

Public sector finances June 2009

Date: 21 July 2009

Coverage: United Kingdom Theme: The Economy

Produced jointly with HM Treasury

Provisional estimates of the public finances show that in June the public sector had:

- a current budget deficit of £9.9 billion;
- net borrowing of £13.0 billion

and at the end of June:

- net debt was £798.8 billion, equivalent to 56.6 per cent of gross domestic product.

<i>Less</i>					
Depreciation	0.6	0.5	1.7	1.6	0.1
Net investment	2.8	2.2	8.4	6.3	2.1
Net borrowing	12.8	8.9	47.7	27.0	20.7

1. See table PSF3 for details of VAT and income tax
2. This definition of current receipts is the one used in HM Treasury publications and includes taxes on capital (Inheritance tax), which in ESA95 are in the capital account
3. Investment is capital formation, plus net acquisition of land, and net payments of investment grants, less sales of capital assets.

Central government current receipts

Central government current expenditure

Main Statistics

The main statistics released show, that in June 2009:

the **public sector current budget** was in **deficit** by **£9.9** billion; this is a **£4.1** billion **higher deficit** than in June 2008, when there was a **deficit** of **£5.8** billion;

public sector net borrowing was **£13.0** billion; this is **£5.5** billion **higher** net borrowing than in June 2008, when net borrowing was **£7.5** billion;

the **public sector net cash requirement** (see table PSF4) was **£19.0** billion, a **£7.6** billion **higher** net cash requirement than in June 2008, when there was a net cash requirement of **£11.4** billion. N.B. rather than looking at the cash measure, which can be misleading due to timing factors, it is better to look at the other, accruals-based, statistics

at the end of June 2009 **public sector net debt** was **£798.8** billion (equivalent to **56.6** per cent of GDP). This compares to **£641.4** billion (**44.4** per cent) as at the end of June 2008.

Public sector net debt (excluding financial sector intervention)

The most recent figures for public sector net debt (excluding financial sector intervention) are for June 2009, when net debt was **£657.5 billion (46.6 per cent of GDP)**

Financial year to date (April 2009 – June 2009):

Monthly data can be volatile, so it can be misleading to read too much into one month's data. The following paragraphs give information on the financial year to date and comparisons with the corresponding period of the previous financial year.

In financial year 2009/10:

the **public sector current budget** was in deficit by **£34.1** billion; this is a **£17.0** billion **higher** deficit than in the same period of 2008/09, when there was a deficit of **£17.1** billion;

public sector net borrowing was **£41.2** billion. This was a **£19.6** billion **higher** net borrowing than in the same period of 2008/09, when there was net borrowing of **£21.6** billion;

the **public sector net cash requirement** (see table PSF7) was **£42.8** billion; **£24.7** billion **higher** net cash requirement when compared with the same period of 2008/09 when there was a net cash requirement of **£18.1** billion.

Overall revisions

Since the last release there have been revisions from 2008/09 onwards. For 2008/09, both the public sector current budget deficit and public sector net borrowing have been revised down by £0.1 billion. For April and May 2009 the public sector current budget deficit has been revised down by £2.2 billion; net investment has been revised down by £0.1 billion, so that public sector net borrowing has been revised down by £2.3 billion. In addition, there have been minor revisions to public sector net debt as a percentage of GDP back to 2003/04, to take account of revised data for GDP published since the last Statistical Bulletin.

Financial sector intervention

The Lloyds Banking Group Placing and Compensatory Open Offer of ordinary shares to facilitate the redemption of preference shares held by HM Treasury affected the Public sector finances data for June 2009. The transactions affected the CGNCR but were neutral for the public sector as a whole. The net impact, including interest on the preference shares and fees, was to reduce the CGNCR by some £2.5 billion, of which £2.3 billion represents the net disposal of company securities.

