

Labour market statistics

August 2009

Date: 12 August 2009

Coverage: London Theme: Labour Market

Labour Force Survey data for London indicate that the trend in the employment rate is decreasing, and the rate in the latest period is significantly lower than a year ago. The trend in the unemployment rate is increasing, and the latest rate is significantly higher than a year ago. The trend in the unemployment rate is increasing, and the latest rate is significantly higher than a year ago. The seasonally adjusted claimant count was up in the year to July 2009.

Working age employment rate

Sampling variability $\pm 1.2\%$

Unemployment rate

Sampling variability $\pm 0.7\%$

Data in this table are seasonally adjusted unless otherwise stated

		Levels (thousands)	Rates (%)	Changes on year		Sampling variability of changes	
				Levels	Rates	Levels	Rates
Employment*	Apr-Jun 09	3,673	68.9	-88	-2.6	± 92	± 1.6
Unemployment**	Apr-Jun 09	359	8.9	80	2.0	± 40	± 1.0
Economically active*	Apr-Jun 09	4,033	75.8	-8	-1.1	± 88	± 1.4
Economically inactive***	Apr-Jun 09	1,234	24.2	66	1.1	± 88	± 1.5
Civilian workforce jobs (not seasonally adjusted)	Mar 2009	4,670		-53		..	
Claimant count	Jul 2009	218.8	4.5	85.9	1.8		

See note on page 8 on sampling variability.

* Levels are for those aged 16 and over, rates are for those of working age (16-59/64).

** Levels and rates are for those aged 16 and over. Rate is as a proportion of economically active.

*** Levels and rates are for those of working age.

.. Not available.

Employment and Jobs (tables 1 and 5)

The seasonally adjusted LFS estimate of employment in London was 68.9 per cent in the April to June 2009 period, down 2.6 percentage points on the same period a year earlier. The employment level was 3.67 million in the April to June 2009 period, down 88,000 on the same period a year earlier.

LFS estimates indicate a decrease in the level of male employment, down 60,000 on the same period a year earlier to 2.03 million. The male working age employment rate decreased 3.0 percentage points on a year earlier to 75.2 per cent.

LFS estimates indicate a decrease in the level of female employment, down 27,000 on the same period a year earlier to 1.64 million. The female working age employment rate decreased 2.2 percentage points on a year earlier to 62.1 per cent.

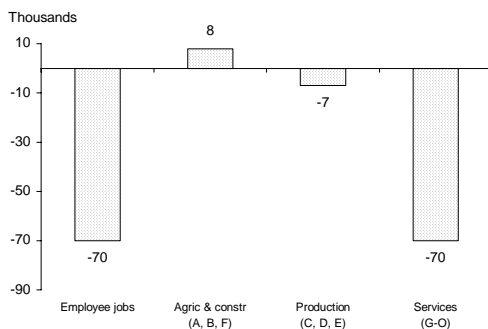

Seasonally adjusted employee jobs figures were down 13,000 in the quarter to March 2009.

Not seasonally adjusted employee jobs were down 70,000 in the year to March 2009. This was mainly due to decreases in the services and manufacturing sectors partly offset by a rises in the construction, agriculture education, health and public administration sectors.

Employee jobs by industry

Change on year from March 2008

SIC2003 groups shown in brackets

Unemployment (table 1)

The seasonally adjusted unemployment rate in London was 8.9 per cent in the April to June 2009 period, up 2.0 percentage points on the same period a year earlier. The rates for men and women in April to June 2009 were both 8.9 per cent.

Economically active (table 1)

The seasonally adjusted LFS estimate of economically active people in London was 4.03 million in the April to June 2009 period.

Economically inactive (table 1)

The seasonally adjusted working age economic inactivity rate in London in April to June 2009 was 24.2 per cent, up 1.1 percentage points from a year earlier.

The level of economically inactive people in the April to June 2009 period was 2.10 million, with 1.23 of these of working age, up 66,000 on the same period a year earlier.

