Labour market statistics

June 2004: North West

All data are not seasonally adjusted unless otherwise specified

Labour Force Survey data for the North West indicate that the trend in the employment rate may now be falling slightly, but the rate in the latest period is not significantly different from a year ago. The trend in the unemployment rate is falling, but the latest rate is not significantly different from a year ago.

Data for the three months to April 2004 show the seasonally adjusted employment rate at 73.3 per cent, unchanged on a year earlier. The seasonally adjusted unemployment rate was 4.5 per cent, down 0.4 percentage points on a year earlier.

The seasonally adjusted claimant count was down in the year to May 2004.

Data in this table are seasonally adjusted unless otherwise stated

		Level (thousands)	Rate (%)	Change on year (level)	Sampling variability (thousands)	Change on year (rate)	Sampling variability (%)
Employment*	Feb-Apr	3,099	73.3	13	± 78	0.0	± 1.5
Unemployment**	Feb-Apr	147	4.5	-15	± 24	-0.4	± 0.7
Economically active*	Feb-Apr	3,245	76.8	-2	± 77	-0.3	± 1.4
Economically inactive+ <i>of which:</i>	Feb-Apr	951	23.2	15	± 76	0.3	± 1.4
Not wanting a job+	Feb-Apr	745		44	± 69		
Wanting a job+	Feb-Apr	206		-30	± 41		
Civilian workforce jobs (not seasonally adjusted)	Dec 2003	3,351		18	..		
Claimant count	May 2004	100.0	2.9 ⁺⁺	-13.9		-0.4	

See note on page 8 on sampling variability.

* Levels are for those aged 16 and over, rates are for those of working age (16-59/64).

** Levels and rates are for those aged 16 and over. Rate is as a proportion of economically active.

+ Levels and rates are for those of working age.

++ Denominator = claimant count + workforce jobs. For regional claimant count proportions, using resident working age populations see Tables 17 and 18. See background note 5.

.. Not available.

From May 2001: vacancy series deferred (see note on page 7).

New this month:

February to April 2004 data: latest three-month average LFS results;

May 2004 data: claimant count.

All data are not seasonally adjusted unless otherwise specified

Employment (tables 1 to 6)

The seasonally adjusted LFS estimate of employment in the North West was 73.3 per cent in the February to April 2004 period, unchanged on the same period a year earlier. The employment level was 3.10 million in the February to April 2004 period, up 13,000 on the same period a year earlier.

Seasonally adjusted employee jobs figures were up 13,000 in the quarter to December 2003.

Not seasonally adjusted employee jobs were up 14,000 in the year to December 2003. This was mainly due to rises in the services and 'other' industries, partly offset by falls in manufacturing and construction industries.

Unemployment (table 1)

The seasonally adjusted unemployment rate in the North West was 4.5 per cent in the February to April 2004 period, down 0.4 percentage points on the same period a year earlier. The rates for men and women in February to April 2004 were 4.9 per cent and 4.1 per cent respectively.

All data are not seasonally adjusted unless otherwise specified

Claimant count (tables 7 and 8)

The seasonally adjusted claimant count rate in May 2004 was 2.9 per cent, unchanged from April 2004, and down 0.4 percentage points since May 2003. The seasonally adjusted number of claimants in May 2004 was 100,000, down 1,300 on April 2004, and down 13,900 since May 2003. The not seasonally adjusted number of claimants was 101,600 in May 2004.

The not seasonally adjusted number of computerised claims of people aged 18 to 24 was 30,500 in May 2004, down 3,400 over the year. The number of computerised claims has fallen over the year for all age and duration groups.

Economically active (tables 1 and 9)

The seasonally adjusted LFS estimate of economically active people in the North West was 3.25 million in the February to April 2004 period.

Economically inactive (tables 1, 10 and 11)

The seasonally adjusted LFS estimate of economically inactive people in the North West in the February to April 2004 period was 2.07 million, with 951,000 of these of working age. Over the year the number of economically inactive people of working age was up 15,000.

Vacancies (table 12)

Publication of the seasonally adjusted Jobcentre vacancy series has been deferred. Figures from May 2001 are affected by the introduction of Employer Direct – see note on page 7.