Background notes

Financial support for the financial sector: classification issues

1. On 19 February, ONS announced the classification of Royal Bank of Scotland and Lloyds Banking Group as public corporations from 13 October 2008. Data for the two banking groups will be fully incorporated into the public sector finances as soon as is practicable, but they are large, complex organisations, and this may take some time.
2. On 19 March 2009, ONS announced its judgement that the Bank of England's Asset Purchase Facility Fund, which started operating in February, does not qualify as an institutional unit and that its activities should be classified with the sector that controls it. Most of the assets purchased during March and all of the assets purchased in April have been classified as central bank assets, whereas the purchases in February were recorded as central government transactions.
3. Other measures announced by the Government and Bank of England to support the banking industry include:
 - the Bank of England's Special Liquidity Scheme;
 - the Government's Credit guarantee scheme for new lending between banks; and
 - the Government's Asset Protection Scheme.
4. ONS follows its usual process when deciding on the classification of the institutions and transactions associated with these measures in the UK's National Accounts and Public Sector Finances. This includes consultation with Eurostat, the Statistical Office of the European Union, to ensure consistent interpretation of the international guidance. On 15 July 2009 Eurostat published their decision on deficit and debt - *The statistical recording of public interventions to support financial institutions and financial markets during the financial crisis*. The decision will have little impact on the published public sector finances. The guidance had already largely been anticipated, for example, in the recording of the recapitalisation of Royal Bank of Scotland Group plc, Lloyds TSB Group plc and HBOS plc. ONS will publish an article in the autumn explaining the recording of all UK interventions in the financial crisis.
5. Reaching robust classification decisions requires ONS to study a large volume of detailed information and legal documents. This can only begin once the arrangements have been finalised and the documentation is available. All this takes time. ONS will publish and explain the relevant classification decisions as soon as it is able to do so. The consequences of classification decisions will be carried through to monthly Public Sector Finances and quarterly National Accounts estimates as soon as the relevant data can be collected and checks undertaken that publication will not reveal confidential data on individual transactions and institutions.

Impact of financial sector interventions

6. At end-June 2009, the contribution to public sector net debt (PSND) from financial sector interventions amounted to £141.3bn. Northern Rock and Bradford & Bingley together accounted for £118bn of this difference. Compensation payments to depositors by the Financial Services Compensation Scheme and HM Treasury accounted for a further £9bn. The remainder represents the contribution to net debt from purchases by the Bank of England's Asset Purchase Facility Fund. Purchases by the Fund of liquid private sector assets and gilts broadly net off in PSND, so the impact is from the illiquid corporate bonds and the difference between nominal and market price of gilts purchased.

Summary Quality Report

7. A summary quality report for the public sector finances can be found at http://www.statistics.gov.uk/articles/nojournal/PSF_for%20web.pdf. This report describes in detail the intended uses of the statistics presented in this publication, their general quality and the methods used to produce them.

Definitions

8. A guide to monthly public sector finance statistics is available from http://www.statistics.gov.uk/downloads/theme_other/GSSMethodology_No_12_v2.pdf. It explains the concepts and measurement of the monthly data, plus those previously published, and gives some long runs of historical data. The following background notes explain the monthly data.
9. The current budget is defined as net saving plus receipts of capital taxes, using National Accounts concepts as set out in the *European System of Accounts 1995* (ESA95). For central government, monthly estimates of the current budget are obtained directly from data on transactions in current receipts and expenditures. For local government and public corporations, the current budget is obtained by subtracting net borrowing from an estimate of net investment. Net borrowing is consistent with the definitions in ESA95; procedures for calculating it are discussed in the methodological guide. It is the Government's preferred measure of the short term impact of fiscal policy on the economy. Net investment is defined as investment less depreciation. Investment is capital formation (acquisition of fixed assets, stocks and valuables net of any sales) plus net payments of capital grants.
10. Public sector net debt (PSND) is calculated as financial liabilities less liquid assets with both scored at face value. Liquid assets mainly comprise foreign exchange reserves and bank deposits. Public sector holdings of public sector debt are consolidated out. The public sector net cash requirement is, approximately, the flows equivalent of the PSND.
11. The GDP figure used to calculate the net debt ratio is the 'not seasonally adjusted' current price version. The GDP denominator for each debt ratio observation in the time series is the 12 months centred around the observation, e.g. six months before and six months after it. Hence, this requires estimates or forecasts of GDP to be available covering the period from six months before to six months after. This estimation procedure is explained in detail in an article, *The use of GDP in fiscal ratio statistics*, available at www.statistics.gov.uk/psa. As a result of this estimation procedure the debt ratio is provisional when first published and subject to later revision when outturn GDP first becomes available, and again when more refined estimates of GDP are published.