Claimant count (tables 7 and 8)

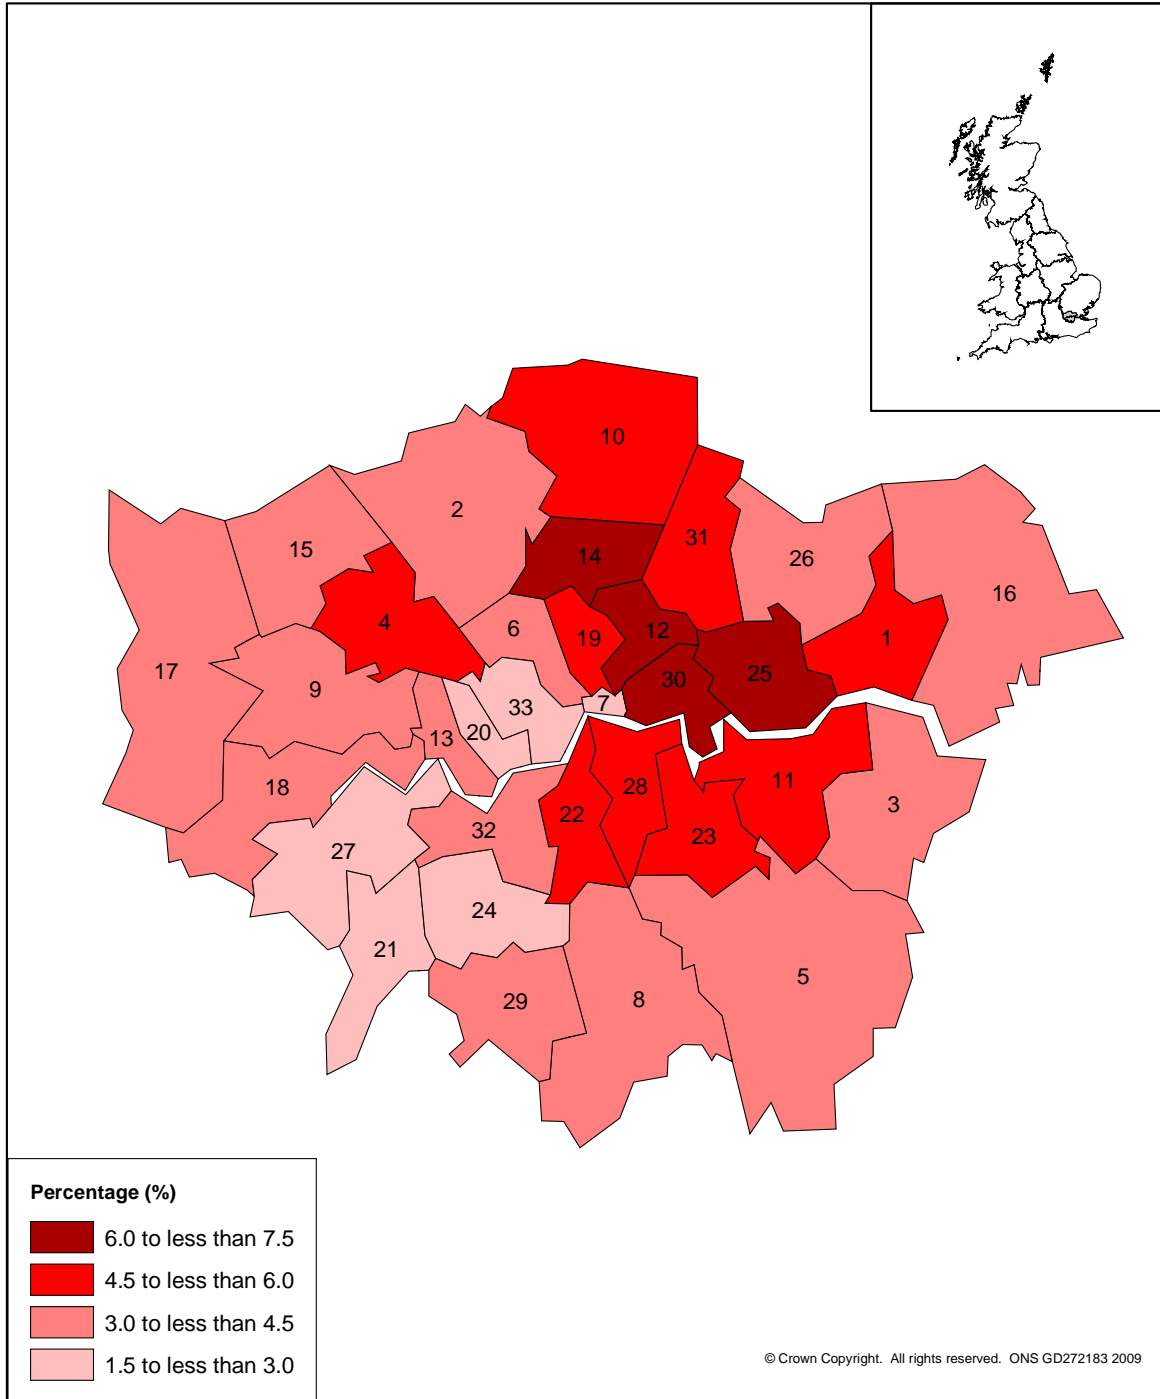

The seasonally adjusted claimant count rate in July 2009 was 4.5 per cent, up 0.1 percentage point from June 2009, and up 1.8 percentage points since July 2008. The seasonally adjusted number of claimants in July 2009 was 218,800, up 4,900 on June 2009, and up 85,900 since July 2008.

Local area data (table 16)

The claimant count as a proportion of the resident working age population for London was lowest in the City of London, at 1.9 per cent, and highest in Tower Hamlets, at 6.9 per cent.

Claimant count as a proportion of the resident working age population, by London Borough
July 2009 - London

1 Barking and Dagenham	5.7%	12 Hackney	6.7%	23 Lewisham	5.1%
2 Barnet	3.4%	13 Hammersmith and Fulham	4.4%	24 Merton	2.9%
3 Bexley	3.6%	14 Haringey	6.1%	25 Newham	6.1%
4 Brent	5.1%	15 Harrow	3.3%	26 Redbridge	4.4%
5 Bromley	3.3%	16 Havering	3.8%	27 Richmond upon Thames	2.3%
6 Camden	3.3%	17 Hillingdon	3.7%	28 Southwark	4.7%
7 City of London	1.9%	18 Hounslow	3.6%	29 Sutton	3.1%
8 Croydon	4.3%	19 Islington	5.4%	30 Tower Hamlets	6.9%
9 Ealing	4.4%	20 Kensington and Chelsea	2.7%	31 Waltham Forest	5.7%
10 Enfield	4.9%	21 Kingston upon Thames	2.4%	32 Wandsworth	3.1%
11 Greenwich	5.1%	22 Lambeth	5.4%	33 Westminster	2.8%

BASIC QUALITY INFORMATION

REVISIONS

There are no significant revisions to the data in this bulletin.

KEY QUALITY ISSUES

Detailed information about sampling variability and trends can be found in the following pages.

Summary Quality Report: A Summary Quality Report for this First Bulletin can now be found on the website at:

<http://www.statistics.gov.uk/cci/article.asp?ID=1354>

Common pitfalls in interpreting series: Expectations of accuracy and reliability in sample surveys are often too high. Revisions and sampling variability are inevitable consequences of the trade off between timeliness, accuracy and the burden on respondents. Details of sampling variability are included elsewhere in this bulletin.

Very few statistical revisions arise as a result of 'errors' in the popular sense of the word. All estimates, by definition, are subject to statistical 'error' but in this context the word refers to the uncertainty in any process or calculation that uses sampling, estimation or modelling. Most revisions reflect either the adoption of new statistical techniques or the incorporation of new information which allows the statistical error of previous estimates to be reduced. Only rarely are there avoidable 'errors' such as human or system failures, and such mistakes are made quite clear when they are discovered and corrected.