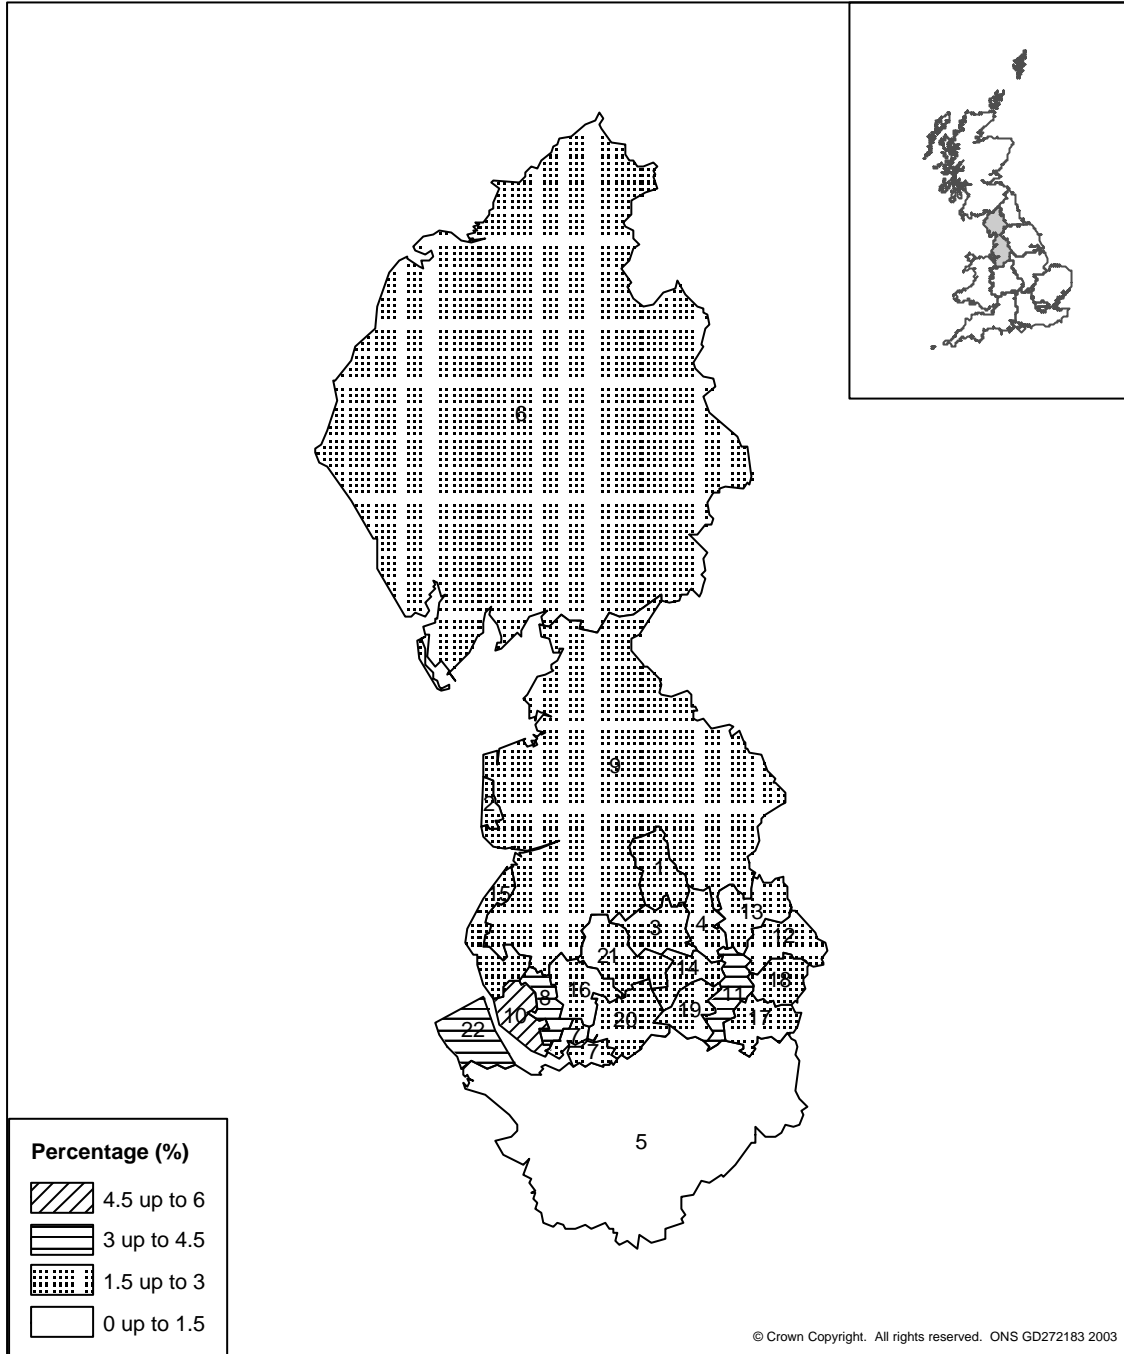

Local area data (table 17)

The claimant count as a proportion of the resident working age population was lowest in Ribble Valley, at 0.5 per cent. It was highest in Liverpool, at 5.1 per cent.