Relevance to users

12. The statistics provided in this bulletin include some of the fiscal aggregates used for assessing performance against the Government's fiscal rules. The Pre-Budget Report 2008 (PBR2008) published on 24 November 2008 (page 39) explains that: "the Government will depart temporarily from the fiscal rules until the global shocks have worked their way through the economy in full. Consistent with the Code for Fiscal Stability, the Government is setting a temporary operating rule: to set policies to improve the cyclically-adjusted current budget each year, once the economy emerges from the downturn, so it reaches balance and debt is falling as a proportion of GDP once the global shocks have worked their way through the economy in full." It also stated (page 53) that "while the public sector fiscal aggregates continue to be affected by interventions in the financial sector the Government will report on Public Sector Net Debt both including and excluding the impact of those interventions." The Economic and Fiscal Strategy Report 2009 (EFSR2009) published on 22 April 2009 (page 41) said "To ensure transparency in reporting on the impact of financial sector interventions on the public finances, the Government will publish information on three different bases:

- *including financial sector interventions on a National Accounts basis:* These measures reflect the treatment of financial sector interventions as determined by the national accounts, including temporary and exceptional effects from, for example, the inclusion of the balance sheets and operations of banks classified to the public sector;
- *excluding liabilities and unrealised losses from financial sector interventions:* These measures remove the temporary effects of financial sector interventions on the fiscal aggregates. As losses are realised for central government, and so can be reliably included in the fiscal projections, they will score in these measures; and
- *including unrealised losses on financial sector interventions:* These measures include the anticipated future loss stemming from the Government's financial sector interventions, and so are better measures of the sustainability of the medium-term fiscal position than those on the other two measurement bases. They remove the temporary effects of financial sector interventions on the fiscal aggregates."

Projections including a provisional estimate of future losses, *ie* on the third basis, were shown in the EFSR both for net borrowing and for net debt, but in this bulletin net borrowing is shown only on the first of these bases and net debt only on the first two. Net debt on the second basis is referred to as net debt excluding financial sector interventions throughout this bulletin.

13. *Budget 2009* gave the following forecasts for the financial year 2009/10:

- public sector current budget: a deficit of **£132 billion**;
- public sector net borrowing: **£175 billion**; and
- public sector net debt excluding financial sector interventions: **55.4** per cent of GDP at end March 2010

Coherence

14. The Public Sector Finances differ from other National Accounts data in that they have a more flexible revisions policy. The most up to date information is used in the PSF for all time periods and revisions can be included for all time periods in each bulletin. This means that the PSF data may be inconsistent with the published GDP data and sector and financial accounts, as a revision may not be incorporated into the main National Accounts data set until a later date due to the more restrictive revisions policy.
15. General government net borrowing reported in this bulletin forms the basis of the reports of Government Deficit under the Maastricht Treaty. This was most recently reported on in March 2009, <http://www.statistics.gov.uk/pdfdir/maast0309.pdf>. The definition of general government net borrowing to be reported for the Excessive Deficits Procedure is different to that used for National Accounts. A regulation requires that payments on *swaps* are treated as interest payments; for all other purposes, including the national accounts and the *Public Sector Finances Statistical Bulletin*, such payments are shown as financing items, consistent with ESA95. The definitions of the deficit also differ in the treatment of the government's receipts for allowing the use of spectrum by third generation mobile phone companies. UK interpretation of ESA95 is to treat these receipts as rents, whereas Eurostat requires that, for the Excessive Deficits Procedure, they are reported as the sale of assets.

