 for a quarterly series). The first table covers Employment, Unemployment and Claimant Count data first published from September 2001 to August 2006. The second table covers Workforce Jobs data first published from January 2000 to July 2004. As more data are published a full five years worth of comparisons will be included for all series.

All data are not seasonally adjusted unless otherwise specified

Spreadsheets giving these estimates and the calculations behind the averages in the table are available on the National Statistics website at:

<http://www.statistics.gov.uk/StatBase/Product.asp?vlnk=5838>

Key Indicator	Value in latest period	Number of observations (maximum 60)	Revisions between first publication and estimates one year later	
			Average over the last five years (mean revision)	Average over the last five years without regard to sign (average absolute revision)
Employment rate (%)	76.1	60	-0.03	0.13
Unemployment rate (%)	5.1	60	0.02	0.05
Claimant count (000s)	58.2	60	0.01	0.25

Key Indicator	Value in latest period	Number of observations (maximum 20)	Revisions between first publication and estimates three years later	
			Average over the last five years (mean revision)	Average over the last five years without regard to sign (average absolute revision)
Workforce jobs (000s)	2,151	19	52.53*	52.53

A statistical test has been applied to the average revision to find out if the mean revision is significant. An asterisk (*) indicates where the mean revision has been found to be statistically significantly different from zero. One major reason for the significant revisions to the workforce jobs estimates is the introduction of the Annual Business Inquiry, which replaced the old Annual Employment Survey in May 2001. This change was widely publicised beforehand.

Labour Market statistics are revised in line with our Revisions Policy which is published on the National Statistics website (http://www.statistics.gov.uk/about/Methodology_by_theme/downloads/LM_revisionspolicy.pdf). More information about the revisions material in this release can also be found on the website (<http://www.statistics.gov.uk/cci/article.asp?ID=793>).

THIS MONTH'S RELEASE

There are no significant changes in this month's release.

NEXT MONTH'S RELEASE

There are no significant changes planned for next month's release.

SPECIAL

Population estimates in the LFS

On 24 August 2006 ONS published the 2005-based mid-year population estimates for the UK. On 7 September 2006 ONS published the 2006 Quarter 2 experimental quarterly population estimates for England and Wales. These population estimates have been incorporated into the LFS estimates (from July to September 2004 to date) from the October 2006 First Release.

The LFS estimates have been updated to include these new population estimates, using the interim reweighting adjustment methodology developed to take account of the 2001 Census results. Details of this methodology were published in the December 2002 edition of *Labour Market Trends*, which is available on the website at:

http://www.statistics.gov.uk/articles/labour_market_trends/Interim_lfs_estimates_Dec2002.pdf

ONS is currently planning the timetable to incorporate the 2006-based mid-year estimates for the UK and the 2007 Quarter 2 experimental population estimates for England and Wales into the main LFS aggregates from this autumn. Plans are also being drawn up to weight the LFS microdata to these latest population estimates. Currently the LFS microdata are consistent with the UK population estimates published in February and March 2003. They do not incorporate the more recent population estimates that are used in the headline LFS series published in the Labour market statistics First Releases.

Tables 12 to 15: Local labour market indicators

Tables 12 to 15 present a framework of labour market statistics for local areas. Data are presented as indicators of labour supply, labour demand and benefits. This structure adheres to the labour accounting system described in the Framework Review of Labour Market Statistics published on 5 August 2002

(see http://www.statistics.gov.uk/methods_quality/quality_review/downloads/LMSFR_Final.doc).

These tables include data from the Annual Population Survey. These data are weighted to population estimates consistent with those released in February 2003, not the latest revised population estimates. Interim reweighting of monthly LFS estimates at national and regional level has been applied in order to take account of the revised population data. For the annual local area LFS data such an interim reweighting is not possible. See Concepts and Definitions.

SAMPLING VARIABILITY AND TRENDS

All data are not seasonally adjusted unless otherwise specified

Some data in this release are based on statistical samples and, as such, are subject to sampling variability. If many samples were drawn, each would give a different result. The ranges shown for the LFS data in this release and in the following table represent '95 per cent confidence intervals'. It is expected that in 95 per cent of samples the range would contain the true value. For more information, see the *Guide to Labour Market Statistics Releases*.

