Revisions

Table 14R shows revisions to the main aggregates since the last Trade Statistical Bulletin of 9 October 2009. The revisions to trade in goods from July 2009 onwards reflect revised data from Her Majesty's Revenue and Customs and other data suppliers, revised estimates of trading associated with VAT MTIC fraud, later survey data on trade prices and a re-assessment of seasonal factors.

Background Notes

Introducing UK Trade statistics

Key issues specific to this release

1. The higher level of oil imports (see pages 2, 3, 4, and 7) in the third quarter of 2009 could be linked to increased refinery demand at a time when indigenous production is somewhat lower, as the UK continental shelf summer maintenance weather window extended into September.
2. There have been relatively large increases in both exports and imports of cars in the third quarter of 2009, compared to the second quarter of 2009 (see pages 2, 3, 4 and 6). It should be noted that exports and imports of cars were at relatively low levels in the second quarter. These increases may be linked to higher demand widely attributed to the introduction of car scrappage schemes in the UK and EU more generally.
3. For general issues regarding the interpretation of the series, please see the “Basis for the statistics” section below.

Basis for the statistics

4. A paper entitled *Statistics on Trade in Goods* (GSS Methodological Series No. 36) describing the basis on which trade in goods statistics are compiled and the methodology employed to derive volume and price indices is available on the National Statistics website: <http://www.statistics.gov.uk/StatBase/Product.asp?vlnk=14943>.
5. The Overseas Trade Statistics (OTS) data used as inputs to the release are collected and published by Her Majesty’s Revenue and Customs (HMRC) on an International Merchandise Trade Statistics (IMTS) basis.
6. The implied price deflators derived by comparing current to chained volume measures data are not the same as the price indices published in this release because the former are current weighted while the latter are base (2005) weighted.
7. The **volume** or constant price series are constructed by removing the effect of price changes from the value series.
8. Changes in trade associated with VAT MTIC fraud mean that comparisons of volume and prices (both including and excluding trade associated with VAT MTIC fraud) should be treated with a great deal of caution.

9. Monthly commodity movements for Food, drink and tobacco, Basic materials, Fuels other than oil, and Erratics (Ships, Aircraft, Precious stones, and Silver) are only detailed in this Statistical Bulletin where they are equal to or exceed £200 million (£400 million for three monthly comparisons).
10. Monthly country movements are only detailed in this Statistical Bulletin where they are equal to or exceed £200 million (£400 million for three monthly comparisons).

VAT Missing Trader Community (MTIC) fraud

11. Import figures for trade in goods include adjustments to allow for the impact of VAT MTIC fraud.
12. The adjustments to trade in goods relate only to part of the carousel version of VAT MTIC fraud. This fraud leads to under recording of imports as fraudsters import goods from the EU, which they then sell on before disappearing without paying VAT on that sale. The goods are eventually exported. Such exports are declared and are therefore already reflected in the UK's trade in goods statistics.
13. Changes to the pattern of trading associated with MTIC fraud can make it difficult to analyse trade by commodity group and by country as changes in the impact of activity associated with this fraud affect both imports and exports. However, the MTIC trade adjustments are added to the EU import estimates derived from Intrastat returns as it is this part of the trading chain that is not generally recorded. In particular, adjustments affect trade in capital goods and intermediate goods - these categories include mobile phones and computer components, which are still the most widely affected goods. International convention determines that the treatment of the impact is to adjust imports upwards by the relevant amounts of missing declarations (non-response). However, users may wish to interpret short term movements in exports and imports excluding that part of the fraudulent activity that is not included in the import estimates, and for this purpose an analysis of the export and import figures with the VAT MTIC adjustments excluded is shown in Tables 13.1 and 13.2.

Quality reporting

14. **Link to Summary Quality Report:** A Summary Quality Report for this Statistical Bulletin and associated data can be found on the National Statistics website at:
<http://www.statistics.gov.uk/CCI/article.asp?ID=1723>.
15. **Accuracy:** Trade in goods figures for the most recent months are provisional and subject to revision in the light of (a) late trader data, revisions to trade prices and revised estimates of

trading associated with VAT MTIC fraud, and (b) revisions to seasonal adjustment factors which are re-estimated every month.

16. Trade in services estimates have been derived from a number of monthly and quarterly sources. For components where no monthly data are available, estimates have been derived on the basis of recent trends. The results should be used with appropriate caution, as they are therefore likely to be less reliable than those for trade in goods. More details of the data sources, estimation methodology and reliability of the monthly estimates of trade in services were set out in *Economic Trends* (November 1996 and September 1997).
17. **Reliability:** Revisions to data provide one indication of the reliability of key indicators. The table below show summary information on the size and direction of the revisions which have been made to the data covering a five year period. A statistical test has been applied to the average revision to find out if it is statistically significantly different from zero. An asterisk (*) shows that the test is significant. An article explaining the past revisions performance for UK Trade statistics and what is being done to improve the first published estimates was published on 9 February 2005 at <http://www.statistics.gov.uk/cci/article.asp?id=1063>. The table covers estimates of UK trade first published from October 2003 (for August 2003) to September 2008 (July 2008). A spreadsheet giving these estimates and the calculations behind the averages in the table is available on the National Statistics website at <http://www.statistics.gov.uk/StatBase/Product.asp?vlnk=1119>.

An article analysing past revisions to quarterly balance of payments current account data was published in the May 2007 edition of *Economic & Labour Market Review*. It is available on the National Statistics website at:

18. **Coherence - EU enlargement and country coverage:** Two more countries joined the EU from 1 January 2007. These countries were Bulgaria and Romania. In addition, the coverage of EMU countries was extended to include Slovenia. In order to enable users to make long-run comparisons, data for the new definition EU and non-EU was produced from January 1998 onwards for value, and from January 1999 onwards for volume and price indices. At the same time data for the old definitions are no longer being maintained. There are additional series for country groupings on the old definitions. From January 2008, the coverage of EMU countries was extended to cover Cyprus and Malta, and from January 2009 the coverage of EMU countries has been extended to cover Slovakia. Some EU and non EU breakdowns of commodity data for Chained Volume Measures which are available from the Statbase® service may be less reliable than the current price data. Please consult Peter Gittins on 01633 455610 if you are considering using them.

Data have been combined for the United States and Puerto Rico, and for Dubai, Abu Dhabi, and Sharjah (the United Arab Emirates) from January 2009 onwards. Estimates are available for the United States and Dubai separately up till the end of 2008 on request.

19. **Coherence - classifications and definitions.** The Overseas Trade Statistics (OTS), on which the BoP trade data are based, have been compiled under the United Nations Standard International Trade Classification Revision 4 (SITC R4) from January 2007 but the data have been converted back to SITC R3 for this release and the Monthly Review of External Trade Statistics (MRETS) publication in order to help users to compare data over time. There are some discontinuities at detailed levels, particularly between capital and intermediate goods where some products are allocated from January 2007 to intermediate goods rather than capital goods as done previously. It is also possible that volume and price changes between 2006 and 2007 may be less reliable than for other periods.

20. **Notes on tables – rounding:** The sum of constituent items in tables may not always agree exactly with the totals shown due to rounding.

21. **Symbols**