Accuracy

16. **Central Government** departmental expenditure data are subject to various validation processes and improve over time. They go through four main stages:
 - stage 1 - initially, they are estimated using in-year reported data;
 - stage 2 - in the July following the completion of the financial year the *Public Expenditure Outturn White Paper* is published, which gives department's updates of full financial year estimates, but no in-year profile;
 - stage 3 - at the time of the autumn *Pre-Budget Report* these financial year estimates are updated;
 - stage 4 - at the time of the *Budget Report* the following year the *Public Expenditure Statistical Analyses* are published and the financial year estimates are further improved. The departmental accounts will have been audited by this stage.

Data up to and including 2007/08 are at stage 4.
Data for 2008/09 and 2009/10 are at stage 1.

17. The local government data for 2007/08 for English and Welsh local authorities are based on final outturns for receipts and expenditure, with Scottish local authority data being based on provisional outturns. Corresponding data for Northern Ireland, and **expenditure data for 2008/09 onwards are based on forecasts and are subject to revisions when outturn data become available.**

Revisions

18. Table PSF10R presents the latest revisions to key aggregates. The largest revisions normally occur in the month following first release, when estimated and provisional data are replaced with firmer information.
19. One indication of the reliability of the key indicators in this bulletin can be obtained by monitoring the size of revisions. The table below shows summary information on the size and direction of revisions from first publication to one year later. The average of five years worth of such revisions is shown (e.g. from those first published in **June** 2003 (for **May** 2003) to **May** 2008 first estimates). Please note that these indicators only report summary measures for revisions, the revised data may still be subject to measurement error.

	Latest monthly value	Revisions between first publication and estimate twelve months later	
		Average over the last five years	Average over the last five years (average absolute revision)
Current Budget, £m (ANMU)	-9,855	-236	1,169
Net borrowing, £m (-ANNX)	13,002	86	1,147
Net debt as a % of GDP (RUTO)	56.6	0.8	1.1

20. A statistical test is applied to the average revision to determine whether it is statistically significantly different from zero. An asterisk (*) is used to indicate if a mean revision has been found to be statistically significant. A spreadsheet giving these estimates and the calculations behind the averages in the tables is available on the National Statistics website at <http://www.statistics.gov.uk/StatBase/Prep/805.asp>. More information about the revisions material in this Bulletin can be found on the National Statistics website: <http://www.statistics.gov.uk/cci/article.asp?ID=793>

Publication policy

21. Complete runs of series in this Bulletin are available to download free of charge at <http://www.statistics.gov.uk/timeseries>. Alternatively, for low-cost tailored data call Online Services on 01329 444366 or email statbase@statistics.gov.uk. Data underlying the graphs in the Statistical Bulletin are available on request.
22. An electronic dataset is made available three working days after publication of the *Public Sector Finances Statistical Bulletin*. This contains quarterly data consistent with the latest *Public Sector Finances Statistical Bulletin*, analysed by economic category and sub-sector. The dataset is available at http://www.statistics.gov.uk/downloads/theme_economy/PSF_Supplementary_Data.xls
23. Details of the policy governing the release of new data are available from the National Statistics press office. Special arrangements apply to the public sector finances, which is produced jointly with HM

Treasury. A list of ministers and officials with pre-publication access to the contents of this bulletin is available on request. In addition some members of the Treasury's Public Sector Finances (PSF) team will have access to them at all stages, because they are involved in the compilation or quality assurance of the data, and some members of the Treasury's Communications team will see the bulletin, but only within the 24 hour pre-release period, because they place the data on the website.

24. **National Statistics** are produced to high professional standards set out in the National Statistics Code of Practice. They undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference. © Crown copyright 2009