All data are not seasonally adjusted unless otherwise specified

Claimant count as a proportion of the resident working age population, by County/UA

May 2004 - North West

1 Blackburn with Darwen UA	2.7%	12 Oldham	2.5%
2 Blackpool UA	2.7%	13 Rochdale	2.5%
3 Bolton	2.2%	14 Salford	2.6%
4 Bury	1.7%	15 Sefton	2.8%
5 Cheshire	1.3%	16 St. Helens	2.8%
6 Cumbria	1.9%	17 Stockport	1.5%

11 Manchester	4.1%	22 Wirral	3.2%

All data are not seasonally adjusted unless otherwise specified

REVISIONS

General

One indication of the reliability of the key indicators in this release can be obtained by monitoring the size of revisions. The tables below record the size and pattern of revisions which have occurred over the last five years. Please note that these indicators only report summary measures for revisions. The revised data may itself be subject to sampling or other sources of error. The ONS standard presentation is to show five years worth of revisions (ie 60 observations for a monthly series, 20 for a quarterly series). The first table covers Employment and Unemployment data first published from January 1999 to March 2003 and Claimant Count data first published from April 1998 to March 2003. The second table covers data first published from January 2000 to January 2001. As more data are published a full five years worth of comparisons will be included for all series. A spreadsheet giving these estimates and the calculations behind the averages in the table is available on the National Statistics website at

[<http://www.statistics.gov.uk/StatBase/Product.asp?vlnk=1944>].

Key Indicator	Value in latest period	Number of observations (maximum 60)	Revisions between first publication and estimates one year later	
			Average over the last five years (bias)	Average over the last five years without regard to sign (average absolute revision)
Employment rate (%)	73.3	53	-0.24	0.37
Unemployment rate (%)	4.5	53	0.09	0.17
Claimant count (000s)	100.0	44	0.13	0.43

Key Indicator	Value in latest period	Number of observations (maximum 20)	Revisions between first publication and estimates three years later	
			Average over the last five years (bias)	Average over the last five years without regard to sign (average absolute revision)
Workforce jobs (000s)#	3,351	#	#	#

* A statistical test has been applied to the average revision to find out if there is bias in the revisions. An asterisk (*) indicates where statistically significant bias has been found.

There are insufficient data to calculate the revisions analysis.

Labour Market statistics are revised in line with our Revisions Policy which is published on the National Statistics website [http://www.statistics.gov.uk/about/Methodology_by_theme/downloads/LM_revisionspolicy.pdf]. More information about the revisions material in this release can also be found on the website - [<http://www.statistics.gov.uk/cci/article.asp?ID=793>].

All data are not seasonally adjusted unless otherwise specified

THIS MONTH

Claimant count rates and proportions

The workplace-based denominators used to calculate the regional and national claimant count rates have been updated, with rates for January 2003 to May 2004 now being based on mid-2003 denominators, and revised back to 1996. These workplace-based denominators (which are no longer used to calculate rates for sub-regional areas) relate to the sum of claimants and workforce jobs for the corresponding mid-year (or the latest available mid-year estimates, currently for June 2003).

The residence-based denominators used for calculating the claimant count figures as proportions of the resident working age population for local authorities and NUTS 3 areas have also been updated using the mid-2002 population estimates published by ONS. Proportions for parliamentary constituencies and travel-to-work areas continue to use mid-2001 denominators, although these have now been revised for areas around Manchester to take account of the recent revisions to population estimates.

SPECIAL

Impact of population revisions on LFS series

Revised national and regional mid-year population estimates for 2001 and 2002 were published by ONS on 26 September 2003, and revised estimates for 1992 to 2000 were published on 23 October 2003.

Then, on 4 November 2003, ONS published new provisional population estimates for Manchester for the years 2001 and 2002. Revised estimates for the North West Region and for England as a whole were also published taking the Manchester revision into account. No revised population estimates for 1992 to 2000 were published at that time. The revised series for 1992 to 2000 will be published later in 2004.