May to July 2007

BACKGROUND NOTES

1. In addition to the data in this release, ONS can provide a wide range of detailed labour market data in a number of formats. In particular, data are available from Nomis[®], at <http://www.nomisweb.co.uk>, at the same time as this release is published. Further Labour Force Survey data are also published in the *Labour Force Survey Historical Quarterly Supplement* (<http://www.statistics.gov.uk/onlineproducts/default.asp#labour>). Further Labour Market statistics data appears in *Economic and Labour Market Review* (<http://www.statistics.gov.uk/StatBase/Product.asp?vlnk=14692>) and in the local area labour market statistical indicators web-based publication (<http://www.statistics.gov.uk/statbase/Product.asp?vlnk=14160>).
2. Further information on the topics covered in this release is available by contacting the Labour Market Statistics Helpline (tel: 020 7533 6094 or email labour.market@ons.gov.uk) or from the National Statistics website at: <http://www.statistics.gov.uk/onlineproducts/default.asp#labour>
The telephone number of the Labour Market Statistics Helpline will change to 01633 456901 with effect from 17 September 2007.
3. Details of the policy governing the release of new data are available from the press office. Also available is a list of the names of those given pre-publication access to the contents of this release.
4. **National Statistics** are produced to high professional standards set out in the National Statistics Code of Practice. They undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference. © Crown Copyright 2007.

CONCEPTS AND DEFINITIONS

Actual hours worked: See *hours worked*.

Annual Population Survey: Annual Population Survey (APS) data are included in Tables 12 to 15. The APS is a new survey which started in January 2004 and the first publication of APS data was on 28 July 2005. APS results will be published quarterly, but each publication will include data covering a 12-month period. The weighting of the APS is consistent with the weighting of the LFS micro-data, which were re-weighted to population estimates released in February 2003. However, during this reweighting exercise, revised population estimates were released, in September 2003. The quarterly, regional LFS data in this release have been interim reweighted to the latest population estimates, but for local area data such an interim reweighting is not possible. The APS data in Tables 12 to 15 are therefore not consistent with

All data are not seasonally adjusted unless otherwise specified

the quarterly LFS data published elsewhere in the release.

The APS database is similar to the annual LFS database in that it is compiled by taking data from four quarters of the LFS and combining them with additional samples of interviews. The first sample boost (included in the annual LFS) was introduced in 2000 for some areas of England, in 2001, for all areas in Wales and in 2003 for Scotland.

These increases in sample sizes have improved the accuracy of annual estimates for local areas. For further information see Volume 6 of the *LFS User Guide*, available from the National Statistics website at <http://www.statistics.gov.uk/statbase/product.asp?vlnk=1537>.

A wide range of annual local area data from the APS is available free from the Nomis[®] website at <http://www.nomisweb.co.uk>.

Claimant count: The number of people claiming Jobseeker's Allowance benefits.

Claimant count rate at national or regional level: The number of claimants resident in an area as a percentage of the sum of claimants and workforce jobs in the country or region. The number of workforce jobs is mainly collected through postal employer surveys and comprises employee jobs, self-employment jobs, HM armed forces and government-supported trainees and is used to calculate rates for regions and the countries of the UK. For smaller areas, proportions are used.

Claimant count proportion: The number of claimants resident in an area as a percentage of the working-age population resident in that area.

Economically active: People aged 16 and over who are either in *employment* or *unemployed*.

Economically inactive: People who are neither in *employment* nor *unemployed*. This includes those who want a job but have not been seeking work in the last four weeks, those who want a job and are seeking work but not available to start work, and those who do not want a job.

Employment and jobs: There are two ways of looking at employment: the number of people with jobs, or the number of jobs. The two concepts are not the same as a person can have more than one job.

The number of people with jobs is measured by the *Labour Force Survey* (LFS) and includes people aged 16 or over who did paid work (as an employee or self-employed), those who had a job that they were temporarily away from, those on government-supported training and employment programmes, and those doing unpaid family work.

All data are not seasonally adjusted unless otherwise specified

The number of jobs is measured by workforce jobs and is the sum of employee jobs (as measured by surveys of employers), self-employment jobs from the LFS, those in HM Forces, and government-supported trainees. Vacant jobs are not included.

The *Review of Employment and Jobs Statistics* highlighted differences between statistics on jobs produced from household and business surveys, and identified many of the reasons why these differences occur. Following that review, a comparison of estimates of jobs from the LFS and the WFJ series is available from the *Labour Market Statistics Overview* document at: <http://www.statistics.gov.uk/StatBase/Product.asp?vlnk=9539>

Full-time: In the *Labour Force Survey*, respondents are asked to self-classify their main job as either full-time or part-time. However, people on government supported employment and training programmes that are at college in the reference week are classified, by convention, as part-time. In employer surveys, jobs are generally classified as being part-time if the contracted hours of work are 30 hours or less per week.