RELIABILITY

One indication of the reliability of the key indicators in this bulletin can be obtained by monitoring the size of revisions. The tables below record the size and pattern of revisions over the last five years. Please note that these indicators only report summary measures for revisions. The revised data itself may be subject to sampling or other sources of error. The ONS standard presentation is to show five years worth of revisions (i.e. 60 observations for a monthly series, 20 for a quarterly series). The first table covers Employment, Unemployment and Claimant Count data first published from April 2002 to March 2007. The second table covers Workforce Jobs data first published from January 2000 to December 2005.

Spreadsheets giving these estimates and the calculations behind the averages in the table are available on the National Statistics website at:

<http://www.statistics.gov.uk/StatBase/Product.asp?vlnk=5838>

Key Indicator	Value in latest period	Number of observations (maximum 60)	Revisions between first publication and estimates one year later	
			Average over the last five years (mean revision)	Average over the last five years without regard to sign (average absolute revision)
Employment rate (%)	68.9	60	-	0.12
Unemployment rate (%)	8.9	60	-	0.07
Claimant count (000s)	218.8	60	-0.06	0.40

Key Indicator	Value in latest period	Number of observations (maximum 20)	Revisions between first publication and estimates three years later	
			Average over the last five years (mean revision)	Average over the last five years without regard to sign (average absolute revision)
Workforce jobs (000s)	4,670	20	-11.10	36.20

A statistical test has been applied to the average revision to find out if the mean revision is significant. An asterisk (*) indicates where the mean revision has been found to be statistically significantly different from zero.

Labour Market statistics are revised in line with our Revisions Policy which is published on the National Statistics website

(http://www.statistics.gov.uk/about/Methodology_by_theme/downloads/LM_revisionspolicy.pdf).

More information about the revisions material in this bulletin can also be found on the website (<http://www.statistics.gov.uk/cci/article.asp?ID=793>).

THIS MONTH'S BULLETIN

Local labour market indicators

Tables 12 to 15, the local labour market indicators tables, have been updated in this month's bulletin with employment, unemployment and economic inactivity data from the January 2008 to December 2008 Annual Population Survey; model-based estimates of unemployment for local authorities; claimant count levels and proportions for January 2008 to December 2008.

NEXT MONTH'S RELEASE OF TABLES

The tables that accompany the current Regional Statistical Bulletin will be available from the National Statistics website at:

<http://www.statistics.gov.uk/StatBase/Product.asp?vlnk=15084>.

NEXT QUARTER'S STATISTICAL BULLETIN

Local labour market indicators

Tables 12 to 15, the local labour market indicators tables, will be updated in next quarter's Statistical Bulletin with employment, unemployment and economic inactivity data from the April 2008 to March 2009 Annual Population Survey; model-based estimates of unemployment for local authorities; claimant count levels and proportions for April 2008 to March 2009 along with the latest mid-year population estimates.

SPECIAL

Workforce Jobs estimates

Workforce jobs estimates, shown at Table 5 of this Statistical Bulletin are mainly sourced from employer surveys. However estimates for Construction and for Agriculture, forestry and fishing are sourced from the Labour Force Survey (LFS). Estimates for self-employment jobs, for all sectors, are also sourced from the LFS. The estimates for employee jobs in the Construction and Agriculture, forestry and fishing sectors, and to a lesser degree for the whole economy, from March 2009 may not be entirely consistent with those for previous quarters. There may be similar inconsistencies for self-employment jobs for all sectors, but not for whole economy self-employment jobs as any sectoral inconsistencies would cancel each other out. This is because, from 2009, the sectoral breakdown of LFS data which feeds into Workforce jobs estimates has been collected according to the Standard Industrial Classification (SIC) 2007 and then mapped to SIC 2003 according to the assumed relationship between the two classifications. ONS currently plans to convert the Workforce Jobs estimates to SIC 2007 in the June 2010 edition of this Statistical Bulletin.