In order to maintain consistency in LFS time series, only population data for which consistent back series are available can be taken into account in the LFS estimation process. Therefore, while the population data released in September and October 2003 are used in the LFS interim estimates, the population data revised to allow for the new Manchester figures cannot be taken into account yet. However, when revised population figures for 1992 to 2000 are published, interim revised LFS series for these years will be published as soon as possible after this.

Allowing for the Manchester revision, the 2003 and 2004 estimates used for LFS interim estimation since November 2003 are very close to the new 2002-based projections for these years

All data are not seasonally adjusted unless otherwise specified

published by the Government Actuary's Department (GAD) on 18 December 2003.

Future LFS revisions

Future revised population estimates, when accompanied by consistent historical series, will be incorporated as swiftly as possible into revised LFS series using the interim LFS adjustment procedure.

By 2005, it is planned that modernised LFS processing systems will be ready which will enable the new MYE for 2004 to be incorporated into revised LFS microdata much more swiftly than is now possible. The revised LFS time series, taking account of the 2004 MYE, to be released in September 2005 should therefore be produced entirely consistently with the LFS microdata, without the need for any interim adjustment procedure.

Tables 13 to 16: Local labour market indicators

Tables 13 to 16 present a framework of labour market statistics for local areas. Data are presented as indicators of labour supply, labour demand and benefits. This structure adheres to the labour accounting system described in the Framework Review of Labour Market Statistics published on 5 August 2002 (see http://www.statistics.gov.uk/methods_quality/quality_review/downloads/LMSFR_Final.doc).

These tables include data from the annual local area Labour Force Survey. These data are weighted to population estimates which were released in February 2003, not the latest revised population estimates. Interim reweighting of monthly LFS estimates at national and regional level has been applied in order to take account of the revised population data. For the annual local area LFS data such an interim reweighting is not possible. (see background note 2).

Jobcentre vacancy data

Publication of the Jobcentre vacancy series has been deferred due to distortions to the data as a result of the introduction of Employer Direct by Jobcentre Plus.

A limited range of statistics on Jobcentre Plus vacancies, relating to the inflows of newly-notified vacancies, is now being made available on Nomis[®], though not at this stage as National Statistics. (For further details see the news and research item on page 455 of the September 2002 issue of *Labour Market Trends*.)

The introduction of Employer Direct, a major change which involved transferring the vacancy-taking process from local Jobcentres to regional Customer Service Centres, has substantially affected the vacancy data since May 2001.

All data are not seasonally adjusted unless otherwise specified

In addition, the numbers of notified vacancies appear to be substantially affected by a drive (from April 2003) by Jobcentre Plus to market their services and increase notifications from many employers in chosen sectors. Recent changes in these figures would therefore not necessarily signify developments in the labour market.

ONS and the Department for Work and Pensions are continuing to monitor and review the data with a view to restoring series when it is appropriate to do so.

Sampling variability and trends

More information on the statistics in this release can be found in the Guide to Labour Market Statistics Releases, available from the labour market helpline 020 7533 6094. Information is also available on the National Statistics website at <http://www.statistics.gov.uk/onlineproducts/default.asp>.

Some data in this release are based on statistical samples and, as such, are subject to sampling variability. If many samples were drawn, each would give a different result. The ranges shown for the LFS data in this release and in the following table represent '95 per cent confidence intervals'. It is expected that in 95 per cent of samples the range would contain the true value. For more information, see the Guide to Labour Market Statistics Releases.

February to April 2004

Thousands

BACKGROUND NOTES

1. The LFS sample population covers those living in private households, student halls of residence and NHS accommodation.
2. Annual local area data from the LFS are included in Tables 13 to 16. All LFS micro-data have been reweighted to be consistent with post census population estimates, which were published in February 2003. However, during this reweighting exercise, revised population estimates were released, in September 2003. The quarterly, regional LFS data in this release have been interim reweighted to the latest (September 2003) population estimates, but for local area data such an interim reweighting is not possible. The LFS data in Tables 13 to 16 are therefore not consistent with the quarterly LFS data published elsewhere in the release. The next reweighting of LFS micro-data will be in 2005, after which all LFS outputs will be consistent with the latest population estimates (see note on future LFS revisions on page 7).

The annual LFS database is compiled by taking data from waves one and five of four quarters of the LFS and combining them with an additional sample of interviews. This sample boost was introduced in 2000 and has improved the accuracy of the annual estimates for some local areas in England and all local areas in Wales (a boost was also introduced in Scotland for the 2003/04 survey, and the results of this survey will be published in autumn 2004). There are now different publication thresholds for annual LFS data, depending on the

All data are not seasonally adjusted unless otherwise specified

size of the sample boost in the area. The thresholds are six thousand, four thousand, two thousand and as low as one thousand for some areas in Wales. For further information see Volume 6 of the *LFS User Guide*. This guide, along with additional data and further background information, are available on the National Statistics website at <http://www.statistics.gov.uk/lfs>. A wide range of annual local area data from the LFS is available free from the Nomis[®] website at <http://www.nomisweb.co.uk>.