Hours worked:

Actual hours worked: Actual hours worked statistics, shown at Table 7, measure how many hours were actually worked. These statistics are directly affected by changes in the number of people in employment and in the number of hours that individuals work. The figures also reflect public holidays, sickness and other absences from work during the reference period.

Usual hours worked: Usual hours worked statistics, shown at Table 8, measure how many hours people usually work per week. Compared with actual hours worked, they are less affected by public holidays, sickness and other absences from work. In this respect they provide a better measure of working patterns.

Inflows and Outflows: The claimant count records are analysed to provide information about inflows onto the count and outflows from the count on a monthly basis. To make comparisons over time consistent, these figures are standardised to a $4\frac{1}{3}$ week month before seasonal adjustment. These figures for people starting to or ceasing to claim Jobseeker's Allowance can be helpful towards interpreting changes in the claimant count.

Jobs density: The number of filled jobs per resident of working age.

Labour Force Survey: The main source for information on the labour market in the UK. It is a random household survey of approximately 53,000 households every three months conducted by the Office for National Statistics. As well as private households, the survey includes people living in student residence halls and National Health Service accommodation.

All data are not seasonally adjusted unless otherwise specified

Model-based estimates of unemployment: For estimates of unemployment for local areas, however, even the Annual Population Survey does not have a sufficiently large sample to provide precise estimates for all areas. For this reason a statistical model has been developed to improve the annual LFS/APS estimates of unemployment, for small areas, by using supplementary information, mainly the numbers of claimants of Jobseekers' Allowance (the claimant count). More information on the model-based estimates can be found at http://www.statistics.gov.uk/downloads/theme_labour/LALM_Brief_guide.pdf. A detailed user guide can be found at http://www.statistics.gov.uk/downloads/theme_labour/User_Guide.pdf

Rates: Generally the preferred measure of Labour Market statistics as they allow changes in the labour market to be interpreted in a wider context by allowing for changes in the overall population.

Sampling variability: Data based on statistical samples are subject to sampling variability. If many samples were drawn, each would give a different result. The ranges shown for the *Labour Force Survey* data in this release, for example, represent 95 per cent confidence intervals; in 95 per cent of samples the range would contain the true value.

Seasonal adjustment: A process of estimating regularly occurring seasonal effects and removing them from the raw data.

Unemployment: The number of unemployed people in the UK is measured through the *Labour Force Survey* following the internationally agreed definition recommended by the International Labour Organisation (ILO) – an agency of the United Nations. Unemployed people are:

- without a job, want a job, have actively sought work in the last four weeks and are available to start work in the next two weeks or;
- out of work, have found a job and are waiting to start it in the next two weeks.

Further Concepts and Definitions are available from the website at:

http://www.statistics.gov.uk/downloads/theme_labour/LMS_FR_HS_Concepts_Definitions.pdf

All data are not seasonally adjusted unless otherwise specified

Source: Labour Force Survey

1. Labour Force Survey is tabulated by region of residence.

Labour Market Statistics Helpline 020 7533 6094

2. Denominator = all persons of working age.

3. Denominator = Total economically active.

4. Quarter to quarter changes at regional level are particularly subject to sampling variability and should be interpreted in the context of changes over several quarters rather than in isolation.

The Labour Force Survey is a survey of the population in private households, student halls of residence and NHS accommodation. See Concepts and Definitions.

Workforce jobs enquiries 01633 812318

1. Civilian Workforce Jobs figures are a measure of jobs rather than people. For example, if a person holds two jobs, each job will be counted in the Civilian Workforce Jobs total. For this reason, Self-employment Jobs (which come from LFS) will not equal the figures for Self-employed persons from the LFS. Civilian Workforce Jobs figures come from a variety of sources, and where possible, from the employer rather than the individual. Employee Jobs (which is the largest component of Civilian Workforce Jobs) come from quarterly surveys of employers carried out by ONS, and administrative sources. See Concepts and Definitions.

Other data sources are as follows:

Self-employment Jobs are provided by LFS

Government-supported trainees are provided by administrative sources

Workforce jobs enquiries 01633 812318

1. Employee jobs figures are of a measure of jobs rather than people. For example, if a person holds two jobs, each job will be counted in the employee jobs total. Employee jobs figures come from quarterly surveys of employers carried out by ONS and administrative sources. See Concepts and Definitions

The quarterly employer surveys used to compile employee jobs figures do not collect data by Government Office Regions (GOR). Instead, Annual Business Inquiry (ABI) data are used to pro-rate the totals obtained from the quarterly surveys to generate GOR data. This technique can lead to the sum of the industry figures not matching the "All jobs" total in column 2.