Population estimates in the APS

Estimates from the Annual Population Survey are consistent with those published on 22 August 2007 and not the latest population estimates used by the LFS. All estimates using the APS data in this bulletin will be inconsistent with the LFS estimates published in Table 1.

Tables 12 to 15: Local labour market indicators

Tables 12 to 15 present a framework of labour market statistics for local areas. Data are presented as indicators of labour supply, labour demand and benefits. This structure adheres to the labour accounting system described in the Framework Review of Labour Market Statistics published on 5 August 2002

(see http://www.statistics.gov.uk/methods_quality/quality_review/downloads/LMSFR_Final.doc).

SAMPLING VARIABILITY AND TRENDS

Some data in this bulletin are based on statistical samples and, as such, are subject to sampling variability. If many samples were drawn, each would give a different result. The ranges shown for the LFS data in this bulletin and in the following table represent '95 per cent confidence intervals'. It is expected that in 95 per cent of samples the range would contain the true value. For more information, see the *Guide to Labour Market Statistics Bulletins*.

April to June 2009

BACKGROUND NOTES

1. In addition to the data in this bulletin, ONS can provide a wide range of detailed labour market data in a number of formats. In particular, data are available from Nomis[®], at <http://www.nomisweb.co.uk>, at the same time as this bulletin is published. Further Labour Force Survey data are also published in the *Labour Force Survey Historical Quarterly Supplement* (<http://www.statistics.gov.uk/onlineproducts/default.asp#labour>). Further Labour Market statistics data appears in *Economic and Labour Market Review* (<http://www.statistics.gov.uk/elmr>) and in the local area labour market statistical indicators web-based publication (<http://www.statistics.gov.uk/statbase/Product.asp?vlnk=14160>).
2. Further information on the topics covered in this bulletin is available by contacting the Labour Market Statistics Helpline (tel: 01633 456901 or email labour.market@ons.gov.uk) or from the National Statistics website at: <http://www.statistics.gov.uk/onlineproducts/default.asp#labour>
3. Details of the policy governing the release of new data are available from the press office. Also available is a list of the names of those given pre-publication access to the contents of this bulletin.
4. **National Statistics** are produced to high professional standards set out in the UK Statistics Authority's Code of Practice. They undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference. © Crown Copyright 2009.

CONCEPTS AND DEFINITIONS

Actual hours worked: *See hours worked.*

Annual Population Survey: Annual Population Survey (APS) data are included in Tables 2, 3, 6, 9, 10, 11, 12, 13, 14 and 15. APS results will be published quarterly, but each publication will include data covering a 12-month period. The weighting of the APS is consistent with the weighting of the LFS micro-data. The quarterly, regional LFS data in this bulletin have been interim reweighted to the latest population estimates, but for local area data such an interim reweighting is not possible. The APS data in Tables 2, 3, 6, 9, 10, 11, 12, 13, 14, and 15 are therefore not consistent with the quarterly LFS data published elsewhere in the bulletin.

The APS database is compiled by taking data from four quarters of the LFS and combining them with additional samples of interviews. The first sample boost (included in the annual LFS) was introduced in 2000 for some areas of England, in 2001, for all areas in Wales and in 2003 for Scotland.

These increases in sample sizes have improved the accuracy of annual estimates for local areas. For further information see Volume 6 of the LFS User Guide, available from the National Statistics website at <http://www.statistics.gov.uk/statbase/product.asp?vlnk=1537>.

A wide range of annual local area data from the APS is available free from the Nomis[®] website at <http://www.nomisweb.co.uk>.