3. Not seasonally adjusted claimant count and vacancies data are gathered from administrative sources and constitute a complete count. However, seasonally adjusted totals are presented as rounded to the nearest hundred to avoid spurious precision. Any differences between the sum of the rounded seasonally adjusted figures and the UK totals are due to this rounding.
4. Claimant count flows are the number of people joining or leaving the count in the period between the count dates. They are therefore affected by the number of weeks between count dates. To enable comparisons from month to month, the flows figures are standardised to a 4.33-week month before seasonal adjustment.
5. The number of Jobseeker's Allowance (JSA) claimants can be expressed as a proportion of either (a) the corresponding mid-year estimate (or the latest available mid-year estimate) of the workforce jobs in the area plus the number of claimants, or (b) the resident working age population. The number of workforce jobs is mainly collected through postal employer surveys and comprises employee jobs, self-employment jobs, HM armed forces and government-supported trainees and is used to calculate rates for regions and the countries of the UK. For smaller areas, proportions based on the resident working age populations are used.
6. The count of JSA claimants is mostly derived from the Jobcentre Plus computer records. However for various reasons, e.g. when a claimant's National Insurance number is not known, a few claims have to be dealt with manually by local offices. These claims, which amount to less than 1 per cent of the total, are thus counted separately and not analysed in as much detail as the computerised claims. In particular, only the computerised claims are analysed by age and duration on a monthly basis.
7. Travel-to-Work areas (Table 15) are approximations to self-contained labour markets, i.e. areas where people both live and work.
8. NUTS (Nomenclature des Unités Territoriales Statistiques) (Table 16) was established by the Statistical Office of the

All data are not seasonally adjusted unless otherwise specified

European Union (Eurostat) to provide a uniform breakdown of territorial units for the production of regional statistics. NUTS is a five-level hierarchical classification.

9. The employee jobs series is based on data from employer surveys and is subject to sampling variability. The nature of the survey means that the size of this sampling variability may not be consistent from year to year. Provisionally ONS would expect that the 95 per cent confidence interval would on average be within +/- 6 per cent of the estimate. However, this will vary from region to region.
10. Labour market statistics are compiled from a wide range of sources. Claimant count and Jobcentre vacancy data are provided from the Jobcentre Plus administrative system, workforce jobs are derived from ONS business surveys, other data come from the ONS Labour Force Survey.
11. The Social and Vital Statistics Division of ONS carries out the questionnaire design, sample selection and interviewing for the LFS. Analysis and publication of the results of the survey is undertaken by Labour Market Division. In Northern Ireland, the Labour Force Survey is conducted by the Central Survey Unit.
12. In addition to the data in this release, ONS can provide a wide range of detailed labour market data in a number of formats. In particular, data are available from Nomis[®] at the same time as this release is published. Further data are also published in *Labour Market Trends (LMT)* and the *Labour Force Survey Quarterly Supplement to LMT*.
13. Datasets of selected series can also be viewed by choosing topics within the Labour Market theme on our website (<http://www.statistics.gov.uk/labour>).
14. Details of the policy governing the release of new data are available from the press office. Also available is a list of the names of those given pre-publication access to the contents of this release.
15. **National Statistics** are produced to high professional standards set out in the National Statistics Code of Practice. They undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference. © Crown Copyright 2004.

Relationship between columns: 2= 4+5 = 6+12; 6= 8+10; 12= 14+16.

* Denominator = all persons of working age.

** Denominator = Total economically active.

Labour Force Survey is tabulated by region of residence.

+ Quarter to quarter changes at regional level are particularly subject to sampling variability and should be interpreted in the context of changes over several quarters rather than in isolation.

The Labour Force Survey is a survey of the population in private households, student halls of residence and NHS accommodation.

Due to slight methodological differences between the way the national and regional LFS estimates have been interim adjusted for the 2001 Census, there may be small differences between the UK totals and the sum of the regional components.

Publication of these vacancy statistics has been deferred. Figures from May 2001 are affected by the introduction of Employer Direct - see note on page 7.