1. Count of claimants of Jobseeker's Allowance.

2. Denominator = claimant count + workforce jobs.

Source: Jobcentre Plus administrative system
Labour Market Statistics Helpline 020 7533 6094

NB. These are different from the proportions of the working age populations claiming Jobseeker's Allowance for local areas shown in Tables 16 and 17. See Concepts and Definitions.

3. Flow figures are collected for 4 or 5 week periods between count dates; the figures are then converted to a standard 4¹/₃ week month.

The claimant count inflows, standardised to a 4¹/₃ week month but not seasonally adjusted, for August 2007 were 14,800 in total; 9,800 for men and 5,000 for women. The corresponding outflow figures were 14,300 in total; 10,000 for men and 4,300 for women

Months where there are 5 weeks between count dates. All the rest are 4 week periods.

Relationship between columns: 2= 3+4+5; 8= 9+10+11

Source: Jobcentre Plus administrative system

1. Count of claimants of Jobseeker's Allowance.

Labour Market Statistics Helpline 020 7533 6094

2. Only computerised claims are analysed by age and duration on a monthly basis. These figures therefore differ in total from those given in Table 7. The latter include clerically processed claims which currently amount to less than 1 per cent of the total claimant count.

Months where there are 5 weeks between count dates. All the rest are 4 week periods.

Source: Jobcentre Plus administrative system

1. Count of claimants of Jobseeker's Allowance.

Labour Market Statistics Helpline 020 7533 6094

2. Only computerised claims are analysed by age and duration on a monthly basis. These figures therefore differ in total from those given in Table 7. The latter include clerically processed claims which currently amount to less than 1 per cent of the total claimant count.

Months where there are 5 weeks between count dates. All the rest are 4 week periods.

Labour Market Statistics Helpline 020 7533 6094

1. Official estimate of the resident population.
2. Annual Population Survey (APS) data. The APS is a survey of the population of private households, student halls of residence and NHS accommodation. The APS data in this table are consistent with population estimates released in February 2003, not the latest revised population estimates - see note on page 7.
3. Model-based estimates of unemployment - see Concepts and Definitions.
4. Unemployment rates calculated as percentage of 16+ economically active population.
5. Count of claimants of Jobseeker's Allowance. Averaged over 12 month period.
6. Percentage of resident working age population of area. NB. These are different from the national and regional claimant rates shown in Tables 1a, 7 and the summary of other headline indicators. See Concepts and Definitions.
7. Labour demand in this table includes jobs only. Suitable comprehensive estimates of job vacancies are not available at local level.
8. Jobs data are mainly employees from the Annual Business Inquiry which refers to December of each year; they also include self-employed, HM Forces and government-supported trainees. Jobs densities are calculated as the number of jobs per resident of working age (16-59/64).

Sample size too small to provide estimates.

~ less than 500.

Labour Market Statistics Helpline 020 7533 6094

1. Official mid-year estimate of the resident population are not available for this geography. Denominators for claimant count and jobs density are based on 2001 Census data adjusted to be consistent with 2001 mid-year population estimates for local authorities.

2. Annual Population Survey (APS) data. The APS is a survey of the population of private households, student halls of residence and NHS accommodation. The APS data in this table are consistent with population estimates released in February 2003, not the latest revised population estimates - see note on page 7.

3. Unemployment rates calculated as percentage of 16+ economically active population

4. Count of claimants of Jobseeker's Allowance. Averaged over 12 month period.

5. Percentage of resident working age population of area. NB. These are different from the national and regional claimant rates shown in Tables 1a, 7 and the summary of other headline indicators. See Concepts and Definitions.

6. Labour demand in this table includes jobs only. Suitable comprehensive estimates of job vacancies are not available at local level.

7. Jobs data are mainly employees from the Annual Business Inquiry which refers to December of each year; they also include self-employed, HM Forces and government-supported trainees. Jobs densities are calculated as the number of jobs per resident of working age (16-59/64).

Sample size too small to provide estimates.

~ less than 500.

Relationship between columns = 3=1+2; 9=7+8

Source: Jobcentre Plus administrative system

1. Count of claimants of Jobseeker's Allowance.

Labour Market Statistics Helpline 020 7533 6094

2. Percentages of resident working age population of area. The population denominators are based on output area data from the 2001 Census. NB. These percentages are different from the national and regional claimant count rates shown in Tables 1a, 7 and the summary of other headline indicators. See Concepts and Definitions