Claimant count: The number of people claiming unemployment-related benefits - since October 1996 this has been the number of people claiming Jobseeker's Allowance. The seasonally adjusted claimant count series, which goes back to 1971 for the United Kingdom, is estimated on a basis consistent with the current benefits regime, i.e. it has been adjusted for discontinuities in coverage. The non-seasonally adjusted series includes all claimants aged 16 and over while the seasonally adjusted series includes all claimants aged 18 and over. This difference in coverage exists because restricting the seasonally adjusted series to those aged 18 and over was the only realistic way of maintaining the consistent series back to 1971, following a rule change in 1988 which resulted in most 16-17 year olds becoming ineligible to claim unemployment-related benefits.

From 24 November 2008, the eligibility for claiming lone parent income support changed. Lone parents who were previously eligible until their youngest child reached 16 have, since 24 November 2008, become ineligible once their youngest child reached 12. Further changes in the eligibility age to 10 and 7 years will occur in October 2009 and October 2010 respectively. Although this is not a change in the eligibility for Jobseeker's Allowance, it is likely to have an impact on the level of the claimant count as lone parents who were not previously looking for work start to do so. DWP have created a series looking at the number of lone parents in the claimant count, spanning the period from before the rule change. This series is available in Table 10(1) of the national Labour Market Statistical Bulletin and on the DWP website: <http://research.dwp.gov.uk/asd/>

Claimant count rate at national or regional level: The number of claimants resident in an area as a percentage of the sum of claimants and workforce jobs in the area.

Claimant count rate at national or regional level: The number of claimants resident in an area as a percentage of the sum of claimants and workforce jobs in the country or region. The number of workforce jobs is mainly collected through postal employer surveys and comprises employee jobs, self-employment jobs, HM armed forces and government-supported trainees and is used to

calculate rates for regions and the countries of the UK. For smaller areas, proportions are used.

Claimant count proportion: The number of claimants resident in an area as a percentage of the working-age population resident in that area.

Economically active: People aged 16 and over who are either in *employment* or *unemployed*.

Economically inactive: People who are neither in *employment* nor *unemployed*. This includes those who want a job but have not been seeking work in the last four weeks, those who want a job and are seeking work but not available to start work, and those who do not want a job.

Employment and jobs: There are two ways of looking at employment: the number of people with jobs, or the number of jobs. The two concepts are not the same as a person can have more than one job.

The number of people with jobs is measured by the *Labour Force Survey* (LFS) and includes people aged 16 or over who did paid work (as an employee or self-employed), those who had a job that they were temporarily away from, those on government-supported training and employment programmes, and those doing unpaid family work.

The number of jobs is measured by workforce jobs and is the sum of employee jobs (as measured by surveys of employers), self-employment jobs from the LFS, those in HM Forces, and government-supported trainees. Vacant jobs are not included.

The *Review of Employment and Jobs Statistics* highlighted differences between statistics on jobs produced from household and business surveys, and identified many of the reasons why these differences occur. Following that review, a comparison of estimates of jobs from the LFS and the WFJ series is available

from the *Labour Market Statistics Overview* document at:

<http://www.statistics.gov.uk/StatBase/Product.asp?vlnk=1944>

Full-time: In the *Labour Force Survey*, respondents are asked to self-classify their main job as either full-time or part-time. However, people on government supported employment and training programmes that are at college in the reference week are classified, by convention, as part-time. In employer surveys, jobs are generally classified as being part-time if the contracted hours of work are 30 hours or less per week.

Hours worked:

Actual hours worked: Actual hours worked statistics, shown at Table 6, measure how many hours were actually worked. These statistics are directly affected by changes in the number of people in employment and in the number of hours that individuals work. The figures also reflect public holidays, sickness and other absences from work during the reference period.

Usual hours worked: Usual hours worked statistics, shown at Table 6(1), measure how many hours people usually work per week. Compared with actual hours worked, they are less affected by public holidays, sickness and other absences from work. In this respect they provide a better measure of working patterns.