* Count of claimants of Jobseeker's Allowance

** Denominator = claimant count + workforce jobs. NB these are different from the proportions of the working age populations claiming Jobseeker's Allowance for local areas shown in Tables 17 and 18. See background note 5.

Months where there are 5 weeks between count dates. All the rest are 4 week periods.

Workforce jobs enquiries 01633 812318

The Workforce Jobs series measures jobs rather than people, therefore, second self-employment jobs (where the main job is an employee) are now included in this series.

Civilian Workforce Jobs figures come from a variety of sources. Employee Jobs (which is much the largest component of Civilian Workforce Jobs) come from quarterly surveys of employers carried out by Prices & Business Group (PBG) of ONS and Administrative Returns.

Self-employment jobs figures are provided by the LFS and Government-supported trainees figures are provided by ES Training Data Systems.

Source: Employer surveys

Workforce jobs enquiries 01633 812318

Employee jobs figures are of a measure of jobs rather than people. For example, if a person holds two jobs, each job will be counted in the employee jobs total.

Employees jobs figures come from quarterly surveys of employers carried out by Prices & Business Group (PBG) of ONS and Administrative returns.

The quarterly employer surveys used to compile employee jobs figures do not collect data by Government Office Regions (GOR). Instead, Annual Business Inquiry (ABI) data are used to pro-rate the totals obtained from the quarterly surveys to generate GOR data. This technique can lead to the sum of the industry figures not matching the "All jobs" total in column 2.

* Count of claimants of Jobseeker's Allowance

Source: Jobcentre Plus administrative system

Labour Market Statistics Helpline 020 7533 6094

Denominator = claimant count + workforce jobs. NB these are different from the proportions of the working age populations claiming Jobseeker's Allowance for local areas shown in Tables 17 and 18. See background note 5.

The claimant count inflows, standardised to a 4.33 week month but not seasonally adjusted, for May 2004 were 22,836 in total,

16,845 for men and 5,991 for women. The corresponding outflow figures were 19,682 men and 6,859 women.

** Flow figures are collected for 4 or 5 week periods between count dates; the figures are then converted to a standard 4 1/3 week month

Months where there are 5 weeks between count dates. All the rest are 4 week periods.

* Count of claimants of Jobseeker's Allowance

Source: Jobcentre Plus administrative system

Relationship between columns: 2= 3+4+5; 8= 9+10+11

Labour Market Statistics Helpline 020 7533 6094

Months where there are 5 weeks between count dates. All the rest are 4 week periods.

Only computerised claims are analysed by age and duration on a monthly basis. These figures therefore differ in total from those given in Table 7. The latter include clerically processed claims which currently amount to less than 1 per cent of the total claimant count. See background note 6.

* Count of claimants of Jobseeker's Allowance

Source: Jobcentre Plus administrative system

Relationship between columns: 14=15+16+17; 20=21+22=23

Labour Market Statistics Helpline 020 7533 6094

Months where there are 5 weeks between count dates. All the rest are 4 week periods.

Only computerised claims are analysed by age and duration on a monthly basis. These figures therefore differ in total from those given in Table 7. The latter include clerically processed claims which currently amount to less than 1 per cent of the total claimant count. See background note 6.

+ Official mid-2002 estimate of the resident population.

Labour Market Statistics Helpline 020 7533 6094

++ LFS data relate to the period March 2002 to February 2003. LFS sample covers working age (16-59/64) population living in private households, student halls of residence and NHS

accommodation. The LFS data in this table are consistent with population estimates released in February 2003, not the latest revised population estimates - see note on page 7.

+++ Unemployment rates calculated as percentage of 16+ economically active population.

Count of claimants of Jobseeker's Allowance. Average for January 2002 to December 2002.

Percentage of resident working age population of area. NB these are different from the national and regional claimant rates shown in Tables 1a, 7 and the summary of other headline indicators. See background note 5.

Labour demand includes jobs and vacancies - data on vacancies will be included here when they become available for local areas.

* Sample size too small for reliable estimate.

** Jobs data are for 2002, and are mainly employees from the Annual Business Inquiry which refers to December of each year; they also include self-employed, HM Forces and government-supported trainees. Jobs densities are calculated as the number of jobs per resident of working age (16-59/64).

Relationship between columns = 3=1+2; 9=7+8

Labour Market Statistics Helpline 020 7533 6094

[#] Percentages of resident working age population of area. The population denominators are based on output area data from the 2001 Census. NB these percentages are different from the national and regional claimant count rates shown in Tables 1a, 7 and the summary of other headline indicators. See background note 5.