Inflows and Outflows: The claimant count records are analysed to provide information about inflows onto the count and outflows from the count on a monthly basis. To make comparisons over time consistent, these figures are standardised to a $4\frac{1}{3}$ week month before seasonal adjustment. These figures for people starting to or ceasing to claim Jobseeker's Allowance can be helpful towards interpreting changes in the claimant count.

Jobs density: The number of filled jobs per resident of working age.

Labour Force Survey: The main source for information on the labour market in the UK. It is a random household survey of approximately 53,000 households every three months conducted by the Office for National Statistics. As well as private households, the survey includes people living in student residence halls and National Health Service accommodation.

Model-based estimates of unemployment: For estimates of unemployment for local areas the Annual Population Survey does not have a sufficiently large sample to provide precise estimates for all areas. For this reason a statistical model has been developed to improve the annual LFS/APS estimates of unemployment, for small areas, by using supplementary information, mainly the numbers of claimants of Jobseekers' Allowance (the claimant count). More information on the model-based estimates can be found at <http://www.statistics.gov.uk/STATBASE/Product.asp?vlnk=13574>

Rates: Generally the preferred measure of Labour Market statistics as they allow changes in the labour market to be interpreted in a wider context by allowing for changes in the overall population.

Sampling variability: Data based on statistical samples are subject to sampling variability. If many samples were drawn, each would give a different result. The ranges shown for the *Labour Force Survey* data in this bulletin, for example, represent 95 per cent confidence intervals; in 95 per cent of samples the range would contain the true value.

Seasonal adjustment: A process of estimating regularly occurring seasonal effects and removing them from the raw data.

Unemployment: The number of unemployed people in the UK is measured through the *Labour Force Survey* following the internationally agreed definition recommended by the International Labour Organisation (ILO) – an agency of the United Nations. Unemployed people are:

- without a job, want a job, have actively sought work in the last four weeks and are available to start work in the next two weeks or;
- out of work, have found a job and are waiting to start it in the next two weeks.

Source: Labour Force Survey

1. Labour Force Survey is tabulated by region of residence.

Labour Market Statistics Helpline 01633 456901

2. Denominator = all persons of working age.

3. Denominator = Total economically active.

4. Quarter on quarter changes at regional level are particularly subject to sampling variability and should be interpreted in the context of changes over several quarters rather than in isolation.

The Labour Force Survey is a survey of the population in private households, student halls of residence and NHS accommodation. See Concepts and Definitions.

Further regional and local area Labour Market statistics are available. See Background Note 1 for details.

Workforce jobs enquiries 01633 456776

1. Civilian Workforce Jobs figures are a measure of jobs rather than people. For example, if a person holds two jobs, each job will be counted in the Civilian Workforce Jobs total. For this reason, Self-employment Jobs (which come from LFS) will not equal the figures for Self-employed persons from the LFS. Civilian Workforce Jobs figures come from a variety of sources, and where possible, from the employer rather than the individual. Employee Jobs (which is the largest component of Civilian Workforce Jobs) come from quarterly surveys of employers carried out by ONS, and administrative sources. See Concepts and Definitions.

Other data sources are as follows:

Self-employment Jobs are provided by LFS

Government-supported trainees are provided by administrative sources

2. There is a discontinuity in the employee jobs series between December 2005 and September 2006 due to improvements to the annual benchmark. Further information can be found at <http://www.statistics.gov.uk/Statbase/Product.asp?vlnk=9765>

Workforce jobs enquiries 01633 456776

1. Employee jobs figures are of a measure of jobs rather than people. For example, if a person holds two jobs, each job will be counted in the employee jobs total. Employees jobs figures come from quarterly surveys of employers carried out by ONS and administrative sources. See Concepts and Definitions.

There is a discontinuity in the employee jobs series. See Table 4, footnote 2 for further details.

The quarterly employer surveys used to compile employee jobs figures do not collect data by Government Office Regions (GOR). Instead, Annual Business Inquiry (ABI) data are used to pro-rate the totals obtained from the quarterly surveys to generate GOR data. This technique can lead to the sum of the industry figures not matching the "All jobs" total in column 2.

1. Count of claimants of Jobseeker's Allowance.

2. Denominator = claimant count + workforce jobs.

NB. These are different from the proportions of the working age populations claiming Jobseeker's Allowance for local areas shown in Tables 16 and 17. See Concepts and Definitions.

3. Flow figures are collected for 4 or 5 week periods between count dates; the figures are then converted to a standard 4¹/₃ week month. Non-seasonally adjusted claimant flows for earlier months are available from Nomis® at: <http://www.nomisweb.co.uk>

Source: Jobcentre Plus administrative system
Labour Market Statistics Helpline 01633 456901

Months where there are 5 weeks between count dates. All the rest are 4 week periods.

Relationship between columns: 2= 3+4+5; 8= 9+10+11

Source: Jobcentre Plus administrative system

1. Count of claimants of Jobseeker's Allowance.

Labour Market Statistics Helpline 01633 456901

2. Only computerised claims are analysed by age and duration on a monthly basis. These figures therefore differ in total from those given in Table 7. The latter include clerically processed claims which currently amount to less than 1 per cent of the total claimant count.

Months where there are 5 weeks between count dates. All the rest are 4 week periods.

Source: Jobcentre Plus administrative system

1. Count of claimants of Jobseeker's Allowance.

Labour Market Statistics Helpline 01633 456901

2. Only computerised claims are analysed by age and duration on a monthly basis. These figures therefore differ in total from those given in Table 7. The latter include clerically processed claims which currently amount to less than 1 per cent of the total claimant count.

Months where there are 5 weeks between count dates. All the rest are 4 week periods.

Labour Market Statistics Helpline 01633 456901

1. Official estimate of the resident population.

2. Annual Population Survey (APS) data. The APS is a survey of the population of private households, student halls of residence and NHS accommodation.

3. Model-based estimates of unemployment - see Concepts and Definitions.

4. Unemployment rates calculated as percentage of 16+ economically active population.

5. Count of claimants of Jobseeker's Allowance. Averaged over 12 month period.

6. Percentage of resident working age population of area. NB. These are different from the national and regional claimant rates shown in Tables 1a, 7 and the summary of other headline indicators. See Concepts and Definitions.

7. Labour demand in this table includes jobs only. Suitable comprehensive estimates of job vacancies are not available at local level.

8. Jobs data are mainly employees from the Annual Business Inquiry which refers to December of each year; they also include self-employed, HM Forces and government-supported trainees. Jobs densities are calculated as the number of jobs per resident of working age (16-59/64).

Sample size too small to provide estimates.

~ less than 500.

1. Official estimate of the resident population. Population estimates for Parliamentary Constituencies are mid-2006 population estimates
 2. Annual Population Survey (APS) data. The APS is a survey of the population of private households, student halls of residence and NHS accommodation.
 3. Unemployment rates calculated as percentage of 16+ economically active population.
 4. Count of claimants of Jobseeker's Allowance. Averaged over 12 month period.
 5. Percentage of resident working age population of area. NB. These are different from the national and regional claimant rates shown in Tables 1a, 7 and the summary of other headline indicators. See Concepts and Definitions.
 6. Labour demand in this table includes jobs only. Suitable comprehensive estimates of job vacancies are not available at local level.
 7. Jobs data are mainly employees from the Annual Business Inquiry which refers to December of each year; they also include self-employed, HM Forces and government-supported trainees. Jobs densities are calculated as the number of jobs per resident of working age (16-59/64).

Relationship between columns = 3=1+2; 9=7+8

Source: Jobcentre Plus administrative system

1. Count of claimants of Jobseeker's Allowance.

Labour Market Statistics Helpline 01633 456901

2. Percentages of resident working age population of area. The population denominators for Parliamentary Constituencies are based on 2006 mid year estimates. NB. These percentages are different from the national and regional claimant count rates shown in Tables 1a, 7 and the summary of other headline indicators. See concepts and Definitions.
